1. Help Needed with Tek 453 scope...

Newsgroup: rec.radio.amateur.misc
Date: 1999-10-01 00:00:00 UTC
From: dbutter@wireless.net
Message-ID: <37f4040c.578094274@news.mminternet.com>
Source record: 130399

Hi all,

I have an old Tektronix 453 oscilloscope that has a bad HV/Flyback
transformer and I have been having a tough time finding a replacement.
If anyone has a flyback for the Tek 453 or happens to know where I can
find one please let me know. Also, if anyone has a scrap 453 they
would be willing to sell for cheap, I would be very interested.

Thanks in advance!

Regards, Devin KD6DRS.

2. Occupied Bandwidth

Newsgroup: rec.radio.amateur.misc
Date: 1999-10-01 00:00:00 UTC
From: steve_holle@my-deja.com
Message-ID: <7t15dv$1up$1@nnrp1.deja.com>
Source record: 130400

Given an array of data consisting of power levels in dBm, such as is displayed on a spectrum analyzer, how can I calculate the 99% occupied bandwidth without converting the dBm to a linear scale. Currently, we are sliding a window the width of the channel spacing over the data and converting the data to power in mW and adding each converted data point in the window together (after conversion) to find the peak power window. Then we slice the smallest value on either end of the window until we get to the 99% level. This works but is EXTREMELY slow. I'm wondering if there is a way to find the occupied BW directly from the dBm values and skip the conversion to linear power.

Thanks for your help.

4. Auto Antenna's in Low Clearance?

Newsgroup: rec.radio.amateur.misc
Date: 1999-10-01 00:00:00 UTC
From: klausner@NOSPAMNOSPAM.frijoles.net
Message-ID: <37f43090.1481159@news.earthlink.net>
Source record: 130402
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.misc

I have two 1/4 wave (at 2 meters) spike antennas on the roof of my Ford Explorer. My new job requires that I park in an indoor garage (which I can use for free), where the clearance varies from adequate to much too low. Looking for other parking isn't economically practical, nor do I want to get out and raise/lower antennas several times a day. Sooner or later the antennas will scrape away.

Any suggestions?

Start copying arrl code practice and don't worry about trying to string sentences or even words at first. Just copy down anything you can identify immidiately and stick with it till the stuff starts to fall together into words and phrases. Start a ritual of at least 1 hour every day or two 30 or 40 minute sessions daily and just stick with it. If you do , you will get to 13 wpm sooner than later. If you put more time into it, you'll get there even faster. Goood Luck.

You and all the other doom sayers in this group are totally full of it. I have been involved with ham radio for only 5 years and EVERYPLACE I have lived ham radio has been polite, self regulated, and has provided useful public service. I am not trying to deny that there are a few of the types mentioned, BUT they are the minority. Of course the trouble makers get the publicity as in anything in this country. If we are going to take this approach then we should do away with the police (they are all on the take) do away with all politicians (they are ALL crooked) and ban all musicians (they are ALL dope addicts and sex fiends).

Hello,

I am inviting you to come visit http://hfradio.org - a site with many resources for Shortwave Radio and Utility Listeners, Ham Radio Hobbiests, and others who might be interested in this type of content.

So, come on by and check out my non-commercial SWLing/Ham Radio website. The URL is http://hfradio.org and features DX information, including QSL Route/Manager Lookups and Callbook Lookups; a Propagation Center including my eAlert service (allows you to sign up with your email address. Then the eAlert system will send you email propagation reports. I use this with my pager.); Equidistant Azimuth Map software (allows you to create maps of any QTH); Swap and Shop; Bookstore (I've hand-picked over a thousand book titles on radio, etc.); Free website space for YOU to create your own Ham or SWL site, and there's more. Easy to navigate. Open for suggestions.

If you feel up to it, after looking around the site, drop me a note (you'll find my address on the site) and share your thoughts.

73!

Absolutely correct and right on target. I've listened in on 3950
a few times when this slug was on the air. His mouth was ten times
more filthy than Big Al ever was on 3894.5! Racial slurs, multiple
connotations of the F-word and everything else in-between. Hopefully
this bonehead in N. Mex will get the message, but I somehow doubt it.

Why WARN anyone ? Do it and be dismissed.

TYPICAL DEMOCRATS.

Besides, he's only a worthless General who'll be given freebie locenses
in another 6 months, so he can ruin the bands the rest of us worked for
(barely).

It is possible that a typical cheap computer used to run HAARP might be
making the ham band area signals while experiments are running, not the
project itself. They were indeed there on the analyzer at Gakona,
however.

Hi, Don't know what spectrum analyzer you are using, but all modern spectrum analyzers have a button for the 99% power bandwidth. It sure takes the work out of the calculation. You probably want to use peak hold before making the measurement, especially if you are using digital modulation. To be honest I have been making this measurement for years and have never run into an analyzer that didn't have this (usually buried under a few layers of menus) soft key.

"IF the complaints continue?"

What the hell needs to be proven that already hasn't been? This guy is one of
ther worst offenders in the history of amateur radio. Malicious interference,
gross profanity, issuing threats against other amateurs, etc., etc., etc.

The case against K5-BLAB has already been proven. Let's see some justice
delivered.

Jimmy,
Try the HF bands, particularly 40 to 10 meters.

If it's any consolation, so-called old timers have the same problem on a trip out of their immediate area. Sometimes I don't even bother to take the rig along. HF mobile is a different story. It didn't used to be that way, and it isn't like that everywhere. Don't give up.

I should have explained this more clearly the first time.

HAARP was transmitting at 6.9 MHz (only) at approximately 900 kW. There were no harmonics transmitted.

The Spectrum Monitor (SM) receiving antenna (located close to the transmitter) picks up this single frequency, delivers the sample to the SM amplifier, an Anzac high performance module. The signal coming from this receiving antenna has a level of approximately 0.001watts. Because of this high signal level, the amplifier produces, internally, a spectrum of harmonics along with the original signal (eg., 6.9 MHz, 13.8 MHz, 20.7 MHz, etc.). This signal then goes to the spectrum analyzer, a Hewlett Packard HP-8560. The analyzer, in turn, samples the incoming RF sample, converts it to IEEE 488 compatible signals and delivers it to the computer and its processing software which produces the charts that you see on our website.

You can read a description of the SM system at the address:

http://www.haarp.alaska.edu/haarp/Monitor.html

>
> Perchance the graph isn't entirely accurate as to the frequency, hence
> the appearance ?

The graph is accurate. The graph displays the incorrect spectrum being produced by the overloaded spectrum analyzer.

When the Spectrum Monitor is being used for its primary purpose, to evaluate and confirm the purity of the output spectrum of the HAARP transmitter, we use attenuators and filters to ensure that the monitoring system is NOT overdriven. However this produces very *uninteresting* waterfall and NCDXF charts.

I hope I answered your question better this time. By the way, we have an e-mail account where you can send your technical questions. The account has been around since Feb 1995 and many folks use it. The address is:

askhaarp@itd.nrl.navy.mil

21. 10 Meter Intruders

Newsgroup: rec.radio.amateur.misc
Date: 1999-10-01 00:00:00 UTC
From: Frank <ve6cb@cadvision.com>
Message-ID: <37f4d8c9@news.cadvision.com>
Source record: 130419

I have posted here concerning the 10 meter intruders before, but the last couple of days I have had excellent results in chasing them off. The discussion of whether what I was doing was legal or not went on for days, but feel that jamming them is justified. I have also heard many other hams doing the same thing.

I have been hearing truckers, Gulf fishermen, business operations, and plain old CB skip. If more hams take time each day the band is open and send Morse, or key the mike we can clear the whole band. All I use is 100 W and a dipole. For the most part these people are just working local ground wave, and beyond a mile or so any healthy skip signal can take them out.

These people are, to put it politely, are not very bright and are so easy to spot with their overmodulated, overprocessed, speech (using AM, FM, and SSB) complete with those ridiculous "Roger beeps" and echo; not to mention the profanity and moron level conversations.

73,

Frank

Depends on what you want.

There are several brands of mobile antennas that have fold over whips that you can manually fold over. I use a Comet 2m/70cm that does that. There is also a model that is sort of like a rubber ducky antenna that will just bend over when it hits an object but they are not very effective.

There are a couple of manufactures who put out a automated fold over mount but I think those have all been trunk lip mounts.

I have been on the bottom of 10 everyday this week and have made some rather nice QSO's.
Lot's of good DX, Local, and FISTS CW going on.

Remember to play within the rules, when we are using our band allocation were not jamming.

Get in there and have fun!

> 50.073 but thats about it. Generally what mode should I be in AM, FM SSB? Is it
> better in the day or the night? Are there any web sites that may educate me?

Since you did hear some packet activity we'll assume the antenna is tuned and working. Have you tried to bring up any local repeaters with it? Check the repeater guide, set your PL if nessesary, make sure you have the correct offset and try to bring up 4 or 5 in the area. Many are out there but have low traffic. Do this in the FM mode obviously. Try calling CQ on 52.525 there are some who monitor that freq but you wont know unless you call. Also try 50.125 USB the SSB calling frequency. When 6m is open you'll hear plenty but when the band is closed the ONLY thing you'll hear is local FM repeaters or locals running SSB. 6m can open up to DX for 15min and then go dead again untill the following day or maybe open again later that day. It's a cool band but requires some patience.

I'd say your best bet for some immediate feedback would be try the local repeaters, they'll be there with or without a band opening. Remember though, 6m offsets are not always the same so double check as you program them in.

I heard one the other day complaining about the D.O.T. and using a "Roger Poot"
(fart sound) on 28.015. I feel pretty certain in assuming it wasn't a licensed
amateur operator.

This has been hashed around two or three times already but it begs the question Rick, If I'm operating on 40m and Radio Moscow comes up on 7225 shouldn't they QSY since the frequency is occupied? What if they're already transmitting is it illegal for me to work a couple Kc's away using a notch and IF filter to hear the other amateur station knowing that I'm jamming the radio Moscow transmission for some SWL down the road?

ke8hh@arrl.net wrote:

> ������ You're correct in saying that they aren't very bright--but how

I believe the question has been asked and answered by the FCC, if the interfering signal is not licenced to be there then your not jamming them.

Hi Fred...

Being a native Floridian, I've dealt with corrosion for many decades. I have had good luck with wrapping a rag or thin sponge around junction points, saturating the rag/sponge with either Marvel Mystery Oil or WD-40 (the MMO is less volatile and will work longer), then placing the item in full sunlight for a few days. You can also soak for a few days then use a hairdryer or heatgun to heat up the junction point before trying to pry apart.

I won't bore you with a recitation of the "siezed up and worthless" outboard motors, lawnmowers, tools, and antennas I have brought back to life this way in the past 40 years!

73s and good luck,

Jim (K4ZDZ)

You know when you hear English transmissions with a southern accent
using typical cb terms, or transmissions laced with "trucker type gutter
language", and no call signs ever given, down below 28.3 it is illegal
state-side cb operators. They stick out like a sore thumb from the ham
operators.

>
> The best bet when it comes to offensive signals is not to jam

And by ignoring them, they will just keep comming up to the 10 meter
band until it sounds just like 11 meters and hams won't be able to use
the band.

Some time back I spoke to FCC engineers at two monitoring stations about
these illegal operators, and their take was do what every you want to
jam them as since they are not licensed to operate on the band you are
not going to be accused of intereference.

Riley's Response to Liberty net letter

Date: Thu, 29 Jul 1999 22:22:31 -0400
From: "Riley Hollingsworth"
To: AlParkHam@aol.com
Cc: BCROSS@fcc.gov, LHICKMAN@fcc.gov
Subject: Re: A NEW WITNESS vs.YOUR "STAR" WITNESS FOR WA9KJI!
Mime-Version: 1.0
Content-Type: text/plain; charset=US-ASCII
Content-Transfer-Encoding: quoted-printable
Content-Disposition: inline

You know, Al, it's no wonder nobody at the FCC has wanted to do Amateur =
enforcement in the last ten years. I have a net here of whiners that want =
to be an International Broadcast Station on 3950, one of the most =
congested areas, and have it all to themselves, all the time, provoke =
everyone and use the frequency for anything in the world EXCEPT the basis =
and purpose of Amateur Radio and its allocated frequencies, and have the =
government run interference for them and provide a clear channel for them, =
ignoring the fact that frequencies are shared. I get mail from you all =
every day, and handling the "Liberty Net's (excuse me, "Great Liberty =
Net") problems would be a full time job. You rail every night about how =
bad the government is, but run to it every single day complaining, then =
constantly criticize and second guess everything we do. You remind me of =
the football cartoon, where the coach, finally tired of armchair advice =
and criticism, turn to the spectators and yells "You, in the brown jacket, =
go in for Number 42". All of you are starting to lose credibility with me. =
I have limited time, about 45 calls a day and =
about 125 e mails every day, and I need to move on to real problems of =
Amateur Radio being experienced by people who understand what it is for in =
the first place. Please do not contact me again.
>>> 07/10 4:00 PM >>>

** N2SAG's letter to Riley**
Mr. Hollingsworth,

By your recent actions in reversing the fortunes of WA9KJI and W1WCR =
you=20
have, in effect, labeled the many honest witnesses to the May 1st incident =
on=20
3.950 MHz as "LIARS". The ARRL report only mentions an affidavit. The=20
identity of the author of that false affidavit has been discussed openly =
on=20
the air. Considering the past co-violating activities of WA9KJI and =
your=20

witness we might have figured it out anyway. It now seems clear that you =
are=20
relying on the untruthful affidavit of a notorious violator to destroy =
a=20
truly decent Ham radio operator and institution.=20

Did you know that:

K5MVK has likely been jamming the "Liberty Net" with Morse code for =
several=20
years with a repetitious, "REPENT, REPENT, REPENT"?

K5MVK has openly and regularly maliciously interfered with the "Liberty =
Net"=20
and others on 3.950 MHz in concert with K5BLB in voice mode for at least =
one=20
year?

K5MVK wrote a letter to you condemning the music playing and jamming of =
K5BLB=20
and subsequently declared him a paragon of decency when he decided that =
he=20
was angry at BLB's antagonists?

K5MVK engages in nightly, illegal CW broadcasting on our about 3.950?

K5MVK has been WA9KJI's co-jammer on countless occasions, usually =
pretending=20
not to be able to hear preexisting QSO's?

Mr. Hollingsworth, the character of your witnesses matters. My sworn=20
affidavit will be an honest account of what happened on May 1st. I =
have=20
offered to appear in any court in any venue to testify that WA9KJI was=20
calling CQ over an ongoing QSO when control of 3.950 was legally transferre=
d=20
from W3KE and AA8DP to W1WCR and the net. I have never jammed, and =
never=20
knowingly involved myself with anyone engaging in such behavior. =20

Forgetting for a moment about May 1st., both you and Mr. Hickman know =
very=20
well that WA9KJI has been a notorious violator. His self-identified =
tape=20
playing, noise making, obscenity and slander are well known to the =
entire=20
amateur community. What does it say about the character of K5MVK that =
he=20
would be prone to associate with and defend such a notorious miscreant?=20

Ironically all that K5MVK has really done is admit that he momentarily =
joined=20
WA9KJI in jamming N3GVA and KR4LY (now N2BUB) earlier that evening. =

His=20
affidavit is in reality a confession of his own serious violation. His=20
testimony on behalf of David Castle is analogous to a criminal testifying=
=20
that his partner couldn't have been guilty of jaywalking because at the =
time=20
they were both engaged in robbing a bank!

A truly neutral party has come forward to clarify the events earlier in =
the=20
evening of May 1st. when K5MVK apparently joined WA9KJI in talking over =
an=20
established East Coast QSO for a period of time. This witness took=20
contemporaneous notes and heard WA9KJI verbally attack N3GVA and N2BUB =
when=20
he called CQ over them and was informed that the frequency was in use. =20
Shortly after that K5MVK engaged in his usual tactic of acknowledging =
Mr.=20
Castle in order to assist him in talking over an ongoing QSO between =
people=20
he dislikes.=20

Mr. Hollingsworth, if you are still really interested in hearing the truth =
in=20
more detail from a centrally located vantage point, please call: =
WD4CIA=20
WALTER H. PHILLIPS JR, 104 MEADOWPOINTE E, HENDERSONVILLE TN 37075, at=20
615-264-2758. He is not affiliated with any faction. My sense is that =
he=20
might actually give K5MVK the "benefit of the doubt" regarding direct=20
knowledge of the ongoing East Coast QSO due to band conditions. As I=20
understand Mr. Phillip's perceptions of the event there is no doubt =
however=20
that WA9KJI was well aware that the frequency was already in use. It is =
my=20
opinion that K5MVK's previous pattern suggests that he also knew.

73's,
AL PARKER

Jimmy, I couldn't agree with you more. I have had experiences similar to yours here in Lexington, Ky area. One of the local repeaters is only 3 miles from here, yet no one will talk to you here if they don't recognize your call. I bought a 2 meter rig last year, should have saved my money. Seems most of the stuff I hear up here is about like C.B. chatter anyway, plus we have people on the repeater who can't wait to bring up the SkyWarn net every time they see a flash of lightning. I would just use a C.B. when on the road as stupid as that may sound, you would probably have better luck in an emergency. I would recommend getting a higher class ticket and working 10 Meters, usually a lot of friendly people on 10. Good luck to you, don't judge all ham operators by what you hear on 2 Meters, or you will be sorely disappointed.

73,

Who's acknowledging them? and why would ignoring them put and end to the problem? They're not comming up above 28 Mc to talk to hams, there comming up to talk to their buddies where there is less interference. Please explain.

> You and all the other doom sayers in this group are totally full of
> it.

Well Howard, this "Doom Sayer" has some hard and interesting facts on his side. The fact IS that the number of amateur licensee's is dwindling at a rate of almost 2:1. This means for every 1 new license being issued, 2 are being removed from service. In addition, the next 10 years is expected to bring this ratio to a whopping 3:1. Why do you think that is so? And more importantly, how long do you think it will last before your ARRL dues is $5000 per member per year?

These dwindling numbers do NOT have anything to do with the Internet, Sony Play Stations, or Society as a whole because amateur license numbers started to diminish long before these "excuses" were prevalent. The causation for this regression is quite obvious. All one has to do is listen to a few bands on a Saturday night and the answers shine true like a sunny day.

My son just recently acquired his Tech license, and believe me, it didn't take long for him to realize that the only way for him to continue with the hobby, would be to find other hobbies to occupy the majority of his time.

When you get a chance, try listening with an objective mindset instead of a defensive one.

Jane...congratulations on your upgrade! I found that the tapes didnt help me much...I got one of the MFJ code tutors, with the LCD screen. I listened to it several times per day while commuting, and it got me there in no time! You can program it for whatever you want, and set it to stop when the screen is full, so you can check your copy.

Also, it has excellent random qso's. Cost is about $65.00 at hamfests. Also, it really helps to listen to ongoing qso's and copy both sides. When you get to about 75% copy, hunt for a faster speed. btw, use the farnsworth method!

40. Radio Amateur software for AMIGA ?

Newsgroup: rec.radio.amateur.misc
Date: 1999-10-02 00:00:00 UTC
From: Geert Pirens <geert.pirens@ping.be>
Message-ID: <7t3emvklq2@news3.Belgium.EU.net>
Source record: 130437
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.digital.misc,rec.radio.amateur.dx,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.amateur.space,tw.bbs.rec.radio.amateur,uk.radio.amateur

Hello,

I like to make a list about all available AMIGA software that is useble for
radio amateur purposes.
So if you now some name, a link on the net, a address where to buy or other?
Please let me now by mailing me.

I'll make the list vieweble for everyone at my homepage.

All information is welcome!

Thanks in advance.

Geert - ON1DQD

41. listing of HF nets?

Newsgroup: rec.radio.amateur.misc
Date: 1999-10-02 00:00:00 UTC
From: XmarkehX@dnai.com
Message-ID: <37f5523a.11161895@news3.dnai.com>
Source record: 130438

My apologies if this isn't the right group, or if the question has already been answered. I have been inactive for a number of years.

At one time, the ARRL (and possibly others) published a relatively long listing of on-air HF nets. Some were for DX, most for other reasons.

Is some type of listing still published? Even better, is there a fairly complete listing anywhere on the web??

Thanks for your help,

Mark
KM6FM

As usual, you're wrong. This has been discussed with the FCC on several ocassions (by myself and others on here); in their words, "It's impossible to interfere with an unauthorized transmission."

> The actions you describe above (transmitting a carrier, etc.)
>are illegal under Part 97. That you are performing them to stop someone
>else from illegal actions is irrelevant--you are _still_ violating the
>rules by doing so and could be fined or lose your license as a result.

Sending CQ with one's callsign on the same frequency as an illegal is not in violation of Part 97, as per the FCC. Call them yourself to confirm this.

> You make the assumption that these are not hams based on their
>language and behavior. In most cases you are probably correct. If,
>however, they _are_ hams you are deliberately interfering with their
>transmissions which in itself is a violation of Part 97.

No amateur callsigns are given by these operators; they are not hams. The FCC deems them as unauthorized operators, therefore (as per the FCC) no interference to them can possibly take place.

>also possible that many of the signals you are assuming are CB'ers are
>hams operating legally in their respective areas of the world who have
>different privileges than are granted to US amateurs in the 10m band.

Nice try. (I'm beginning to think that you don't have 10m capability! If you actually do, give the low end of 10 a listen.)

> The best bet when it comes to offensive signals is not to jam
>them but to ignore them and stick to operating within the limits of the
>rules and regulations. That way, if they are operating legally you will
>not be interfering with their communications and if they are not it will
>be them--not you--who ends up with the citation from the FCC.

The FCC has recommended that we protect our 10m spectrum from intruders by carrying on QSOs on frequencies in which intruders are found. Again, in their words: "It's impossible to interfere with an unauthorized transmission." Therefore, it is not intentional interference (it's not even deemed "interference").

Call them yourself if you don't believe that.

>Thanks
>John Manous

Hi John, I'm up in Poughkeepsie. 6 is dead as Kelsey's nuts most of
the time but does open from time to time. Just leave the rig on 52.525
and listen. Also call CQ once in a while. When it opens you'll know.
What I do is lmonitor 52.525 and if 6 opens I'll check down in the
side band portions. Also, listen to 10 meters, if it is really open 6
MAY be as well.

check out these sites for 6m:

FCC Issues Stern Warning to New Mexico Ham
NEWINGTON, CT, Sep 29, 1999--The FCC has fired a warning shot over the bow of
a New Mexico ham who has been the target of complaints. The Commission notified General licensee Sidney W. Mahan, K5BLB, of Estancia, New Mexico, on
September 15 that if the complaints about his operation continue, the FCC intends to designate his station license for a revocation hearing and his operator license for suspension for the rest of the license term, April 12, 2006.

Last November 18, the FCC had sent Mahan a Warning Notice concerning his operation on 3.950 MHz that allegedly involved tapes played on the air as well as sound effects and deliberate interference to other operators.

"We continue to receive complaints and monitoring information on the operation of your station, particularly regarding profanity, obscenity, broadcasting extreme racial slurs, deliberate interference and failure to properly identify," said FCC Adviser for Enforcement Riley Hollingsworth in the most recent FCC communication. In particular, Hollingsworth said, the complaints concerned alleged interference by Mahan to "a net that attempts to
operate around 3.950 MHz on Saturday evenings"--an apparent reference to The Liberty Net.

In his letter, Hollingsworth outlined and defined FCC prohibitions against the transmission of obscene or indecent material and advised Mahan that, for indecency purposes, the FCC treats amateur transmissions "the same as commercial broadcasts."

In addition to threatening to take K5BLB before an administrative law judge if the complaints continue, Hollingsworth said the FCC planned to forward tape recordings of K5BLB on August 13, 1999, on 3.950 MHz and would request "a full explanation for those radio transmissions." Mahan's reply, Hollingsworth said, "will be used to determine what action to take in this matter."

How would ignoring them do anything? They are not coming up on 10 just to agraviate hams. Most don't even know that they are on 10 meters or even know what 10 meters is. They think they have discovered some new frequencies they can operate away from the standard 40 channels and all the crap there, so ignoring them isn't going to make them go away. The only way they will go away is if they are made to realize that they are operating on frequencies where they are not legally allowed to operate and are not welcome and are going to be intereferred with when operating on 10 meters. Hope Hollingsworth can do something but don't expect much to happen soon.

It's impossible to "jam" an unauthorized transmission.

>It would be nice if they would get off their lazy tails and _enforce_
>the laws instead of relying on hams to do it for them.

How many agents (and how much funding) would it take to track down every unauthorized operator, collect evidence, file legal briefs, and all the other required actions in such cases? (Not to mention the passage of time for the exchange of NAL notices and responses to such notices). The FCC has the responsibility to oversee all wire and wireless communications and has to investigate interference to marine, air, and public safety band users. I suppose if they had some spare time, then they'd be able to focus on our very low priority problems; until that happens, we'll have to do what's within our legal power to combat intruders. Feel free to sit back and wag your finger while the rest of us attempt to discourage these illegals from using our assigned spectrum.

>>Call them yourself if you don't believe that.

>Oh, I believe it. It's so much easier than doing their own jobs.

Right. Sit back and let them take over all of 10m.

> Jamming them,

It's impossible to "jam" an unauthorized transmission.

>calling over top of them,

But in your last post, you were only against transmitting an
unidentified carrier on top of them. You change your opinion
like you change your socks.

>and other similar acts
>are simply demonstrating that hams know how to act like CB'ers!

Only in your mind. The radios these folks use don't always indicate
the frequency they're transmitting on; the users only know there are
40 "upper" and 40 "lower" channels. If they hear unusual activity such
as CW, RTTY, or data on these 40 "upper" channels, they'll realize
they're trespassing.

That we identify ourselves (which in turn holds us accountable for our
transmissions) means we're not in any way acting like CB'ers.

> The problem with that is they have a _lot_ more experience
>dealing with jammers than hams do--and unlike a ham, they see being
>jammed as a sign that they are annoying someone.

It's not possible to "jam" an unauthorized transmission.

>In other words, it
>_encourages_ the very behavior that the ham is seeking to discourage,

If they choose to remain on frequency, I have no trouble carrying on
a CW QSO over them. Data works fine over them, too.

>and it demonstrates that our only answer to poor operations is to
>operate poorly ourselves.

Your opinion. A legal QSO which happens to occur on the same
frequency as an unauthorized transmission is not "to operate poorly."

I suppose you consider the frequency of a ham's 20m harmonic from his 40m transmissions as one to avoid, too.

What do you do when a ham's key-clicks fill a band? Go QRT for fear of "jamming" his transmissions? ;)

Welcome to the Auxiliary Communications Service Newsletter, developed by the ACS Training Unit of the State of California Governor's Office of Emergency Services. Please visit our ACS Home Page at http://acs.oes.ca.gov

The purpose of this weekly newsletter is to bring those of us in emergency communications closer together by sharing common ideas, and by introducing new technology into the emergency services community. All individuals with an interest in emergency communications, disaster preparedness or helping the community at large are encouraged to participate here in an open forum.

You will find a virtual community here, with representatives from many different organizations with the same common goal: emergency response. We encourage everyone, from whatever organization you represent (or just yourself!) to bring us your ideas, suggestions, concerns, manuals, handbooks, or opinions so that we may share them with the group. To those of you who have just joined us, welcome aboard!

.....

Current Events:

Hams in Northern California continue to assist US Forest Service and state firefighters battling forest fires resulting from dry conditions. Plumas County RACES has been with three fires and is going on three weeks of continuous duty with just one day off. ''We are still working with the Forest Service at the Fire Information Center at the Plumas County Fairgrounds in Quincy,'' said Bonnie van Bergen, KE6POO, who is among a group of RACES members on the scene. Among them is her husband, Chief RACES Officer Van van Bergen, WD6FGB. Quincy is located in Northern California west of Reno, Nevada, near the Plumas National Forest.

Earlier this week, the US Forest Service was mopping up the Bucks, Pidgeon, and Lookout fires. The Bucks fire alone burned more than 35,000 acres and was reported not yet totally contained as of Friday, September 17.

Besides praising the hams for their help in keeping open the lines of communication in difficult terrain, the Forest Service also credited hams with helping to save the life of a

firefighter. During the Bucks Fire on September 4, the firefighter received multiple bee stings and went into anaphylactic shock. Firefighter Jim Monty, N6DVR, who was with the injured firefighter at the time, administered epinephrine and unsuccessfully tried to call for help on a hand-held radio and a cellular telephone. Monty, the Fire Marshal for the Manteca-Lathrop Rural Fire Protection District, then switched to the amateur repeater frequency - 145.47 MHz - that he'd thought to program into his fire radio. Back at the Fire Information Center, the van Bergens heard the transmission and relayed the message. A rescue helicopter was dispatched promptly to transport the victim to the hospital.

''It is quite possible that the radio operators helped save this firefighter's life,'' the US Forest Service report said. ''Special thanks to Jim and the eight RACES hams who have volunteered so many hours and helped fill the holes in our communications network.''

Late last week, hams in the Shasta Dam area of Northern California wound up their support of fire fighting efforts there, according to Sacramento Valley Section Emergency Coordinator Jerry Boyd, K6BZ. ''A couple more fires broke out, and we still have temperatures near 100 with no break in sight, so we could be back,'' he said earlier this week.

Amateurs had been assisting the California Division of Forestry/Fire Protection with communications in the affected counties. Chief fire officers were ''shadowed'' by hams to insure they had communications capabilities. Fire emergency command and control centers used hams as did evacuation centers in several jurisdictions.

Boyd reports that more than 200 federal, state, and local firefighters worked the High Fire north of Shasta Lake and the Mammoth Fire west of Shasta lake with the help of National Guard helicopters and C-130 tankers.

Boyd reports that 86 ARES members from Siskiyou, Shasta, Tehama and Butte counties assisted the firefighters.

At one point, more than 400 separate fires were raging in Northern California. The latest fires were a result of thunderstorms producing what's called ''dry lightning'' with numerous ground strikes and no rain to stop the fires the lightning started.

Great work!

Thanks to Jerry Boyd, K6BZ, Ev Gracey, WA6CBS, and Bonnie van Bergen, KE6POO .....

This week's EMCOMM Bulletin:

EMC203 State EMCOM Unit Funding 3/3
To: Emergency Communications Units - Information Bulletin
To: Emergency Management Agencies via Internet and Radio
By: Auxiliary Communications Service (ACS) of the
California Governor's Office of Emergency Services

EMC203 State EMCOM Unit Funding 3/3 For release 9/27/99

E. ANALYSIS OF ALL FEASIBLE ALTERNATIVES

Alternative 1: Fund $96,000 communications requirements which
were then listed in this format:
- Table: Quantity, Description, $$ Cost estimate; then a
- Narrative, perhaps like this: "this will bring the unit
to full operational capacity, replacing.....as well as preparing
for the improbable, but possible, communications failure that
could occur. Essential readiness for a worse case scenario is
good planning."

Alternative 2: Do not support the ACS program with the
requested funds. (Say it bluntly if necessary, but be accurate.)
- This will mean the unit cannot function as is expected.
- Unfortunately, this alternative will clearly convey the
message to the ACS participants that the agency does NOT consider
their service to be beneficial. It would effectively assure the
death of ACS operations and would be contrary to......." (Here
include a statements of a key executive figure as to the value
of the unit to the State, etc., I.E.,., quote the Governor, the
Director, etc.) (Remember, somewhere in the chain of financial/
fiscal approval this document will likely be read by those who
know nothing about your program. So you have to cover
essential 'marketing' whys!!)

Alternative 3:
- a. Fund communications requirements for $96,000 (see table
under Alternative 1).
- b. Provide and fund an annual budget of $xxxxxxx for ACS
training, travel, upgrades, repairs, maintenance and parts.
- Summarize, possibly like this:

This would achieve the benefits of Alternative 1, and also provide training, travel and education for the ACS program and its participants, AS WELL as the education of OES staff as to ACS capabilities. (Describe why the program is vital, what it can do.)

Alternative 4: Fund a portion of the communications requirements.
- Be candid, call the shots as you see it. You might write: While this may be tempting, it will leave those doing the funding with the belief that they have done their job when, in fact, it will leave the unit short of Today's needs for effective communications.

Alternative 5: Hire the needed persons and rent the equipment when needed.
- In some cases this may be a viable option. Write what is true. Say it will not work if that is true. Or write: even if it were available it would be too late to even attempt it once the emergency has occurred, or the disaster struck. Also, as to the use of Amateur Radio, it is illegal to hire, or pay, persons to operate on those frequencies."

TIMETABLE: Customized to local needs

RECOMMENDATION: Support the alternative you want. Be clear and concise. (We chose to support Number 3.)

Obviously the procedure varies by jurisdiction, state and agency. This is an example only. It is our hope this casts light on the process of state-level funding for units directly supporting their state. Other states, with different circumstances, are asked to write their processes for distribution in these EMCOMM Bulletins. To do so:
- Submit suggestions, topics or comments on the bulletins to cary.mangum@macnexus.org or cary_mangum@oes.ca.gov
Series end.

To subscribe to bulletins, use the Subscription Services web page at <http://acs.oes.ca.gov/subscribe.html>. If you don't have web access, just send an e-mail message to <mailto:emcomm-bulletin-sub@harthaven.com>.

Bulletins are on the ACS Web page: http://acs.oes.ca.gov -and a Landline BBS: 916-262-0856 (graphical & standard interface); and a FTP Archive: ftp.ucsd.edu/hamradio/races

.....

Please let others in the emergency services field know of the newsletter, and encourage them to join... If you have opinions, suggestions or written material that you'd like to share with the group, let us know. We're always looking for new ideas and suggestions that will benefit everyone.

See you next week!

Perhaps I am wrong in saying that ignoring them will solve the problem, but making them feel unwelcomed just might make some of them go away, or fear of getting busted by the FCC may make them go away if indeed we can get enforcement on 10 meters sometime in the near future. C.B.ers have been operating on "outband" frequencies above Channel 40 on C.B. for years to try to get away from the skip interference, and no one really seemed to care as long as they weren't interfering with amateurs on 10 Meters, but the problem has gotten worse in recent years, probably because of the availability now of more 10 meter mobile rigs and C.B.s that can be easily modified. Here's one example I had about 6 years ago. One night I was on 10 Meters and heard a guy that I just assumed was a local ham. He came back to me and gave me some kind of bullshit made-up call that didn't even sound close to being legit. When I called him on it he just laughed and said, "well I better get off of here." I told him that was probably a wise decision. If we do all illegal C.B.ers who drift onto 10 Meters like I did this guy, it might help some, but it won't totally eliminate the problem. What do you guys think?

Depending on what you want to spend, Outbacker makes a ground plane kit for their antennas. I don't know how well this would work on a balcony unless you could ground the radio to a cold water pipe or something, but it would be worth a try. I am getting ready to move to a new apartment and was thinking about ordering this antenna when I get a little more money going for me and just putting it on the porch and working CW so I don't tear up anyone's phone or t.v.

57. List of the rec.radio newsgroups

Newsgroup: rec.radio.amateur.misc
Date: 1999-10-02 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <7t475v$n45$1@news.hawaii.edu>
Source record: 130454
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate audience, below is a list of the rec.radio newsgroups. In most cases, a group's name will explain its purpose. Cross-posting should rarely be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-running thread results from a single cross-posted article, and its content drifts further and further away from being "on-topic" in the various NGs which receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups" posted on the 15th of each month.

Jeffrey Herman, KH6O
(rec.radio.amateur working-group)

Oh good grief!! Do you think the FCC is going to come knocking on your door the minute you tell some cber to get off the band. They aren't even going after the cbers for operating illegally in the 10 meter band, why do you think they would go after some ham for trying to run them off. Get real!!

Btw just where in part 97 is it made against the rules to communcate
with a station in an effort to determine wether it is a legal station.
it is explictetly premitted to engage even in short one way
transmission in an effort to establish two way contact. I also see no
exclusion against such a contact if you are operating withing the
rules of the ars. I have read part 97 thoughaly, and I see no such
provision. OTH to set out to do so repatedly on an ongoing basis would
be a violation of the rules clearlybut a short qso in which you seek
to establish the legality and validity of the contact seems quite
legal In addition I'll in passing that it would not be legal for a
Ham station to seek to jam such an intruduing CBer and thus if we
might have to move such a freq and complain to the FCC (and wait and
see if does any good)

For those of you having a particular problem with the Ft-2600, and its mic element hot all the time, allowing the thing to think it is hearing DTMF tones....well, go to menu 17, and lock out the keypad! That should end the problem.

Bill

Not only that, but you could technically talk to them for 9 min and 50 seconds before you make the determination they are NOT a ham station, I'm not one to use my call with each and every transmission I've answered several stations calling CQ with "Hi how are you, my name is Tim" and pick up the QSO (drives a lot of stations crazy) from there identifying my station a few minutes later. So I can't see how you would be in violation talking to another station until he fails to identify within 10 min. But of course this is all just conversation I can't imagine, based on the FCC's current status that anyone would ever get a pink slip for talking to a station they didn't know was not licensed. If he bootlegged a call there is no way you could reasonably know.

The CB'ers move there because the band is free of QRM, there isn't much that will ever be done about the Mexican stations there but we can certainly hold our ground with the stateside stations.

Tim ka8ddz

Cross-posted to: alt.ham-radio.packet,alt.radio.amateur.club.taparc,rec.radio.amateur.antenna,rec.radio.amateur.digital,rec.radio.amateur.digital.misc,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.amateur.space

The De9 plug is the interface to the radio.
Pin1 is tx audio to your radio
Pin 3 is PTT for the radio
Pin 5 is receive audio from the radio.
Pin 6 is ground to the radio

The round coaxial plug uses anything from 6V or so above. Common is
12V.

The DB25 female jack is the same as an external modem. I use a
external modem cable to conenct to the KPC3.

If using comm 1, which on my PC is a DE9, then a external modem cable
is in order. If you need pin outs, let me know and I'll send them.

If using comm 2 , which on my PC is a DB25, then the external modem
cable is a db25 to db 25 "straight thru" cable, where pin 1 goes to
pin 1, pin 2 to 2 etc.

Well you can set around and listen to the cbers on 10 and do nothing,
but I interfer with them anyway I can. I guess you think the cbers are
going to say "oh golly gee, look, these hams are obeying the rules and
not interfering with us, so lets follow this goody example and return to
the cb band so we can operate according to the rules too." Yea right.
Like I said, get real.

They don't care about the FCC. Most of the idiot drivers I hear sporting echo
boxes and roger farts probably don't even know there IS an FCC.

>C.B.ers have
>been operating on "outband" frequencies above Channel 40 on C.B. for
>years to try to get away from the skip interference, and no one really
>seemed to care as long as they weren't interfering with amateurs on 10
>Meters, but the problem has gotten worse in recent years, probably
>because of the availability now of more 10 meter mobile rigs and C.B.s
>that can be easily modified.

And because the "freeband" is now full of Spanish on most days. They just keep
turning the channel indicator and flipping switches until they find a clear
frequency. They don't know or care if they're above 28Mhz. Most of them don't
even have a frequency readout on their radios. All they know is "Channel 32,
Band F", or whatever.

Summary: most of these guys aren't purposely bootlegging on 10 meters. They
just end up in the lower part of 10 because it's where they first find a clear
frequency.
Be firm but nice if you ask them to go elsewhere.

Greetings fellow radio amateurs,

The LPWS now has what we believe is a comprehensive listing
of ALL packet radio BBSs in the UK, as well as ALL DX
Clusters. Not only a listing, but the licensees call-sign
AND a link to a map showing the exact location of the
station to within a few metres.

Please check it out @ http://www.laughingpoliceman.com
OR go directly to the page that interests you BBS here
http://www.laughingpoliceman.com/bbs_list.htm

Packet Cluster here
http://www.laughingpoliceman.com/dx_cluster.htm

If there are any omissions or amendments, please email them
to me, g8aso@hotmail.com

Thanks

74. Ethernet/LAN RFI problems?

Newsgroup: rec.radio.amateur.misc
Date: 1999-10-02 00:00:00 UTC
From: XmarkehX@dnai.com
Message-ID: <37f67ad9.87107632@news3.dnai.com>
Source record: 130471
Cross-posted to: rec.radio.amateur.misc,alt.ham-radio.hf

I am re-setting up my station, after several years off the air.

One difference between then and now is that in my home I have a 10bt ethernet lan connecting several computers over several rooms - using CAT-5 UTP cable. Also a hub, and an ISDN Router.

These seem like likely targets to either generate RFI, or be effected by RF.

Anyone have any experience with this??

Thnx,

Mark

>they are operating in an illegal band!

They know they are operating illegally, yes. But they don't know they're in a
ham band. In most cases, they make no designation between 27.999-28.000Mhz.
They either don't know the band limits, don't have display of the band limits,
or (usually) both.

Yes, that's just what it is, verbosa, with NO substance.
It's a pity that some have actually no life whatsoever
apart from ham radio to go and generate a fake letter allegedly
written from an FCC official, then post it on the internet.
What is even more amazing is some people actually fell
for this BS stunt, concocted by a certain person who is
well known for being an interloper and a troublemaker
on HF radio for several years on 14.313

You've took the bait and bought goldbricks.

>discussed) is a violation of the rules and regulations.

There is no requirement that you know the license class of the other
station. therefore the rest of the stuff is GIGO. you are not required
to establish the license class of the other station. I can not find
find such a requirement in part 97. your logic would make it
violation for example also to advise a of frequency Marine unit of
it's status. The provison for ermegency communications would seem to
cover both the lost CBer and the lost marine unit, since if by a short
QSO you can back where they belong you do aid the cause of ermgency
traffic. in addition I recall a section that No provision fo the rules
shall be construed as forbitding communcation that are in the interest
of public safety. mantianing the bands form unauthorized users would
seem to support this goal

KK7HO wrote in message <19991003001049.15499.00000061@ng-cf1.aol.com>...
>I suggest that you read it also. it wasn't concerning jamming, it was
language.
>Get the facts straight.

THE FCC vs. K5BLB

The FCC says that a New Mexico ham could loose his license for a variety of
alleged offenses. In a case with what
some are already claiming to be filled constitutional overtones, the FCC
says that Sidney Mahan, K5BLB, kept
interfering with other hams while using the wrong kind of language on the
air. Now it may want Mahan off the air
for good. Newsline's Paul Courson, WA3VJB, has more from Washington:

At first glance it looks like a simple crackdown on somebody using dirty
language on the ham bands. But the FCC
is apparently determined to use this case a broad guideline restricting the
content of amateur conversations that
some may consider profane.

The target of the enforcement action is Sidney Mahan, K5BLB, of New Mexico,
who allegedly has interfered with
hams participating in the controversial Liberty Net on 75 meters. The FCC
notified Mahan in recent days that it
may put his station license up for review at a revocation hearing. The
agency also says that it may suspend his
operators license for the remainder of its term.

Mahan allegedly ignored an earlier warning from the FCC to change his style
of operation and conform with all of
the FCC's rules governing the Amateur Radio service. The warning from
November of last year cited questionable
activities linked to Mahan operating on 75 meters, at around 3.950 MHz.

The warning letter suggested that Mahan was causing deliberate interference
by making transmissions which
included audio recordings and sound effects. Regulators say that here it is
nearly a year later and enforcement
staff continue to get complaints about activity allegedly coming from Mahan
and his K5BLB.

The agency cited the use of profanity, obscenity, broadcasting extreme
racial slurs, deliberate interference and
failure to properly identify. Content issues get an unusual amount of

emphasis in this latest letter to Mahan from
the FCC. The agency suggests that Mahan may not understand the Commission's enforcement of a ban on
obscene or indecent transmissions as it may apply to the Amateur Radio service.

The letter presents the FCC's opinion on the legal definition of obscene, indecent or profane language and cites a
federal statute to back its claim that such material is outlawed on ham radio or anywhere else on the airwaves.
The statute is Title 18, Section 1464, of the U.S. Code of Federal Regulations.

FCC representatives have long suggested verbally that regulations from one service can be applied to any other
service, but this is thought to be one of the first times that the FCC has taken the obscenity statute --
traditionally applied to broadcasters -- as part of an enforcement action against the Amateur community.

By inference, the letter suggests that if it can't be said on television or by radio's Howard Stern, it can't be said
by a ham radio operator either.

The enforcement structure of designating a license for a revocation hearing is the same process used when the
FCC moves against a licensed broadcaster. Only this time the call letters are K5BLB.

Regulators say that they have notified Mahan that they will be sending him some tape recordings made last month
of on-the-air reception for his review. The recordings allegedly capture Mahan questionable operating. He is
supposed to explain just what he is doing as heard on the tapes. Depending on his explanation the FCC will them
move ahead to settle or prosecute its enforcement action against him.

>The trouble with jamming illegal operators

It's impossible to "jam" an unauthorized transmission (FCC's words).

>is that you also create chaos for the LEGAL operators.

How does carrying on a legal QSO with another amateur on these frequencies (e.g., 28005, 28015, 28025, et cetera) "create chaos" for other hams? Those who wait for the FCC to do something will just avoid (hide from) such frequencies anyway. OTOH we are using them in a legal manner; it's incredible that you're able to find fault in that. I await your explanation.

hello jim, I couldn't agree with you more, I have had the same problem here
in rhode island. I thought hams were supposed to be helpful to new hams??
This is not the case, unless you have a n or w prefix your a nobody .
these people give you no incentive to upgrade licence because it just gets
worse on HF . very dissapointed , Norm.

No need to "talk to" such an individual; one can talk *at* him, as in
"Calling CQ CQ CQ on this frequency which is authorized only for
amateur radio communications..." (This supposes the illegal came
up on an amateur phone frequency.)

You create chaos for legal operators because you encourage others to jam frequencies by throwing dead AM carriers, keying up CW keys and throwing tones, etc. Anyone who knows anything about how radio works knows AM occupies more bandwith than SSB, thus you tie up more spectrum space and more frequencies. What if everyone jammed every illegal operator on 10 meters? The whole freakin band would be occupied by jammers and dead AM carriers, is that what we really want? If the FCC doesn't step in and do something soon, 10 Meters will end up just like C.B. Is that what we really want? Just my take on this.

Don't know 'bout free downloads but you can buy Travelplus from the ARRL.
does most of what you want. The mapping isn't that sophisticated though. Has
built in map and you can select a radius around a point (can center on
lat/lon) but won't zoom in or anything. It has the ARRL repeater directory
built in. It's on CDROM

Again, it's impossible to "jam" an unauthorized transmission (FCC's words.) We need to tattoo that on the inside of your eye lids.

>by throwing dead AM carriers, keying up CW keys and throwing
>tones, etc.

I participate in legal CW QSOs with other hams; our frequencies happen to coincide with those of illegal operators. We do not throw dead carriers or transmit tones. You're making up stuff again. Bad boy.

>What if everyone jammed every illegal operator on 10 meters?

It's impossible to "jam" an unauthorized transmission. (Say that 100 times as you're drifting off to sleep tonight.)

Jimmy, I noticed that you commented on how much you called, but not on how many times you responded to calls yourself.

When I first got into ham radio, very few would answer my calls either. So I simply switched directions. I set my radio up to scan all the local repeaters and simplex frequencies. I listened for every unanswered call. And I answered those calls. Within a few weeks, I knew many people on the radio. And my calls very seldom went unanswered after that.

I've tried this system in four different cities (yes, I've traveled that much in the last few years), and this system has worked in all four. So I see no reason that it will not work for you.

I do agree though that many people are hesitant to answer a call on the VHF/UHF bands. I don't think this has anything to do with the caller. I realise this may be simplistic, but after talking to a lot of people, I'm convinced that most are just "gun-shy."

There are a lot of rules for ham radio (both real rules and non-official etiquette rules). And many new operators, and even a few seasoned operators, are very wary of breaking those rules (even to the point of avoiding the radio altogether).

And they're also concerned that they will embarrass themselves by sounding like a rank amateur on the radio. This is especially true for the beginning ham, since he obviously is a rank amateur on the radio.

So, in the end, to avoid either of these situations, they restrict themselves to talking only to friends they know well (such as a person they know off the radio, or even a family member).

Many of these people will eventually put out a call on the radio. In some case, they will get a lecture on the mistakes they made, and will never try that again. In other cases, no one will respond, they'll think it is their fault (a mistake they made), and will never try that again.

And, in still other cases, they'll get a good operator that will not stick his nose up at the new ham, will not lecture on every little mistake made, will not try to impress him with their superior knowledge or equipment, will make an effort to listen to the new operator (not just talk), and that new ham will go on to be a person enthused about this hobby.

You can be that good operator, Jimmy. All you have to do is start answering those unanswered calls. Take care.

You have seen the ham radio that exists today. There are exceptions, but
they are ONLY EXCEPTIONS.

Welcome to ham radio-set your watch back 40 years

Please visit my World Wide Web Site, you have never seen a page like it.
You will see:

1. How to pass the A+ Certification
2. Really interesting answering machine messages
3. A blond naked chic being held by a female ham!.
4. How you know you are a ham.
5. Hear Ted Kennedy really screw up in front of Clinton
6. Actually sounds of Bill Clinton "after the lov'in".
7. The writings of me and others on ham radio, hear a typical ham contact.
8. The warm side of K1OIK, hear me speak, see me with famous people.
9. An amazing card game that will shock others
10. Pictures of me and my family.
11. Did common German's enable the holocaust?
12. See now the future of ham radio.

Burt Fisher

Now that Rich, Al, Sid, Glen Baxter and other assorted white trash have been removed from the air, I may end my boycott of the 75 meter band. Thank god the FCC finally woke up. Even rich's call, WB2OTK, is no longer in the FCC database. Now they need to work on Polly Parrot and some other trouble makers.

Last night, the Liberty Net ran without any illegal jamming for better than two hours. This was refreshing, to say the least. K5-BLAB in particular was very "reserved" in his behavior last night. Guess Riley finally got his point across to him.

>terminology.

From the definitions contained CFR Title 47, these guys do not fit into the category of "signal" or "transmission." In the eyes of our government, they're no different than static crashes or harmonics. And just like it's not possible to jam static crashes, it's not possible to jam illegals. Luckily, we answer only to the FCC, not KE8HH.

> If you prefer to call it by another name, call it acting like a
>lid instead. That's _much_ more generic.

Right. Just like transmitting on top of a 20m harmonic originating from a ham's 40m transmission is "acting like a lid."

>>I participate in legal CW QSOs with other hams; our frequencies happen
>>to coincide with those of illegal operators. We do not throw dead
>>carriers or transmit tones. You're making up stuff again. Bad boy.

I am not responsible for my brethren's actions.

> Even transmitting over them encourages them to "fight back." Is
>that _really_ what you want--or do you want them to simply "go away?"

Fight back in what way? If an illegal remains on frequency, it doesn't bother my CW QSO at all. In all my experiences with this matter, there is no fighting back; the illegal simply goes QRT. You apparently have no experience in these situations -- you can only speculate, and as usual, your speculations are incorrect.

>>It's impossible to "jam" an unauthorized transmission. (Say that 100
>>times as you're drifting off to sleep tonight.)

> So read jam to mean act like a lid instead.

Whatever. Feel free to sit back and wag your finger while many of us attempt to protect the lower end of 10m.

Some feel compelled to take action to right observed wrongs, while other run for cover and hide. We know which category you fall into. =:o

(I once witnessed a purse-snatching -- I gave chase and caught the suspect, and turned him over to the police. From your comments regarding amplifiers and illegal operators, we know you would have just stood there like a coward and only complained, "There is never a cop around when a crime is committed!")

>
>An 11M-capable amp is not illegal for me to own or use, so long as I
>use it within the ham bands.

True, in part. We'll use your "or any hobbiest" instead of referring
specifically to "you," since you're licensed:

Title 47 - Telecommunication
Chapter I - Federal Communications Commission
Part 95 - Personal Radio Services
Subpart D - Rules for CB Service
Revised as of October 1, 1996

Rule 11 - Linear Amplifiers

{C} The FCC will presume you have used a linear or other external [RF] power
amplifier if-
[1] It is in your possession or on your premises; and
[2] There is OTHER EVIDENCE that you have operated your CB station with
more power than allowed by CB Rule 10.

So if evidence exists that you've ran as little as 5 watts output in
AM or 13 watts output in SSB, "The FCC will presume you have used a
linear...if it is in your possession or on your premises..."

Ohio/Penn DX Bulletin No. 429

The Ohio/Penn DX PacketCluster
DX Bulletin No. 429
BID: $OPDX.429
October 4, 1999
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, W1LU, WB2RAJ/WB2YQH & The 59(9) DXReport, W3UR & The Daily DX, W4WX, N5FG, W5FI, K8PYD, K8YSE, K9MIF, Antonio Bosso, DF7ZS, DJ5AV & DX News Letter, EA4ABW, EA5GMI, G3SWH, G0IAS, G0PSE, HK3TAS, JI3DST, LU9AY, ON6TT/5X1T, SM0DJZ, SM0BFJ, SV1ENG, UR5WCW, VE2EH, VE3FU, 3A2MF, 4X1VF and 9U5D/SM5DIC for the following DX information.

3A PIRATE. Gino, 3A2MF, informs OPDX that a station operating on CW signing 3A/I1YRL between August 1-22nd was a pirate. Gino has talked to Luc, I1YRL, and it was confirmed that Luc was not in Monaco during this period. Do not QSL because cards will be returned to sender.

5R, MADAGASCAR. John, SM0DJZ, reports that from October 21-31st, he will visit Ake, 5R8FU, and hopes to be able to operate as second operator from his home station. He will try to activate 160 and 80 meters, if they can find ways of erecting an large enough pool supporting antennas for these bands. Also, he will be active on WARC bands and maybe 6 meters and RTTY. John states that they will enter the CQWW DX SSB Contest as a Multi/Single, but on a small scale! (At least 5R8 and Zone 39 will be activated!!). He provides the "Sunrise and Sunset" for 5R8 around October 25th, which is approx: 0215/1457z. An online QSO-look-up will be available after his return in November. Please check the Web page:
http://dx.qsl.net/logs
Contacts for 5R8FU are already now avaible for all his activity up to July 12th. John hopes he will be able to make some photos available on some WEB-pages afterwards. QSL via SM0DJZ, Jan "John" Hallenberg, Siriusgatan 106, SE-195 55 Mersta, Sweden

7Q, MALAWI. Eli, 7Q7CE, has been very active over the past weekend on 10 meters. Check around 28495 kHz after 1315z and as late as 1430z Meanwhile, look for Harry, 7Q7HB, to be active from Club Makokola on the south west shore of Lake Malawi as of Sunday, October 3rd. By the way, this is the same QTH as 7Q7CE. Harry's activity will happen when

time and work permits him to operate. QSL via G0IAS (DIRECT only).

9U, BURUNDI. Ragge "Gus" Jagero, SM5DIC (aka 5X1D, 9Q5TE, 9X/SM5DIC), informed OPDX by E-mail that he is now active as 9U5D and will stay there up to Christmas. He states that he received his new license last week by the Dept. of Ministery of Defense (ARCT) who now gives out LEGAL licenses. Gus reports that his license's serial number is 001! Gus will be active on all HF bands including 6 meters. Also, Leif, SM0BFJ, Gus's QSL Manager, has sent along some additional information. He states Gus is in Bujumbura and has a station at his office which is in another part of the city. Gus states that he will be active on all bands, but unfortunately, 40, 80 and 160 meters may be difficult because of the 1800-0500z curfew. However, Gus has promissed to stay over some nights at the office in order to work some lower bands. His equipment is an IC-706, and the antenna is an inverted L with a total length of 41m. On 6 meters he will use a yagi. QSL via SM0BFJ (Direct only, no bureau) at: Leif Hammarstrom, Birger Jarlsgatan 38, SE-114 29 Stockholm, SWEDEN. By the way, Gus has forwarded all his documentation to the ARRL, who apparently accepted his documentation.

CO9, CUBA. Look for CO2WF, CM2KL and others to participate in the CQWW SSB Contest (October 30-31st) as CO9BCC from Boca Ciega beach. Operations will be 160-10 meters. QSL via VE3EH. Check out the CO9BCC Web site at: http://www.qsl.net/ve2eh/co9bcc.htm
ADDED NOTE: Pierre, VE2EH, states that you will find the latest results of the 1999 ARRL International DX Contest, plus photos, check out the Web page: http://www.qsl.net/ve2eh/co9.htm

CP6, BOLIVIA. Mats, LU9AY, will go to CP6-land to work the CQWW SSB Contest from October 27th through November 7th. He will be on the air as CP6/LU9AY on SSB and CW. Activity will be mainly CW, and he will try to hang around the WARC bands. Look for him before and after the contest. QSL via NU4N. Mats states, "Please no more homecall cards.. or LU bureau.. because I am not replying those.. all should go to NU4N."

D44, CAPE VERDE ISLANDS. "The 59(9) DXReport" reports that Angelo, D44BS, has informed them that Julio, D44BC, had a heart attack and is in critical condition. OPDX wishes Julio a complete recovery.

EAST TIMOR. Peter, 5X1T/ON6TT, reports that one member of his team, Brian 'Joe' Poole, G3MRC (5X1P), is in East Timor and Darwin installing their stations. He knows that Brian has a VK8 license already, but forgot his callsign. However, it will probably take a while before East Timor will be qualified as a new country. It must conform to one of the 3 criteria for a DXCC entity.

GB2, GIBRALTAR. Gary, W5FI, informs OPDX that he will be active as ZB2/W5FI now through October 10th. Although this is a business trip for Gary and business will come first, he anticipates being on during the openings to NA, SA, JA, and Europe almost every day. His emphasis will be on RTTY, CW, and SSB on 80-10 meters. QSL via W5FI.

HB0, LICHTENSTEIN. Helmut, DF7ZS, reports that they will be active from here and participate in the CQWW DX SSB Contest from October 30-31st. The callsign is not known yet, as they are trying to get a short callsign from the HB0 guys. The worst case would be HB0/DL0TS. QSL info is via DF7ZS. They are planning to operate mainly on 40 meters operating split (looking for DX at night) and a second station on 10/15/20 meters. The team is going to test the 40 meters band setup during the WAG (Worked all Germany) Contest, October 16-17th, using the DF2OOO callsign.

IOTA NEWS.....
AF-NEW. The Italian team composed of Peppino/I8IYW, Tony/IK8UHA, Tony/IK8VRH, Robby/IK7XIV, IZ7ATN, Alex/IZ0CKJ and Robby/IS0JMA will be activating Giftun Island in the South Red Sea Group. Activity from this new IOTA will take place in May 2000. The team is looking for sponsors and expects that this DXpedition will cost 10,000 USD for a 5 day operation. If they succeed in retrieving enough funds, they could also activate from Tawila Island (Another new IOTA) in the North Red Sea Distant Group. The QSL Manager is: IK8UHA, Antonio Barbato, PO Box N.5039, 80144 Naples, Italy. A Web page is under construction at: http://www.qsl.net/su9dx

AS-032. Look for Takeshi, JI3DST, to be active from Oosumi Archipelago (Tanega-Shima) (Nishinoomote-City Kagoshima), as JI3DST/6, November 20-22nd. Activity will be on 17/15/12/10 meters SSB (40 meters for JA). QSL via the JARL Bureau (The BEST Route) or direct (address below).

AS-049. Takeshi, JI3DST, is planning to be active from Takara at the end of December, 1999.

AS-067. Look for Joe/JA4PXE/JA6, Yuichiro/JF6WTY/JA6 and Takeshi/JI3DST/JA6 to be active from Uji Archipelago (Kawanabe-Gun Kagoshima), October 8-10th. Activity will be on 40/20/17/15/12/10/6 meters SSB. QSL via JARL Bureau or direct to:
JA4PXE - Joe Kuwahara, 1-74 Midorimachi, Tokuyama-City Yamaguchi, 745-0075 Japan
JF6WTY - Yuichiro Hayashi, 2-40-27-101, Murasakibaru, Kagoshima City Kagoshima, 890-0082, Japan (99 CBA OK)
JI3DST - Takeshi Funaki, 2-18-26 Hannan-Cho Abeno-Ku Osaka-City Osaka, 545-0021 Japan.

AS-100. Jan, 4X1VF, reports that the callsign has been changed for his group to be active from Akhziv Island on October 23rd. Look for them to be active as 4X0A instead of 4Z0A. Please refer to OPDX.427 for more details.

AS-136. ED, BD4ED/4, operating from Chongming Island at the mouth of the Yantez River, can sometimes be found on 21024 kHz around 0100z. Also, check 30 meters after 2000z, as late as 2200z. QSL via CBA.

EU-060. Kostas, SV1ENI, has moved to Evia Island, his wife's home, and will operate from there. SV1ENI will operate CW 160-10 meters. His previous address in Athens is not good any more. QSL only to the bureau or to his new address: Kostas Sarmas, Gialtra, 34300, Evia, Greece. Please do not add any callsigns to the address.

EU-120. The Taunton and District ARC will be operating from the old light-house (200m above sea level) on Lundy Island with the callsign GB0LI from November 1-5th. Operators Bill/G3WNI and Tom/G0PSE will be active on 160-10 meters CW and SSB. QSL via Bureau or direct to G3WNI. After the DXpedition, the log will available at: http://dx.qsl.net/logs

NA-031. Scott, W1LU, will be activating Goat Island and Aquidneck Island, RI, as W1LU/p on Tuesday 10/5/99, beginning at 1600z, for an hour or so on each island. Special QSLs will again be available via W1LU (ex WA1P).

NA-142. The Magnolia DX Association will be active as W4D from Dauphin Island on SSB and CW during the CQ WW DX Phone Contest weekend. Check the usual IOTA frequencies as well as the WARC bands. QSL via W5OXA.

J6, ST. LUCIA. Members of the "Florida DXpedition Group" (W4DXP) will be here October 25th through November 1st. They will be active in the CQWW SSB Contest (October 30-31st) as J6J. Look for J68WB (William/N2WB), J68AZ (Clarence/W9AAZ) and J68WX (Bill/W4WX) before and after the contest on all bands/modes. QSL cards for J6J go to N5VL and others to home calls.

QSL INFO AND NEWS......
4V30CNT was active this past week in celebration of the 30th anniversary of the foundation of CONATEL by the Radio Club of Haiti. All stations who made a contact with 4V30CNT will receive a special QSL card. QSL Managers are Alan, WA4JTK (for international contact), and Bernard, HH2B (local contacts).

Gilles, F6IRA, reports that Zoli, HA1AG, has confirmed by E-mail that the CQ ZONE printed on his QSL is wrong. The 21 should have been 20. Zoli states that he is sorry for this mistake.

Alex, HK3TAS, states he was active in last week's CQWW RTTY CONTEST, and a lot of stations need his QSL info. His callsign HK3TAS is new and you will not find it in the Callbook. Alex does have a QSL Manager. Please QSL via Siso, HK3SGP.

QSL Manager Leo Fry, K8PYD, was operating in the CQWW RTTY contest from HZ1AB. All QSLs will be answered by himself. Outstanding QSLs for all modes in the months of June, July, and August should be answered in the near future. Leo informs OPDX that HZ1AB now has RTTY and PSK-31 capability and should be active on these modes in the coming months along with 160 meter SSB and CW operation. HZ1AB is planning participation in the upcoming CQWW SSB and CW contests.

Takeshi, JI3DST/3, was active this past weekend from Honshu's Coastal Island (Awajishima Hyogo), IOTA AS-117. QSL via direct or the JARL Bureau.

NEW QSL MANAGER. Phil, G3SWH, reports that he has taken over the QSL management of ZF2NT from N2AU. Phil states that he has a full copy of the logs since the 5th of June 1998, but has been asked by Bruce to answer "ONLY" direct QSLs with return postage and SAE, i.e. (no bureau applications will be processed). Phil's postal address is: Phil Whitchurch, 21 Dickensons Grove, Congresbury, Bristol, BS49 5HQ, United Kingdom

Chris, VE3FU, reports that he has recently moved, and Buckmaster still has his old address. QRZ has his new address, and Chris has paid to have his mail forwarded until the end of the year, but after that any QSLs sent to his old address will be returned by the post office. Of course, via the bureau always works. If you need cards for VO2AC, VO2CQ and VE3FU/NP2, QSL via the bureau to VE3FU or direct to: Chris Allingham, 3417 Torwood Drive, Dunrobin, ON, Canada K0A 1T0

WB1HOF was a special event station activated last weekend and was sponsored by the Hampden County Radio Association at the Basketball Hall of Fame in Springfield, MA. The WB1HOF callsign stands for "World Basketball One Hall of Fame". QSL via Hampden County Radio Association, P.O. Box 705, Agawam, MA 01001.

SPECIAL ACTIVITY. Jaime, EA4ABW, would like to inform everyone that on October 15-16th the JOTA (Jamboree On The Air) will take place. A lot of special Scout event stations will be on the air. In Madrid, Spain, Jaime states that he will be on the air possibly as ED4SDM (Scouts De Madrid) or with his personal callsign EA4ABW/J (Jamboree). The special callsign has not been approved as of yet and is still waiting for authorization. QSL will be via EA4ABW through the bureau or via CBA.

SPECIAL EVENT. Look for EO55WL to be active between 2100z October 24th, and 2100z October 29th, to celebrate the 55 years of libaration of the Ukraine in WWII. The activity will be on all bands CW/SSB/RTTY/PSK31/SSTV. QSL via UT1WA either bureau or direct to: P.O.Box 5951, LVIV, 79054, UKRAINE. The same callsign was used in July this year to celebrate the liberation of Lviv City. The QSL cards are OK via the same manager, UT1WA, either bureau or direct. After the end of October, QSL cards for both operations will be sent as soon as they will be received from printer.

SPECIAL EVENT (Attention Prefix Hunters!). The very special callsign EG0UV will be used during the 500th anniversary of the University of Valencia. The special event station will be again on the air October 6th (next Wednesday) because of the official inauguration of the academic year 1999/2000 by his Royal Highness, the Prince of Asturias. The number zero (0) is only issued to stations where some member of the Spanish Royal Family has taken part in a special event and as the personal callsign of the King of Spain, EA0JC. QSL via EA5GMI.

UP ONE. The ARRL DXCC List is officially up one entity as of October. With the addition of Palestine (E4), the current entities are now 332.

VK9C, COCOS-KEELING ISLAND. The "DX News Letter" reports that a VK2 ham has said to be on Cocos Keeling now and should be able to be on the air after October 1st. No QSNs were reported as of yet.

ZK3, TOKELAU. Ron, ZL1AMO, has cancelled his trip to ZK3 due to being sick from the boat ride to 5W (Samoa). He states that he could not face the trip on the boat again. However, remember the "Double Trouble" group will be heading here October 7-12th.

ZX, BRAZIL. "The 59(9) DXReport" reports to look for ZX7G from Fortaleza de Nazare Island, October 8-11th. Activity will be on 80-10 meters, CW and SSB. QSL via PY7MEU.

You know, Al, it's no wonder nobody at the FCC has wanted to do Amateur =
enforcement in the last ten years. I have a net here of whiners that want =
to be an International Broadcast Station on 3950, one of the most =
congested areas, and have it all to themselves, all the time, provoke =
everyone and use the frequency for anything in the world EXCEPT the basis =
and purpose of Amateur Radio and its allocated frequencies, and have the =
government run interference for them and provide a clear channel for them, =
ignoring the fact that frequencies are shared. I get mail from you all =
every day, and handling the "Liberty Net's (excuse me, "Great Liberty =
Net") problems would be a full time job. You rail every night about how =
bad the government is, but run to it every single day complaining, then =
constantly criticize and second guess everything we do. You remind me of =
the football cartoon, where the coach, finally tired of armchair advice =
and criticism, turn to the spectators and yells "You, in the brown jacket, =
go in for Number 42". All of you are starting to lose credibility with me. =

I have limited time, about 45 calls a day and =
about 125 e mails every day, and I need to move on to real problems of =
Amateur Radio being experienced by people who understand what it is for in =
the first place. Please do not contact me again.

He has already accomplished the impossible. For over a decade, no one at the Commission thought chaos could be throttled without greater resources.

Along comes a guy who is tilting against anarchy single-handedly. Sure, he comes under fire, as anyone attempting such a herculean feat would. To the hams lodging protests, remember, there is a due process to it all. If unsatisfied, play out your protests formally to judgement.

The FCC, least of all, has any designs on tampering with due process (although before Riley they were known to deep six hams' appeals). These are guys and gals. for the most part, with the same strengths and flaws we all have who are trying their best to do a tough job. Ultimately, all citizens will benefit.

Hats off to Riley.

Look at:

http://www.batteriesamerica.com

they have replacement cell packs for the BP84. Also they have an niMH BP84
type replacement pack, with alot more capacity. Prices aren't bad either.

John,

The term "100% Modulation" usually refers to a condition in which the amplitude (magnitude) of a radio frequency carrier signal is controlled by another signal (usually in the audio range) to the extent that it goes from no signal at all to 100% of the possible carrier power in response to changes in the audio signal.

Well, just for my $0.02 worth. I've been a licensed ham for...ummm...6 years now. Haven't been too active over the last 3 years, since I moved to a new city, got married, and started a business. But I've been in emergency situations where I called MAYDAY over 2m and got answered. Never not been answered, in fact. I've also been in emergency situations without my HT and really wished I had it at the time.

I've travelled extensively around the country over the past 6 years with my HT. I've only been in one place--Denver, CO--where I put out my call and didn't have somebody respond (and I later found out that I had my offset wrong, so it was even my fault!). I've unexpectedly participated in a

school amateur radio event in Canon City, CO when I responded to a call on 2m, much to the delight of several 6th-graders. Frankly, I've passed many a mile talking to people on both 2m and 10m.

On the flip side, I do carry a cell phone nearly 100% of the time...I like amateur radio, there are many benefits to it, but I also don't place all my eggs in one basket. 'Course, if Y2K hits hard and heavy, it's going to be my HT that I'm using for communication, not my cellfone.

Peace--Doug, N0YVW

Tim you seriously need some emotional help man. You're clearly suffering from obsessive compulsive disorder with regards to this Liberty Net thing. If all of the energy that you put into this issue were directed towards some of our social maladies, they'd be history. Please do yourself a favor and get some counseling....not for our sake, but for yours. Get away from your Ham radio and your computer for at least one month and try something like bird-watching.

What you'll find is that the birds don't argue back.....and observing them is great spiritual cleansing for one's Karma.

I have been a ham since 1956. I have held the positions of SEC, Technical Co-ordinator, Army Mars AAT4TK. I am an avid homebrewer and antenna experimenter. I hold a EE degree and have 30 years experience in computer design, programming, and system analysis. Present station is all home brew except the receiver (75A4) and can be heard on 3973 kHz Friday mornings from 0300 to 0500 ET when I am NCS for the before breakfast club. W4JLE is my original call which I just reclaimed under the vanity call sign program. I am NO LONGER a member of the ARRL and that has hampered my efforts with RACES.

ARRL Laboratory Engineer

* Radio Frequency Interference (RFI) matters
* RF Exposure Safety/Regulations
* Equipment Testing

I have been at ARRL HQ for over 13 years. During that time, I have become ARRL's RFI and RF-exposure guru. If you have questions about RFI or RFI exposure, first go to the ARRL's Technical Information Service World-Wide Web Page:

http://www.arrl.org/tis/

and download the applicable information packages. From there, you can direct questions about RFI or RF exposure directly to me. I will either answer your question directly, or refer you to some of my contacts in industry, in the cable industry, etc. ARRL also publishes the _ARRL RFI Book_ and _RF Exposure and You_.

I have also had experience with testing of transmitters and receivers, mainly in conjunction with ARRL's Product Review testing. A copy of ARRL's Test Procedures Manual can be downloaded from:

http://www.arrl.org/members-only/prodrev/testproc.pdf

Before I came to ARRL, I spent a number of years as a TV and audio service technician, so can often help with troubleshooting questions. I wrote the troubleshooting chapter of the ARRL Handbook.

The ARRL Technical Information Service (TIS) Coordinator is now another member of the ARRL HQ staff. Please direct all TIS queries to tis@arrl.org, _NOT_ my E-mail address above.

See Mary Lau's entry for more information about the ARRL Info Server.

Gene Harlan WB9MMM

atvq@aol.com

Amateur Television Quarterly (ATVQ) Magazine

The magazine's E-mail address and mine are the same: ATVQ. There is also a ham radio section for "manufacturers and dealers" on America On-Line in which we list Amateur Television Quarterly, as expert and manufacturer. That is where most of the Frequently-Asked Questions (FAQ's) come from.

Most FAQ's are answered in one of two books we published. ATV Secrets for Aspiring ATV'ers is a non technical book, and Volume II is a 300-page technical manual with theory and projects for all equipment necessary to operate an ATV station. Prices in US funds are $9.95 and $24.95 plus postage ($3.10). Most of your inquires can be answered by either of these two books.

I am also compiling a set of W6ORG Notes, a regular column in ATVQ, which answers many of the technical FAQ's on various equipment and operations. This will be available for $9.95 also.

ARRL Contest Branch Manager

I have been active in the Hobby for over 28 years, in a wide range of activities from local clubs, special events, public service communications, emergency communications, contesting, DXing, packet, repeaters, traffic handling, and more. I have served as an officer of local radio clubs, newsletter editor, Events Coordinator, Field Day Chairman, Local County Emergency Coordinator and Area District EC, member of several emergency preparedness planning groups, SKYWARN coordinator, and liaison to numerous served agencies in North Carolina. I have taught amateur radio licensing classes (theory and code) and have been active in developing small group "seminars" for training (everthing from "how to build a dipole" or "handle traffic" to "how to work with/at various agencies when dispatched during and emergency." I hold WAS (both novice CW and the "Geratol" award, DXCC, WAC and a wide range of on-the-air operating experiences. I was selected for membership in the A-1 Operating Club, have been award "Ham of the Year" awards for local clubs, and am willing to work with new-comers on most any project.

Civil Air Patrol (CAP)

I was Communications Officer and former unit Landstation Bluebird 284, 1980-87. Statistically, Landstations are relatively rare. A land station in CAP is an HF-capable station operating from both mobile and permanent locations as needed. As a land station, I checked into several regional nets for the Missouri Wing of the CAP. I am familiar with the CAP emergency protocol as well as MARS and ARRL. Also, I have extensive teaching experience for Novice to General levels and currently am a teacher.

I would like to help any new or prospecting hams in any way that I
can. My personal experience is limited, but I am net control of a
local Elmer Net here in Pittsburgh. This net meets every Saturday
evening at 9:00 PM local time on one of the repeaters of the North
Hills Amateur Radio Club (146.88- MHz). This net is intended to help
all new hams. Many experienced hams also check in and can answer
questions and share their wisdom with beginners.

Some of the current SIGs include:

NETSIG Regional Networking SIG
BBSSIG BBS SIG
HFSIG SIG on HF Digital Topics
DSP-93 SIG for those that are building TAPR/AMSAT DSP-93 kits
APRSSIG SIG on APRS
TAPR-TNC SIG on TNC Issues
DSP SIG on general DSP topics
MIC-E SIG on supporting the TAPR APRS MicEncoder kit

TAPR-BB Announcement channel for TAPR bulletins and information

General Information about TAPR:

* Ever heard of a TNC?
* Interested in general packet radio information?
* Interested in Spread Spectrum Communications?
* Interested in high-speed packet operations?

* Interested in other types of digital communications?
* Interested in experimenting or building kits?
* Interested in keeping up-to-date on national digital and packet issues?

Then you might be interested in TAPR!

Goals:

* Support Research and Development efforts in the area of amateur digital communications
* Disseminate information on packet and digital communications
* Provide affordable and useful kits for experimenters and hobbyists
* Pursue and help advance the amateur art of communications through publications, meetings, and standards

History:

If you have used a packet radio TNC, then you are already a part of TAPR history.

The TNC (Terminal Node Controller) project was the first big project that TAPR tackled and completed. Now TAPR covers a wide range of interests including: APRS, Spread Spectrum, networking, Timing, DSP, HF, and much more.

TAPR was founded in 1982 as a national organization with interests in the areas of packet and digital communications. Today, TAPR continues as a membership supported non-profit amateur educational research and development organization. TAPR currently has more than 2500 members, worldwide. TAPR continues to develop kits for the amateur community and is working actively on publications and communications standards.

Membership:

Membership in TAPR includes a subscription to the quarterly published Packet Status Register newsletter. PSR has been published since 1982 and is recognized as an authoritative source for up-to-date user and technical information on packet radio. Much of the material in PSR is timeless. Back issues may be obtained from the TAPR office. Membership in TAPR is $20 US for one year in USA, Canada, and Mexico. Outside North America is $25 US.

Join the amateur digital-revolution -- Join TAPR!

http://people.qualcomm.com/karn/

High-Performance Software Modem Project

Recently I've been working on a prototype SQPSK (staggered quadrature phase shift keyed) modem for the amateur satellite channel. This modem is implemented totally in software running on a PC with an ordinary (non-DSP) Soundblaster card. It runs at 1200 bps and fits into a SSB transceiver bandwidth.

I've made good progress and have put some info up on my web page about it, including an audio file to show what it sounds like in noise when the signal is still copyable, available from:

http://people.qualcomm.com/karn/ham.html

Watch that page for an announcement of when I actually release the code, which I plan to integrate into KA9Q NOS.

Spread Spectrum

I've been trying to answer the question of consequences of promoting relatively wide-band digital modes on band occupancy and throughput (i.e., What gets optimized? Are there tradeoffs in quality vs. quantity?) in the context of the spread spectrum rules debate, but I think it needs to be a much wider discussion. See my reply comments to the FCC on this issue:

http://people.qualcomm.com/karn/papers/index.html

(See also Steve Bible for more information on Spread Spectrum)

[_Editor's Note:_ I'm honored by the presence of many advanced-level Elmers in this directory, including Jeffrey Angus, Gary Coffman, and now Phil Karn. Phil has graciously agreed to appear in this directory for the purpose of elmering and technical exchange for the advanced topics listed above. As with all of my Elmers, please respect their time by only seeking assistance from them for the topics under which they are listed. There are many Elmers willing to answer more beginning-level packet radio questions, including basic questions about IBM PC hardware, TCP/IP and NOS. Consult the "IBM PERSONAL COMPUTER (PC) AND CLONES" and "PACKET AND DIGITAL NETWORKING" categories in the Subject Quick-Search Index for a complete list.]

The W5YI Group, Inc.
P.O. Box 565101
Dallas, Texas 75356
USA
Tel. +1 (817) 461-6443

This firm consists of two separate divisions:

EDUCATION DIVISION:

Develops and distributes amateur radio self-training materials,
including the Gordon West/WB6NOA line of audio, video, computer
software and printed study materials. Credit card orders and
information from (toll free): +1 800 669-W5YI (9594). All materials
are guaranteed current and shipped within 24 hours with 2-day priority
delivery. They offer a special discount for instructors conducting
training classes.

W5YI Amateur Radio written license exam and Morse Code training
products are also available from every Radio Shack nationwide. Color
photographs of the major training products are available at their
Express Order or Radio Shack Unlimited desk.

THE W5YI-VEC:

Coordinates the activities of more than one thousand volunteer
examining teams world-wide. The locations of test sites near you can

be determined by calling +1 (817) 461-4663 anytime, including evenings and weekends. Any General, Advanced or Extra Class amateur may form their own VE team by calling +1 (817) 860-3800 during normal business hours.

All examination results are electronically filed with the FCC. Amateur radio licenses and call signs are normally issued within 48 hours of VEC receipt of the examination paperwork. New amateurs may determine their call signs by calling the FCC's toll free consumer assistance line: +1 (800) 322-1117.

Hospital Disaster Support Communications System (HDSCS) Coordinator

HDSCS World-Wide Web Page:

http://members.aol.com/emcom4hosp/

For over 15 years, the 90-plus members of the ARES/RACES-affiliated Hospital Disaster Support Communications System (HDSCS) of Orange County, California have served over 35 hospitals in nearly 50 emergency situations. At the new HDSCS site on the Web, you can find out how volunteer Amateur Radio operators can be an important backup communications resource for hospitals, if the hams are well organized and trained.

There you will find:

* How HDSCS organizes to support hospitals
* What "dedicated communicators" are and why they are important
* Frequently-Asked Questions about hams helping hospitals
* The surprising answer to "How often do hospitals need hams, anyway?"
* Response from hospitals served by HDSCS
* Info given to new HDSCS members
* Recruiting hams for hospital communications
* And lots more...

Jes, mi parolas la Internacian Lingvon, Esperanto.
Yes, I speak the International Language, Esperanto.

Esperanto, the International Language, is spoken by 600,000 to 2,000,000 people in over 110 countries.

Over 75 countries have national Esperanto organizations, including third-world countries like the USA.

In Europe there is a very active Esperanto Ham Radio association known as ILERA - Internacia Ligo por Esperanto-Radioamatoroj (International League for Esperanto Radio Amateurs).

For more information concerning Esperanto, contact ELNA (Esperanto League for North America) at +1 (800) ESPERANTO (377-3726) or http://www.esperanto-usa.org/ (The ELNA membership list also lists member ham calls and E-mail addresses.)

If you wish a ham Esperantist for a penpal, contact me at one of my addresses above.

I am involved in training for new and upgrading Hams, paying back for Elmering received over the years as I came into Ham Radio. I am a VE for VEC's active in local area. I am most interested in assisting young, old, and handicapped persons to discover Ham Radio. However, I want to help anyone that is committed to getting a Ham license or upgrading. I am most active on Ham satellites, mobile and fixed HF,

Digital modes and construction. I am an avid electronics constructor, repairer and experimenter. I am trying to sample all modes, bands, and interest areas. I am also skilled in Public Relations, demonstrations, and "de-mystifying."

Dakota County, Nebraska ARES Emergency Coordinator (EC)

ARRL Official Bulletin Station (OBS)

I have been involved in Packet since 1984. I currently run a Packet BBS with the F6FBB software, as well as a number of Packet Nodes using TheNet Software. I have coordinated the Volunteer Exam Session in this area for a number of years. I operate 2 meters and HF, both CW and SSB. DX'ing and Contesting are some of my activities, along with collecting prefixes.

I have had NWS spotter training and am part of organizing the spotter network in the Siouxland area. AS the EC of Dakota county, I work with the Woodbury County, Iowa EC in the spotter effort.

During my business activity as a Systems Engineer with IBM, I have developed some expertise in PC's and have worked with the DOS, Windows and Windows 95 Operating Systems along with many Ham-related applications.

I have organized a number of Ham events such as Packet Symposiums and am the current Chairman of a Regional Ham Radio Convention.

I have a large collection technical manuals. Copies are available for the cost of duplication and postage. THIS NOT A BUSINESS. It is done as a courtesy to those needing assistance.

I lecture and conduct workshops on the subject of ElectroMagnetic Interference, primarily related to problems encountered in the Clinical (Hospital) environment. This is a program based on papers of which I am the principal author published in journals related to Biomedical Engineering. Related to this activity, I have and use signature analysis equipment and, depending on area and time, am available to assist in location and identification of sources of severe interference to radio amateur activities.

Dayton, Ohio E-mail Elmers

Sponsored by the Miami Valley (Ohio) FM Association (MVFMA):

http://www.febo.com/

The Dayton E-mail Elmers service allows new or prospective hams in Dayton and Southwestern Ohio, or even experienced amateurs who are venturing into a new aspect of the hobby, to send an E-mail request for assistance. Volunteer on-line Elmers then can provide a response in the "Elmer" tradition of mentoring new or less-experienced hams.

Today, many hams prepare for their license exams through classroom programs, and the individual Elmer's touch isn't as common as it once was. The E-mail Elmer service is an attempt to restore this long tradition. The MVFMA hopes that the initial E-mail exchange will be the start of an ongoing Elmer relationship in the best tradition of Amateur Radio."

Hams may use the E-mail Elmer service simply by sending an E-mail message to:

elmer@febo.com

and posing the ham radio question they'd like to have answered. Users will get a machine-generated confirmation, and within a few days, they

will get a response from one or more of the volunteer Elmers.

For more information, or to volunteer as an E-mail Elmer, contact me
at my phone number or E-mail address above.

I'm a software engineer specializing in Macintosh development, and I've been a ham since 1982. I was first licensed at age 14, and I now hold an Extra class license. My expertise is in antenna-building and theory, CW (Morse Code), DXing, SWLing, and HF operating practices in general. I also operate mobile in a '96 Ford Ranger pickup. I'd be happy to help any new or aspiring amateur radio operators.

Ken Pulfer VE3PU

jkpulfer@rac.ca
jkpulfer@igs.net

Radio Amateurs of Canada (RAC) Treasurer and Webmaster

(RAC is Canada's national amateur radio society.)

RAC World-Wide Web Page:

http://www.rac.ca/

Callsign E-mail Addresses for All Interested Canadian Amateurs

Any licensed Canadian amateur radio operator can now have an E-mail address of the form:

callsign@rac.ca

This means that you will no longer have to advise all your contacts of any new E-mail address if you change your Internet service provider. Canadian amateurs will not have to keep track of dozens or hundreds of E-mail addresses. Just remembering the callsign is all they will need.

RAC is able to offer this free service thanks to the volunteer help and support of Information Gateway Services (IGS) of Kanata, Ontario, Canada, and in particular the work of Rene Kahle, VA3RDK. Rene developed the E-mail aliasing software, and set up the server hardware (IGS also donates server space for the RAC and ARAS World-Wide Web Pages that contain much useful information for Canadian amateurs).

If you wish to obtain a callsign E-mail address, simply send a message to:

alias@rac.ca

with:

callsign = realaddress

in the BODY of the message.

For example, if my callsign was VA4KP and my real (current) E-mail address was:

ham@qsy.ca

I would put the following in the BODY of the message:

VA4KP = ham@qsy.ca

Any subsequent mail addressed to:

VA4KP@rac.ca

would be redirected by the IGS server to:

ham@qsy.ca

Of course, such mail would NOT go anywhere near RAC headquarters, nor be seen by RAC officials, nor placed in a public database that could be exploited for "junk-mail" distribution. Any E-mail addressed directly to:

ham@qsy.ca

will also be delivered as in the past without passing through the IGS server.

The E-mail aliasing service is currently set up on a trial basis. If it works well and amateurs find it useful, it will remain available for all who wish to use it.

I am a consulting engineer, which takes me to various locations. My home address is shown above and in the call book. I can answer E-mail (as everyone knows) from anywhere that I may be.

Don't know where you are going to use a old horse like myself. I am part of the old and part of the new displine. I have fabricated all my wire antennas which includes the matching device (transformer) and been building equipment for more than a quarter of a century. I also manage to repair all my equipment - when parts are available. I restore early age broadcast receivers and HF transceivers. I know the old Heathkit HW100 and HW101 very well and built a Heathkit 5400 transceiver with matching Power Supply. I have constructed many amplifiers and own a Swan, Collins (S-Line), Kenwood, Heathkit, and Johnson. I am very active in the two meter band.

In addition, I have restored many an old Coleman Lanterns (which is very enjoyable) and also have some American Gas Machine Lanterns (1930's).

k4abt@packetradio.com
buck4abt@inmind.com

Packet Radio Networking World-Wide Web Page:

http://www.packetradio.com/
http://www.packetradio.org/
http://www.sedan.org/

To open the pages, a Packet Radio Glossary that I began writing in 1988, and updated as new mnemonics and acronyms were added to the Packet jargon, is at:

http://www.packetradio.com/glossary.htm

Next there is the "original" Packet Radio Primer for the Novice or beginning Packet Radio operator at:

http://www.packetradio.com/primer.htm

Since 1996, the TNC to Transceiver diagrams from these pages are the most used and imitated on the WWW. I maintain these drawings directly from the Original Equipment Manufacturers (OEM's) and insure they are of the latest makes and models. These interface diagrams are at:

http://www.packetradio.com/tnc2rad.htm

These interface drawings are taken from over 14 years of the PACKET USERS NOTEBOOK column in CQ Magazine. In addition, I've included many TNC and transceiver 9600 baud modifications at:

http://www.packetradio.com/9600mods.htm

I've included several zip files of the latest X-1J4 Rev C code and Packet Radio terminal programs. This site contains information and instructions that enable the reader and user to build and configure a Packet Radio network. Complete with the TNC changes and MODS plus both user level and backbone node parameter suggestions, at:

http://www.packetradio.com/network.htm

The parameters and mode guidelines are at:

http://www.packetradio.com/x1j4pram.htm

To round out these pages to be the most helpful to all Amateurs, there are pages that describe "How to...":

* Design and build antennas, complete with drawings and formulas
* Build a superb ground system for your QTH, node/repeater, or comm site
* Build a solar powered site where no utility mains are present
* A coaxial cable table for the most used Coax by Amateurs
* WX Watch and SKYWARN links
* A Packet Radio bandplan
* An online callbook lookup link
* Hamfest Calendar
* Network maps of the 11 State SEDAN emergency comm network

and much, much more.

I have been a ham since 15. I have been an Extra class operator since age 17, and a VE since age 18. [_Editor's Note:_ Possibly the youngest Contact VE ever.]

I am an avid HF QRP (low power) and mobile operator. I have spent literally hundreds of hours installing my mobile station (IC-706 and Screwdriver antenna, plus more grounding straps than I can remember) in my 1995 Neon.

Most of the time I operate QRP CW mobile.

Why? It challenges my operating skills as much as possible, plus QRP is safer (RF-wise) than is 100 or 1500 watts. With the effects of RF exposure still unknown, I don't feel like exposing myself to high-power RF fields any more than necessary, and if 3 watts will do the job, so be it, I'll emit it.

In addition, people are generally amazed when you mention that not only are you running just 3 measly watts output power, and on top of that you're doing it from your car as it's zipping down the Interstate at 65 mph. They just can't believe it's possible that less power than a nightlight is bouncing off the ionosphere and ground three times, and is still able to be detected 10,000 miles away.

I'm here to tell them it is.

I enjoy building kits, and consider myself to be a good builder.

I am a fair contest operator, and enjoy 35 WPM CW ragchews as well as hunting for DX.

I moved from Laurel, MD to Eugene, OR in November, 1998. It has been strange to not hear European stations 24 hours a day, although I am getting used to hearing Japanese stations 24 hours a day. I am a member of the Valley Radio Club of Eugene, and give VE exams with the local group. In the past I have been very active with both the Laurel (Maryland) and University of Maryland Amateur Radio Clubs, and

operated with both during public service events, contests, special events, and emergency operations (earthquakes, hurricanes, etc.). I have been the chief HF operator at University of Maryland HF-related events (Field Day and Sweepstakes) for the past three years.

As a Volunteer Examiner, I have conducted roughly 150 test sessions, testing at minimum a thousand applicants.

I have given Novice/Technician/General license class instruction, as well as taught a 5 WPM code class. I have been told that I have a knack for describing complex subjects in ways that make them far easier for laypeople to understand. I developed a presentation touting the best points of QRP, and made presentations at four radio clubs in Maryland, and at the QRP forum at the 1998 Dayton Hamvention. I organized the Dayton QRP banquet in 1998, and am doing the same in 1999.

Most of all, I love a good challenge, and proving I can do something I've been told is practically impossible.

For instance, would anyone believe that communicating on 20 meters over a distance of 14,000 miles from your car at 2.5 watts was possible?

My favorite aspect of amateur radio is contesting. It drives my station improvements and operating proficiency. I have played around with antennas and made various station modifications to improve my

contact efficiency. Along the way I have solved some RFI problems, built many of my station accessories, installed and built some HF antennas, put up a small (40') tower, etc.

I volunteer as a RACES operator in no particular capacity. I help with a few VE test sessions a year mostly representing the ARRL VEC with the Burlington ARC team.

I work as a SRAM design/product engineer at IBM Microelectronics in Essex Junction, Vermont. I have been interested in electronics and computers since a young age, but only got my amateur radio license in 1993 as a Technician at the age of 31. I got to know the code and upgraded to Extra in February of 1994.

ARRL Technical Specialist

I am a pilot (N6141F) with more than 10 years as air and ground search and rescue. Active in ARES, RACES, and Civil Air Patrol (CAP West 41).

I also have a home in Alpine, Texas, USA.

I now teach classes four times a year. I do classroom work in 15 hours. I teach the Technician class using the ARRL video course.

I also do an adult class where I give them a study guide and have them get the study materials and home study for six weeks. Then I do a Saturday review, and (if needed) a Sunday review, then set up the test the next weekend.

Courage Center
HANDI-HAM System
3915 Golden Valley Rd.
Golden Valley, MN 55422
USA

Manager, Courage HANDI-HAM System

I have information pertaining to Amateur Radio and physical disabilities or sensory impairments, such as blindness.

Visit us on the World-Wide Web:

http://www.mtn.org/handiham/

HELP WANTED: READERS NEEDED BY HANDI-HAMS

The Courage HANDI-HAM Center needs volunteer readers to record ham radio books and publications on audio tape. Volunteer readers provide a valuable service to persons with severe physical disabilities and sensory impairments who cannot use regular printed books.

Volunteers should hold an Amateur Radio license and be familiar with hobby terms and expressions. A clear speaking voice and the ability to read the written text of Amateur Radio books and describe the diagrams and pictures are essential.

HANDI-HAMS will provide a tech sheet and a sample tape to new volunteers, as well as a copy of the book to be read and cassette master tapes. Readers will need a good-quality cassette tape recorder and a quiet place to record. Some of the books we would ask readers to tape would be ARRL license manuals, special interest Amateur Radio books, and instruction manuals for radios.

This volunteer work can be done in one's own home, at one's own pace, as long as there is a quiet place to read. It is a wonderful way to share Amateur Radio with others!

ARRL Test Engineer

My responsibilities include both QST Product Review and Advertising Acceptance testing. I also assist with the ARRL's Technical Information Service (TIS) and am very knowledgeable about research of past QST articles.

The ARRL Technical Information Service (TIS) Coordinator is now another member of the ARRL HQ staff. Please direct all TIS queries to tis@arrl.org, _NOT_ my E-mail address above.

The ARRL Info Server Sysop is now Mary Lau. See her entry for more information.

* HF
* QRP

I work QRP CW and enjoy wilderness backpacking. I am happy to meet beginning CW ops on the air and take some time to make QSO's. I love simple wire antennas and simple antenna tuners, and enjoy introducing others to these simple pleasures.

I have some experience troubleshooting the Kenwood TS 520, 830 and 440 radios. I also have experience with the older Ten Tec radios like the Triton IV, Corsairs and sometimes work on my OMNI VI. I am happy to help others troubleshoot the rigs, and am willing to take it slowly with beginners (and to find the answer from others when we can't figure it out!)

I am beginning to get interested in better fidelity SSB, and am learning about IF filter options for Kenwood and Ten Tec rigs. I have

experience with the aftermarket Fox Tango, IRCI and now INRAD filters. I am happy to share information on these options, I currently use several.

If you are nearby, or coming through the University, stop in to visit my shack, just for fun. You might force me to clean it up, and that makes my wife, KC6TKO, very happy.

Maintainer of Practice World-Wide Web Site for FCC Amateur and Commercial Radio License Exams:

http://www.biochem.mcw.edu/Postdocs/Simon/radio/exam.html
http://www.biochem.mcw.edu/Postdocs/Simon/radio/commercial.html

Users can take practice exams for the five amateur radio written exams, Novice through to Extra. These can be taken either on-line via a web page or Java applet, or off-line using exams requested via email or by downloading the Java applet and running on the user's home computer.

Practice for Morse Code is also available, including graded practice tests at variable speeds.

Commercial General Radiotelephone Operator's License (GROL) Elements 1, 3, and 8 can be practiced on the commercial exam page.

I am currently a mature student at King's College, University of Aberdeen, studying for the B.Sc. (Hons.) Computing Science. I enter the third year of this course on 25th September 1997.

I also have my own IBM compatible computer, which has a P166 processor, 32M of RAM and a total of 4.6G of hard drive space, spread between three EIDE hard drives. This computer normally runs under the Linux operating system, and I am gradually moving the above Fidonet BBS system across from MSDOS to Linux. Because of the lack of suitable software under Linux, I am writing one myself, having had 15 years experience as a professional programmer.

I am a regular participant in AuroraMUSH, a MultiUser system, and have authored several patches to the suftware controlling it. It may be visited at:

telnet://amush.cx:4190/

Status Servers:

telnet://status1.amush.cx:4191/
telnet://status2.amush.cx:4191/

I have been involved with Packet radio for over a decade now. Indeed, it was packet radio that got me interested in Amateur Radio in the first place.

I started up a mailing list connected with the Amateur Satellite world, currently using manual subscriptions. The list is:

Space.Repeater@cus.umist.ac.uk

and is for the discussion of the possibility of placing an amateur band repeater or transponder in orbit around a planet other than Earth, or on the surface of one of the other planets.

I will add that, although I can claim to be something of an expert on both Linux and Packet Radio, I am definitely NOT an expert on the two together.

+ I am into some digital modes such as RTTY, PSK-31, SSTV,
+ Hellschreiber, CW, and packet. I like to design antenna types and try
```

```
+ to see if they will work, and if they don't work, try to MAKE them
+ work! I have done sone QRP, but not as much as I like to do other
+ things like DXing and especially CW. I also have 2 meter SSB and enjoy
+ working meteor scatter when there is a nice shower. I like to provide
+ emergency communications and also communications with public events. I
+ am also trying to get into laser communications. I know a lot about
+ it, but have never taken the time to get all the stuff that I need for
+ it. I am quite experienced in the computer field also. I have repaired
+ many computers for our school, both electronically and with
+ configuration of software, I am also really good with networks.

I have heard it happen here (I could not help (but answered) as I was on a
bicycle at the time).

Welcome to ham radio-set your watch back 40 years

Please visit my World Wide Web Site, you have never seen a page like it.
You will see:

1. How to pass the A+ Certification
2. Really interesting answering machine messages
3. A blond naked chic being held by a female ham!.
4. How you know you are a ham.
5. Hear Ted Kennedy really screw up in front of Clinton
6. Actually sounds of Bill Clinton "after the lov'in".
7. The writings of me and others on ham radio, hear a typical ham contact.
8. The warm side of K1OIK, hear me speak, see me with famous people.
9. An amazing card game that will shock others
10. Pictures of me and my family.
11. Did common German's enable the holocaust?
12. See now the future of ham radio.

Burt Fisher

So the guy calling in your area DID get an answer right? You knew no one else on any other repeater you could have hooked him up with? Your not a member of any repeater that has autopatch or know any other ham that could have brought it up for him? Your reply sounds as unbelievable as the original post.&#65533; By the way I received a really nice email from your daughter Samantha talking about the scholarship applications, very polite and well written, she must get it from her mother.

Are you all nuts??? The SAME trouble makers are STILL around on amateur radio!! WA9KJI still jams 3950. K5BLB gets a little warning shot over the bow.

Down on 14313, a couple of guys take a re-test and bingo! Back causing trouble! And I will bet ANYONE next weeks paycheck that WB2OTK will be back on the air, his record wiped clean, in a matter of weeks!!!

You don't get it, do you! Riley is NOT one of us! He's with the government which wants our frequencies! He headed-up the last frequency auction! His purpose is to slap a few wrists, and when the serious trouble makers still won't behave, he'll cry, "I TRIED!" Then the FCC will take the frequencies from us!

Riley IS NOT here to help ham radio. He's here to oversee its death!

Fred

Hey Roger,

I will be out in your neck of the woods on the 20th, Norfolk to be exact. If you want to, we can get together and hash it out. You will have to come down to meet me however, because I am not going to waste my time waiting for you to come out of your house. If you don't want to meet, I will understand yellow belly.

Please try to respond to this with something original, and not with the usual school yard banter.

127. Go for 13wpm or 5wpm?

Newsgroup: rec.radio.amateur.misc
Date: 1999-10-04 00:00:00 UTC
From: yabyum@my-deja.com
Message-ID: <7tagvu$4vd$1@nnrp1.deja.com>
Source record: 130240

Hi there,

I got my technician's license a couple of months ago (still not on the air though), and now I'm working on learning CW.

While studying this I was wondering if it would be better to go for the 13WPM rather than the 5 WPM. I'm using the Farnsworth method at 20WPM (but 5wpm overall speed). I was thinking that perhaps studying for the 5wpm exam would make me analyze the sound patterns and would stand in the way of learning to recognize the code instantaneously. Is this fear unfounded and perhaps it's too hard to go for the 13wpm right away?

Also, would it be wise waiting to buy the books for the general and advanced licenses? I would like to take the tests within a couple of months, but I'm not sure how much longer the restructuring process will take.

73!

The rules specifically state that we, as amateurs, must operate under a shared band policy, and that we are NOT the primary service. That's just the way it is folks. It has been that way since I got into this stuff 20 some odd years ago. It doesn't mean that the band is useless after sunset. I have worked many DX stations below 7.150 MHz. Remember that CW works under those conditions.

Brent Scott
N5CLK
Austin, TX

PS. If the IRU does anything about the broadcast stations on 40, it will be to give them sole use of it. Remember these are commercial stations, and money makes the world go 'round!

Liberals love to pardon murders and terrorists. (Remember
Gov. Dukakis with Willie Horton and Bill Clinton recently?)

They will never allow themselves to show mercy and compassion
to those they preceive as political enemies. Most often the use the
power of pardon to send a political message to their enemies.

KE4TEW was best known for his constant spectrum terrorism and
now hides behind his wife's illness to avoid culpability just as
Pork Butt claims his wife sent the E mail to Hollingsworth by
mistake. (Remember Clinton's moral failures were recently said to be
due to the fact that his mother and grandmother gave him to much
attention.)

Write down one of my irrefutable facts: "You Scratch a Liberal and
you'll find a tyrant."

Thank you Herb for explaining how Mr Hollingsworth could pardon a known ham radio qrmer the likes of KE4TEW, Jimmy Dale. You can be sure that TEW will be watched and listened to very closely. Hiding behind illness of his family is just the thing a rat such as KE4TEW would do to continue his radio qrm program. Send E mail to Hollingsworth when you hear KE4TEW pulling his qrm act on ham radio.

I would go for the 5WPM and then you would be able to get on the air and have lots of fun on CW while you build up your code speed to 13WPM. I think you would find it goes a lot faster when you actually use it for something other than a "canned" practice session.

> Also, would it be wise waiting to buy the books for the general and advanced

> not sure how much longer the restructuring process will take.
>

I would go ahead and get the books and start getting the theory. If you are concerned about time management I would put the emphasis on CW at this point. Once you get your TechPlus and get on the air then you can hit the books between on the air time. (Hi Hi).

Good luck, hope to hear you on the air soon.

Just see how your learning goes. If you seem to be getting it, you might want to try for the 13wpm. However, nothing beats using it. If you can pass the 5wpm test then do it and get on the air at least once per day. Make at least one contact, or copy two. You will find that within a month or so you will be ready for the 20wpm.

Hi,

I just updated my webpage with the story about my M0CIL/C6A operation.
There's also a logsearch.

Pages about previous operations as PA/ON4BAM, GM/ON4BAM and KL7/ON4BAM
are also availlable with logsearch.

Comments and suggestions are welcome.

bye Maurice

I've said it a hundred times.

Why warn anyone if you have the evidence ? All the FCC is doing is establishing the parameters for just how far you can go and still not have anything done to you.

Of course, the FCC can be in its finest Democratic form when it deals with hams, most of whom are some of the saddest sacks in America, whether they like it or not. People incapable of thinking for themselves, who, ARRL thinks, are all falling for this paper war that's being waged.

This is the DNC methodology. Ignore a 30 kHz wide radar signal coming out of a Canadian military base in Newfoundland that's wiping out the CW area of 80 meters, an exclusive allocation. Go after W1WCR, as admittedly repetitive as those people can be, because they speak ill of the mental trainwreck on Pennsylvania Avenue.

In government, we see the same thing over and over; a Supreme Court ruling this week basically established the principle that if the government doesn't ask the right questions, and thus doesn't get the right answers, it is not negligent in its duties if the absence of answers injures someone.

If that isn't a case of mutual ass covering nothing is.

143. WAUSA Award

Newsgroup: rec.radio.amateur.misc
Date: 1999-10-04 00:00:00 UTC
From: k0hb@arrl.ORG
Message-ID: <37F8E342.FB196A0C@arrl.org>
Source record: 130256

I am proposing to the ARRL that they sponsor a new award which I think would encourage new participation in HF operating, and would also increase participation in SS, ARRL-DX, and other ARRL sponsored radiosport events.

This award would the Worked All USA (WAUSA) (pronounced wow'-sa) Award.

To qualify, you would have to work all 50 states, plus all populated US Territories, Commonwealths, and posessions. I would define "populated" to mean that the place has a resident (property owning) population, as opposed to islands which consist only of government owned lands such as Wake, Kure, Johnston, and Midway.

The would mean we would add KP2, KP4, KH2, KH8, and KH0. (Are any others populated?)

Credit for the award would start with contacts on Jan 1, 2000 or later, and I would also suggest a special endorsement for achieiving the award totally within the US Novice/Tech+ sub-bands.

If you like this idea, please talk it up, especially with your ARRL leadership types (Director, Vice Director, CAC rep).

73, de Hans, K0HB

144. Riley isn't a Policy Maker

Newsgroup: rec.radio.amateur.misc
Date: 1999-10-04 00:00:00 UTC
From: Sherins@webtv.net
Message-ID: <25574-37F8E3DD-40@newsd-241.iap.bryant.webtv.net>
Source record: 130257

No man is a panacea, especially when policing the hundreds of thousands that comprise U.S. ham radio. In comparison to a calcified FCC that fretted for years over what to do, Riley, a newcomer, has accomplished!

If, within the purview of his job, he met with Congress, discussed the commercializing of 220 mhz. or took part in a spectrum auction, he, still, is nontheless a servent of the FCC, which must operate within Congressional authority..

We needn't discuss Riley's politics or religion. For us, the proper study of Riley is what he set out to do and, is accomplishing. He deserves our support, as do the unfortunate affected hams, whose rights to due process must remain unabridged.

Sounds like a great idea Hans!
Good next step for the old WAS.
Would one be able to use the contacts for both WAS and WAUSA or would you purpose that each award have have to have separate contacts?

Good idea for the special novice/tech sub band endorsement.

>I'm trying to follow this thread but it's jumping all over the place.

Hey Tim, that was *last* week's debate; you can't expect me to remember
which side of the fence I was sitting on back then!

As I recall, someone, living in a fantasy world, thought, as if by magic,
there would be a sudden increase in the FCC's budget, manpower, and
time to go after each and every power amplifier violator. To stir the pot
("devil's advocate") I took the opposite view: Prohibit manufacture and
importation of easy-to-modify amps.

We can't expect the FCC to be too concerned about our problems -- our
troubles are *very* low in priority compared to those of the aero,
marine, public safety, wireless, and broadcast services.

Enjoy your Monday... =:o

No problem. We'll still have M/HF, with more of that spectrum given to
us in the future.

You seem to have forgotten that everything that's currently done on V/UHF
used to be done on our MF and HF bands. And with today's compact HF rigs,
it's even more convenient to run mobile than back then.

155. Range of handheld?

Newsgroup: rec.radio.amateur.misc
Date: 1999-10-04 00:00:00 UTC
From: al.carnali@waters.com
Message-ID: <37f90ef3.31424726@news.shore.net>
Source record: 130268

Hi,

I've been considering putting a dualband mobile in my car but have given up on it because of the need to run the power cable through the firewall. As an alternative, I've been considering getting a dualband handheld. My only concern is that the low power output will not allow for much range. What are these things usually capable of? I know that all sorts of things factor into this but what sort of real world experience have others had?

Thanks,
Al

Good advise from both Mark and Brent.

If you opt to go with 5 WPM and Tech+ don't get sucked into 10 meters or you won't do CW until the solar cycle dips out in a year or few.

What ever you do I recommend you practice copying off a radio, real conversations whenever possible. It is good practice and you sometimes find great conversations going on, even at 5-15 WPM. Good luck.

Glenn

Who care what you want to call it, the FCC dosen't care if we jam them,
so that is what I do.

Along with the ARRL. Got another letter from them today, begging me to
join, it went straight into the trash. I haven't been a member for over
20 years and never will waste my money there again. They are so cheap
they won't even pay the return postage if you join.

Most of these stations you hear are via skip, so what are you going to
tell the FCC, "well...lessee, according to the beam direction, they were
somewhere Northeast of me." A big portion of the illegal stations are
truckers on the interstate highways. They are hundreds of miles down the
road in a few hours.

>
> 2. Make sound recordings of their transmissions, and keep
> records including the date, time, and frequencies used.

And not having a clue as to the location of these illegal intruders,
what good will that possibly do?

>

> work" or that I'm "being naive."

Keeping the frequencies busy so they can't use them, call it jamming if you want, is the best way to keep them off the band. The FCC cannot possibly track them all down, it is up to the hams. These illegal operators need to know it they get on 10 meters, they are going to find inteference from stations licensed to use the band.

160. Re: Riley isn't a Policy Maker

Riley is the solution, not the problem. This man has singlehandedly done more for amateur radio enforcement in the past 9 months than the entire Commission did for several years prior to his arrival on the scene.

The problem is those higher up in the chain-of-command who control what Riley can and cannot do. As with everything, politics plays a large role here.

How about a "WAJ" ("Worked All Jammers") award for 3950? The award would consist of a bronzed whiskey bottle. Personally signed with a Sharpie marker by K5-BLAB, David Castle, Timid Timmy (the Weakie from Vegas), and Walter ("Have a Drink on Me") Miller.

Sounds to me like this is what's already happening. The FCC takes an offender like K5-BLAB, easily one of the worst offenders on 3950, and slaps his hand. They had a perfect case for prosecution here. The antics of Mr. Sidney Mayhem are well documented and confirmed, Instead, they turn him loose with nothing more than "a stern warning."

What a damn joke!

I'm addressing the thousands of well-wishers who either called, e-mailed and telegrammed asking about my whereabouts. No, Iwas not in radio prison nor banished by Riley nor censored and/or censured by AOL. I've been busy making a lot of money which you wish you had, especially the bums known as the BARF and StumpJumpers. I lost track of just about everything ham related except for a QST article about the felon from Saint Crotch,USVI, a message saying that Lloyd the Toid Davies, the simp from Athens Alabama, had to leave this USENET and one other item so insignificant, it slipped my mind. I didn't even get a nasty letter by e or by USPS from Indiana "Bullchittum." I wonder what happened to Vicious Misek, the Masturbator of Ceremonies of the Nazi Net which calls itself the "Liberty Net?" Or do they still go overboard with "The Great Liberty Net?" The last time I checked this board, Riley had told N2SAG to kiss off but in a polite way. Are those 3.950 subversive slobs still
kicking or have Riley, the FBI, ATF or local law enforcement agencies put them out of commmission? Occasionally in the mornings while treadmilling, I transmit a bit of 14.313 but the only fellow I hear is Donald Anderson,W4JYZ. That man is a pleasure with whom to converse and yes, there is someone else I hear well-that slimeball instigating troublemaking creep from Vero Beach, KT4TR. I still don't know why Riley didn't hand him his suspenders; Lord knows he deserved to be taken off and taken AWAY. I say to myself how wonderful ham radio would be if everyone modelled himself after AF2Y's operating procedures. Now you know why the FCC assigned Always Friendly 2 You to me. So that's it for now. I wish all not associated with Schoenbohm and his miserable ilk a happy October,November and December while to the "Schoenbohmites," bird dropppings on your heads.

Source record: 130311

While Riley Hollingsworth was accepting the cries and pleas from KE4TEW he should have taken a look at his actions while he was on the band engaging in some of the worst behavior in amateur radio. Not only did Riley send a message to the entire ham community that his orders are without meaning and can be altered. This represents a sad day in amateur radio when the likes of KE4tEW can be given treatment that is contary to his actions.

Riley noted in the Rain Report that he expected my Dale to behave himself and thought that he would. If Mr. Dale had the intention of doing so then can someone explain to me why he was on 14313 Sat afternoon engaging in and the activity of NU5M and KC1ZQ ??????? Not only did he engage in the bedlam that was going on he proved to the rest of the amateur community that he could not stay out of the arena and become part of the solution and not part of the continual problem.

Mr. Hollingsworth obviously does not know the real intent of KE4TEW which in my opinion is to only cause problems and contribute to the insanity. Way to go MR. Hollingsworth, that was a real mistake !!!!!

I simply want them to go away but ignoring them isn't going to do that, I've heard a lot of rhetoric from you about what we shouldn't do but I haven't heard any suggestions on what can be done. They've moved up above 28 because the frequencies are clear, no other reason. If they continue to transmit there free of interference from amateur stations legally engaging in CW contacts then they have no motivation to ever go away.

OK, but after reading your entire post it begs the question are you
really trying to make an assessment or just not happy because no one
wants to talk to you?

<edit for brevity>

> Seems that if you're not a
>"regular" here whom everyone knows, nobody's interesting in responding.

2m FM of course is local traffic so lot's of people know each other. I
try and say hello to hams passing through the area but to be honest I
don't monitor the local machine to make new contacts but rather to chat
with local friends. It's simply the nature of the band. Hang around long
enough and you'll meet people, ham radio is no different than any other
social setting. You shouldn't expect to make instant friends just
because your on the radio.

>With my faith in ham radio in question, I didn't get on the air for
>several months. Then I began traveling. Thought it would be nice to
meet
>other hams on the road, so at high points I would call CQ on 146.52

>friendly and interesting, but told me about calling on simplex 146.52,
>"nobody ever monitors that anymore". Figured I'd have better luck with
>the CB, and sure enough I did.

Well, this friendly gentleman didn't know what he was talking about, I
travel as well and have made lot's of contacts on .52 as well as
repeaters. Yes sometimes you might travel for an hour or two and no
contact but if you throw your call out every few miles you will make
contacts.

>Later that month I broke down on the side of the road outside San
>Antonio TX. I happened to know that SA has wide-area coverage on
146.94,
>so keyed up the machine (again FQ) and called CQ, then called
>"emergency" then "mayday".

Mayday should be used when life or property are in immediate danger, e.g car accident, sinking boat etc. Broken down on the side of the road is not a good use of emergency or mayday. Additionally I've been broke down before on the road, had times when I needed directions, input for a good local restaraunt etc. and have always got a call back. On a couple occasions I needed to try a second repeater to find someone but never a third! I'm wondering why your having so much trouble.

>No answer. Held down 0 DTMF key for 5 sec and
>called again, still no answer. So I check other repeaters. Only other
>one I could reach was being occupied by someone who just loved to bring

>up the autopatch unidentified, dial numbers at random, then bring it
>down, over and over. Listened a little longer and found it was a kid
>playing with the autopatch.&#65533; So I call 146.52, since I'm on an
>interstate (must be hams on the road, it's a holiday weekend). Called
>till blue in the face. No response there either. Gave up. The CB
brought
>a tow in about 5 min.

Then dump your HT and keep the CB. I find it Really hard to beleive you couldn't raise someone on a local repeater to help call a tow truck.

>So I guess my point is that I don't want to hear any more of the
>"long-timers" whining about ham radio being a "dying breed", and that
>nobody in the 20-40's is interested any more.
&#65533;

>I'm a very
>technically competent, friendly, and personable individual, and I
>felt as though I had something to contribute by being involved in ham
>radio. There was someone that WAS interested (me), and tried earnestly
>to get involved and participate, but frankly, I find more responsive,
>friendly, and helpful people on CB.

Then you should stay in the CB bands, ham radio isn't for everyone. I haven't heard anything about not getting a CQ answered on 7040 KHz, do you operate any bands other than 2m? If your judging the entire amateur community on your experiences with 2m FM then you probably haven't spent enough time learning what the hobby is really all about. Also, try posting with a regular email return address, anything comming from deja.com is immediatly subject to an S-5 or better on the Troll-O-Meter.

&#65533;

I'm trying to follow this thread but it's jumping all over the place. Jeff I really disagree with you on this one, if I understand your argument correctly. Many of the CB amps I see on the market are built in small job shops and sold under the table though hundreds of different outlets. I can't imagine that you could prevent the manufacturing of such amps, and can't see much difference in individual enforcement or going after manufacturs seems to me the operators would be much easier to find using DF than locating an underground mfg. Since alchohol was mentioned seems I recall a ban on the manufacturing of it too but anyone who wanted a drink got one.

>any solutions to the problem.

And what "word games" are you referring to? The FCC originated the
statement, "It's impossible to jam or interfere with an unauthorized
transmission." I'm only repeating their words.

I've offered my solution to the problem: Carry on legitimate CW, RTTY,
or data QSOs on 28005, 28015, 28025, et cetera; and my solution coincides
with what the FCC recommends.

That works fine during the off-years of the sun-spot cycle. DF'ing is a well-respected technique of the amateur community. But we generally don't fox-hunt HF DX. There is too much error in determining the LOP of a sky-wave signal.

>Report these incidents--complete with tapes and detailed
>records--to the FCC and demand that they take enforcement action.

Against whom? You're attempting to DF DX whose identities are next to impossible to determine.

>Look at the
>recent results of the complaints concerning the activities on 3950--if

* The identities of such operators were known in advance.
* These operators were concentrated on a single frequency which had a large listening audience.
* Their activities were an international embarrassment which could possibly have resulted in negative consequences during future ITU conferences.
* The net in which these operators participated in has political overtones.

>I'm "being naive."

I finally agree with something you've said. ;)

The lack of amateur activity on the lower end of 10m has resulted in the intruders taking up residence there. The simple solution to this problem is for us all to spend some time there on a weekly basis, just as you'd chase an intruder from your home.

Here's a man who shouts the ham gospel from the treetops. I trust the rest
of
you right minded guys send some kind of congratulatory message to Riley, he
deserves a pat on the back for sticking his neck out, successfully clearing
out
the people who have been depositing rubbish upon the hobby of amateur
radio for years. The only thing left to clear up now is story behind the
cynical
entrapment of the good guy in the long saga of abuse and how the
Clinton Clan managed to get away with their shenanigans in the first
place...

It really has become a pleasure to listen in to sane discussion on 313 since
the Clinton Tooth Fairy became conspicuous by his absence. The rest of the
listening world can sleep peacefully, content in the knowledge that the
hobby is now back in safe hands again... I wonder if Riley had a quiet word?

A Brief Historical Overview

If there is any one constant in the changing state of the
communications art, it is that "Hams" (Amateur Radio Operators) have
always been on the forefront of it. Rumors abound where the term "Ham"
came from. Some of the more amusing are described in the list of
Frequently Asked Questions for this newsgroup.

Regardless of origin of the name, a "Ham" is universally recognizable
as one who experiments in radio and communications.

Whether it be constructing a low-power CW radio with vacuum tubes, or
designing TCP/IP packet networks, such experimentation has
historically spilled over into the mainstream such as was the case
with Howard Armstrong, who developed the regenerative oscillator and
FM radio, or General Curtis E. LeMay (K0GRL, W6EZV) who was
instrumental in making Single-Sideband the communications standard for
the Strategic Air Command (1946-1992, now reorganized into a joint
command called USSTRATCOM) and eventually the U.S. Air Force. Although
packet-switching techniques originated from DARPA (Defense Advanced
Research Projects Agency) and the ARPANet, no one can deny the

tremendous influence that amateurs, including those within TAPR (Tucson Amateur Packet Radio), have had in demonstrating the viability of TCP/IP and AX.25 communications via radio links. The efforts of AMSAT (the Amateur Satellite Corporation), including the development of many ham satellites and the low-orbiting Microsats (communications satellites no bigger than a breadbox that use store-and-forward packet techniques), have certainly advanced the state-of-the-art in communications, one of the defined purposes of the Amateur Radio Service, as recognized by international treaty.

What is an Elmer?

Since in many cases hams are writing "the book", there is often no "book" or other established reference for a beginner to refer to. Traditionally, information has been passed on from ham to ham via word-of-mouth. Like many of the traditional crafts, a variation of the Master-Apprentice system has emerged, the Elmer-Novice relationship.

The term Elmer has probably been in use since at least the 1950's (I'm told, but haven't yet confirmed, that it appears in British amateur radio publications from that period). The name Elmer was likely chosen because Elmers are usually older and wiser, having the benefit of many years in the hobby, including several failed projects, and an electric shock or two. The first U.S. reference to Elmer in print was from Rod Newkirk, W9BRD, in his "How's DX" column in QST from the early-to-mid-1970's.

Such Elmers have traditionally been the mainstay of amateur radio, and the source of many new hams, particularly those interested in working on emerging technologies. Even more importantly, Elmers provided an outlet for the impatient newcomer who wanted "to know everything, and right away." Faced with such a request, a good Elmer will smile and proceed to lead the novice through some project or operating experience. Several hours, days, or weeks later, the novice would have his answers, but would have earned them. Even better, the sense of accomplishment would boost the novice's confidence and nudge him or her down the road to being a model, experienced ham operator.

Many present hams feel that such an experience is missing today. In today's hustle-bustle world, the response to such natural curiosity and desire to learn is, more often than not, "I'm too busy" or "RTFM." As a result, the quality of new hams declines and the knowledge and operating habits they develop in their first formative months and years leave much to be desired. And the very same hams who claim that they "can't understand the new generation" also, in almost the same breath, lament about the "decline of amateur radio."

What is an Elmer Today?

An Elmer today is of any age, male or female, who has some expertise and is willing to share it with beginners. Elmers don't even need to be licensed amateurs, just people with knowledge in some area of electronics or communications technology.

How do I become an Internet Elmer?

With the ever-widening scope of the Internet, the amateur radio newsgroups on Usenet, and now the World-Wide Web, the potential for Elmers to share their knowledge to a wide audience has never been greater. To that end, I maintain a list of such Elmers. Volunteers may register via my formatted, on-line, World-Wide Web Registration Form:

http://www.novia.net/~pschleck/elmers/register.html

I would prefer that you register using the above form (which not only ensures that nothing is omitted, but also makes adding your entry much easier by automatically converting it to HTML). However, volunteers who are not yet on the Web are also quite welcome, and may register by writing me at elmers-request@novia.net with their name, amateur radio callsign(s) (if any), E-mail address, and area(s) of expertise. URL-format pointers to resources they maintain, such as WWW home pages, FTP archives, mail servers, or mailing lists, would also be quite welcome. The list has gotten large enough that there should be plenty of suitable examples to model your entry after. If you need some further assistance formatting your entry, drop me a line and tell me a bit about yourself. Ironically, sometimes the best Elmers write to me saying, "I'm not an expert, but..."

I have set up an administrivia mailbox for correspondence related to this list (elmers-request@novia.net, the default Reply-To: of this message when posted to Usenet News). I would prefer that all such correspondence be directed to that address. In addition to saving it into a special folder, my incoming E-mail filter will also send you an automated return-receipt.

Also, an unfortunate increase in the amount of unsolicited junk-mail that I receive (often dozens of messages _every day_) has forced me to become much more ruthless about filtering incoming E-mail. While I can guarantee that I will read all mail sent to elmers-request before the next bimonthly posting of the list, mail sent to pschleck may not only not get reviewed for some time, my incoming mail filter (procmail) may even bounce it back to the sender if it can't be automatically categorized as originating from known, friendly senders or have known, welcome keywords in the headers (Elmer is obviously one of those keywords).

How may I obtain the latest copy of the Elmers List?

There are currently 5 ways of obtaining the Elmers List. Any site at least reachable by Internet E-mail can use the Mailing-List or Mail-Server options:

World-Wide Web (WWW):

This is the recommended method for accessing the Elmers list, as it allows this resource to be viewed as hypertext. The home site at www.novia.net features immediate updates each month, hypertext-linked subject and geographic indexes, keyword searching, and registration and feedback forms. The other two sites use automatically-converted versions of the Usenet news articles, but are still usable, particularly if you are outside North America. The site marked with an asterisk also offers Wide-Area Information Service (WAIS) index searching by keyword for all Usenet News FAQ's:

* http://www.novia.net/~pschleck/elmers/
* http://www.lib.ox.ac.uk/internet/news/faq/rec.radio.amateur.misc.html
* http://www.cs.ruu.nl/cgi-bin/faqwais *

(_Note:_ Because of maintenance problems - FAQ documents not being promptly updated in particular - the sites at Ohio State and Smart Pages are no longer recommended for accessing a current copy of the Elmers List and have been removed from the above list.)

see also the newsgroups under comp.infosystems.www.* (I haven't listed URL's for all of the newsgroups under this hierarchy as there are now about a dozen of them (!!!).)

Usenet News:

This was the original distribution medium for the Elmers list. It continues to be supported for users who cannot access the World-Wide Web. Since the document uses URL's throughout, the news article version may also be viewed as hypertext via some mail and news readers. The latest copy of the list can be found in the news articles with Subjects like _"Amateur Radio: Elmers Resource Directory Part */* [*-*]"_ (The * represents a wildcard character, as the need to split the list evenly, as well as keep all parts under the 64K message limit for Usenet, requires that I adjust the split occasionally). Since the list is cross-posted to the following newsgroups:

* news:rec.radio.amateur.misc
* news:rec.radio.info
* news:rec.answers
* news:news.answers

on the first Monday of each even-numbered month, with an expiration date 10 weeks into the future, there should always be a copy available at most news sites. Check your newsreader documentation for information about reading previously-read articles or articles that are "threaded" to this one. Also complain to your local news administrator (E-mail to "news@localhost" or "usenet@localhost") if your local news server is configured to ignore Expires headers (and thus prematurely delete the articles) in worthwhile, mostly moderated, information newsgroups like those listed above.

Anonymous FTP:

If your site is directly connected to the Internet, you may retrieve the latest copy via File Transfer Protocol (FTP) from the following sites:

* ftp://ftp.novia.net/customers/pschleck/elmers/
* ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/elmers/
* ftp://ftp.uu.net/usenet/news.answers/radio/ham-radio/elmers/

Mailing-List:

Since the list is cross-posted to rec.radio.info, the latest copy may be obtained from the mailing-list gateway for that newsgroup (along with many other informational articles about radio) when it is published each even-numbered month. To subscribe, send E-mail to:

listserv@ucsd.edu

and in the BODY (not the Subject) of the message, write:

subscribe radio-info

The server may not be able to determine your return address. In that case write:

subscribe radio-info (your E-mail address)

You should get an acknowledgement very shortly.

Mail-Server:

If you don't want to read through the entire gateway of rec.radio.info, or want a copy of the list right away, send E-mail to:

mail-server@rtfm.mit.edu

and in the BODY (not the Subject) of the message, write:

send usenet/news.answers/radio/ham-radio/elmers/README
send usenet/news.answers/radio/ham-radio/elmers/index/subject/part1
send usenet/news.answers/radio/ham-radio/elmers/index/subject/part2
send usenet/news.answers/radio/ham-radio/elmers/index/geographic
send usenet/news.answers/radio/ham-radio/elmers/list/part1
send usenet/news.answers/radio/ham-radio/elmers/list/part2
send usenet/news.answers/radio/ham-radio/elmers/list/part3
send usenet/news.answers/radio/ham-radio/elmers/list/part4
send usenet/news.answers/radio/ham-radio/elmers/list/part5
send usenet/news.answers/radio/ham-radio/elmers/list/part6
send usenet/news.answers/radio/ham-radio/elmers/diff

and the latest copy of the list should be sent to you E-mail within 24 hours (the mail-server uses batch priority to reduce system demand).

Acknowledgements

By using this resource, you are benefitting the net by obtaining assistance in the fastest and most efficient way possible. By volunteering to appear on this list, you are contributing to the good reputation of the radio-related newsgroups.

Thanks to all the volunteer Elmers, as well as courteous list users, for making this service a success.

John Ackermann N8UR

jra@febo.com

http://www.febo.com/

My primary interests are in packet radio network building
(particularly higher speed stuff) and TCP/IP. I've got quite a lot of
info on using the Kantronics D4-10 19.2kB radios, as that's the
hardware we've been struggling with here.

I'm now working heavily with Linux, and help run a TNOS/Linux BBS, and
a Linux native-AX.25 switch. Although I'm not "the world's greatest
authority" on either, I'd be happy to help folks with questions to the
extent I can.

I've developed some experience with full-duplex packet repeaters. I've
built 2 19.2 repeaters, and am working on a 9600 Baud one now.

My World-Wide Web Page above has a reasonable set of resources for
digital networking, including HTML versions of some of my work,
sample configuration files for Linux AX.25, and some Linux software
tools, as well as the Ohio IP address coordination info.

I've just finished writing a book on TCP/IP that TAPR will publish
(hopefully) by the end of the year. It'll be called _Networking
Without Wires_ and is a completely rewritten, and greatly expanded,
version of the old _IntroNOS_ document I wrote several years ago. In
the meantime, I've made the old _IntroNOS_ available in HTML format on

my World-Wide Web Page above.

TAPR (Tucson Amateur Packet Radio) has formed a special interest group to discuss issues of regional packet networking (Net-SIG). As a result, the TAPR net-sig mailing list was born, and is now ready for operation.

This list is <not> intended to replace any of the existing packet-related mailing lists. Its purpose is provide a medium for communications among those interested in packet radio networking, both dealing with technical issues and political/regulatory ones. We'll discuss things like how the potential 219MHz band will fit into the networking picture, how to link areas using different networking schemes, how to set network parameters, etc. The list's charter will be posted there regularly.

The address of the list is net-sig@tapr.org and you can subscribe by sending mail to listserv@tapr.org with the text "join netsig".

Apart from subscribing to the list, you can contact me for further details about the Net-SIG (including upcoming conferences).

TAPR Vice President and Board Member

Joint ampr.org IP Coordinator for Ohio subnet (44.71.xxx.xxx)

Please direct all correspondence regarding the assignment of ampr.org IP numbers in Ohio to:

ipaddr@febo.com

which is a mailing list read by a team of coordinators.

[_Editor's Note:_ All ampr.org coordinators are listed in the document at:

ftp://ftp.ucsd.edu/hamradio/amprnets

Contesting is my favorite activity. I operate as many contests as possible, mainly on phone. I do operate CW often on the HF bands. Field Day is a big deal for me. I have been Field Day coordinator for two different groups in the past two years, including one in Mississippi that used my callsign this past year. I operate mostly on the HF bands, especially ten meters.

I am experienced with IBM-compatible computer systems, as well as packet radio networking and BBS systems, specifically MSYS. I am also experienced in APRS. I familiar with repeaters and controllers, specifically the CAT-300 (DX). I am also involved in the recruiting and licensing of other youth, and am planning classes for local Cub Scouts/Boy Scouts.

I am into some digital modes such as RTTY, PSK-31, SSTV,
Hellschreiber, CW, and packet. I like to design antenna types and try
to see if they will work, and if they don't work, try to MAKE them
work! I have done sone QRP, but not as much as I like to do other
things like DXing and especially CW. I also have 2 meter SSB and enjoy
working meteor scatter when there is a nice shower. I like to provide
emergency communications and also communications with public events. I
am also trying to get into laser communications. I know a lot about
it, but have never taken the time to get all the stuff that I need for
it. I am quite experienced in the computer field also. I have repaired
many computers for our school, both electronically and with
configuration of software, I am also really good with networks.

NEWS, INFO, RUMORS, DXPEDITIONS, IOTA ACTIVITIES and more

DX CALENDAR, WABA AWARD (rules & scores) now available

in English Version and Italian Version

Same server of the IK4LZH site for QSL MANAGERS.

I am an IOTA chaser, I work DX and I join contests. Actually I'm in
love with RS sats and DOVE telemetry. I'm the Shortwave Listening
(SWL) coordinator of the Italian Amateur Radio Association and I have
a regular SWL page in their official magazine Radio Rivista. Recently
I joined the 425 gang that produces the 425 DX News bulletin. I
translate it into English and send it to many DXers via E-mail. I also
maintain a WWW page to provide the bulletins graphically with previous
numbers and more to come. I've been an SWL since 1974 when I received
a receiver as gift from my parents. Now I'm 36 and I'm running also a
free BBS devoted to HAM/SWL.

During the school year, I am in Baltimore college ARC at University of Maryland, Baltimore County, which is home of the UMBC Amateur Radio Club and KB3CVD:

http://umbc.edu/~rcarls2/hamradio/

During the winter and summer, I am in New Jersey. I am active in ARES/RACES/NTS and local clubs in both areas, and would be glad to help other young people get into the hobby of Amateur Radio, particularly in the interests of Public Service and Disaster Management.

* Callsign Data
* Mobile/Portable/Field Day (FM, HT's, 10m SSB)

I'm willing to act as a reference for anyone wanting info on getting tapes (especially Callsign tapes) from the Department of Commerce National Technical Information Service (NTIS) or wanting other info on callsign-project related stuff.

One of these days I'll actually be around for the un-net! I promise, really! (Well, maybe not. Is anyone even doing the un-net any more? If so, E-mail me and maybe we'll actually do it!)

My job is currently System Administrator for a large UNIX site so I know a little bit about day-to-day UNIX operations and UNIX installation :-) My laptop currently runs Linux most of the time (over 99% of the time). I also have much experience with constructing E-mail paths that will work rather than bounce. Currently I do software full time (yay!), and am fiddling with some laser experiments - if I could get some 'spare' time.

I also have a fair amount of experience in hardware/software interfacing and machine control.

187. Re: Go for 13wpm or 5wpm?

Newsgroup: rec.radio.amateur.misc
Date: 1999-10-05 00:00:00 UTC
From: cal25skipper <skipper3@swbell.net>
Message-ID: <uApK3.21$xG3.2311@typhoon01.swbell.net>
Source record: 130079

If you use a keyboard 100% of the time, then your method is a good one. the point of not analyzing the code is not to pay attention to what you are copying. There is no need to know what the other guy sent until after his entire transmission. Then you read what you copied. So not knowing which letter you heard is ok as long as you punched the right keys. Granted, this won't help you if you find yourself without a keyboard so do learn to copy by hand also.

In the end, you will find that you can copy in your head better than anything. I use a pencil to just keep notes ie name or some point made that I want to remember to comment about. I can even jot those notes while copying with no ill effect. It wasn't always that way, but experience pays.

Code is almost a meditation, in my opinion, you really have to relax your mind completely and only focus on the now and not that last letter or word I missed or anticipate what is coming.

> The FCC has absolutely no control over what occurs in a
>newsgroup any more than it has over what occurs in a discussion in your
>livingroom.

Legally and directly, this is true. However, they can certainly "bring pressure to bear" when the "right" people lean on them to flex their muscles and do so.

A certain argumentive and vociferous poster who worked at a small radio station in Kansas comes to mind here. Seems he had a bad habit of promoting and encouraging illegal "freebanding" and encroachment of unlicensed stations into 10 meters. The FCC tends to frown on such activities and also takes a dim view of those who promote them.

Wonder why he is no longer active on this newsgroup like he was up until 6 months ago? One day, he wrote a tearful "goodbye" letter to the group and then mysteriously disappeared. Hasn't been heard from since. I also understand he's no longer employed by the radio station.

Imagine that! <evil grin>

Note: this address does not accept unsolicited e-mail. Please contain all discussion regarding USENET posts to the appropriate newsgroup thread.

>be pretty limiting as to available frequencies and modes.

This will change soon. Given that both the ARRL and FCC endorse the current plan, Technician-Plus licensees will soon be given full General privileges. This means 5WPM for all but a few "snob sub-bands" that hardly anyone uses anyway.

Where do you get the idea that HF frequencies will be auctioned
off? We've received (WARC '79) and will be receiving more
(NTIA proposal) HF spectrum -- none will be taken away.

UHF spectrum will continue to be auctioned off due to lack of
use by amateurs. If you're *really* concerned with saving that
resource, spend more time up there than on here.

195. Mobile Installation help

Newsgroup: rec.radio.amateur.misc
Date: 1999-10-05 00:00:00 UTC
From: acarnali@tiac.net
Message-ID: <MPG.126446251501191d989684@news.tiac.net>
Source record: 130087

Hi,

I posted a message earlier this week about giving up on installing a mobile in my auto because of the need to connect the powercord through the firewall directly to the battery. I have since thought about this and wonder why that is needed in the first place.

The rig is a dual bander capable of 50W output. (Kenwood TM-G707A or Yaesu FT-90R) The Kenwood installation manual says you should connect directly to the battery. (I have not seen the Yaesu manual) Why can't I just connect this through the cigerette lighter connection which is rated for 15 Amps. 15A * 12V = 180W which seems like it should be more then enough to handle a 50W rig. What am I missing here? Has anyone had any real world experiance with this?

Any info or suggestions would be appreciated.

Thanks,
Al (acarnali@tiac.net)

I think it is SO wrong for the fcc to say you cant say certain words, and yet they dont even tell you what words these are. Go to any swap, you'll hear hams saying F this S that, c'mon people, those words are common language nowadays, words dont hurt people. And everyone has an opinion on what words they like and dont like, if you dont like them tough, change frequencies or turn the radio off. Thats my opinion.

Actually it is much easier to prove possesion than use. Thus in our legal
system where a person has to be proven guilty, law enforcement officials tend
to push for laws against posession rather than laws against use.

It is easy to prove that you've got it. Hard to prove that you inhaled. ;^)

I would seriously consider trying for the 13 right away. I learned it
at 5 wpm where I could distinguish the individual dits and dahs. I
ended up "translating" in my head instead of hearing the whole sound
as the letter. It has made getting past the 10 wpm plateau very
difficult, however I will eventually make it :)

First of all, I think you may be trying to do too much analyzing. I mean, you can't get to 13wpm or 20 wpm till you can get to 5 and then 10. Or am I missing something here. Last time I counted on my fingers and toes, all 20 of em, 5 came before 10 and 10 came before 20. Then again, maybe I'm over analyzing! Anyway, when I learned to copy 26wpm in the Marine Corps, that's how we did it.Jjust start copying down everything you can recognize immidiately without worrying about making words or phrases. That will come as your speed increases. Good Luck .

FCC Issues Stern Warning to New Mexico Ham
NEWINGTON, CT, Sep 29, 1999--The FCC has fired a warning shot over the bow of
a New Mexico ham who has been the target of complaints. The Commission notified General licensee Sidney W. Mahan, K5BLB, of Estancia, New Mexico, on
September 15 that if the complaints about his operation continue, the FCC intends to designate his station license for a revocation hearing and his operator license for suspension for the rest of the license term, April 12, 2006.

Last November 18, the FCC had sent Mahan a Warning Notice concerning his operation on 3.950 MHz that allegedly involved tapes played on the air as well as sound effects and deliberate interference to other operators.

"We continue to receive complaints and monitoring information on the operation of your station, particularly regarding profanity, obscenity, broadcasting extreme racial slurs, deliberate interference and failure to properly identify," said FCC Adviser for Enforcement Riley Hollingsworth in the most recent FCC communication. In particular, Hollingsworth said, the complaints concerned alleged interference by Mahan to "a net that attempts to
operate around 3.950 MHz on Saturday evenings"--an apparent reference to The Liberty Net.

In his letter, Hollingsworth outlined and defined FCC prohibitions against the transmission of obscene or indecent material and advised Mahan that, for indecency purposes, the FCC treats amateur transmissions "the same as commercial broadcasts."

In addition to threatening to take K5BLB before an administrative law judge if the complaints continue, Hollingsworth said the FCC planned to forward tape recordings of K5BLB on August 13, 1999, on 3.950 MHz and would request "a full explanation for those radio transmissions." Mahan's reply, Hollingsworth said, "will be used to determine what action to take in this matter."

Unfortunately.

There can't be compliance without prosecution. To attempt otherwise is a
failing of American liberal theory.

Drunk drivers are exhibit A. There is no excuse for drinking and driving
even ONCE. Yet there goes the government, giving chance after chance.
"Disease" or not, don't get in the car. They're two separate issues.

So it is with amateur "enforcement". There is no excuse for a documented
repeat performer not losing the license. The person isn't needed.

FCC Amateur Radio Enforcement Log

HUDSON, NH [UPDATE]: Extra licensee *Victor A. Misek, W1WCR,* has replied to a May 7 letter from the FCC that had expressed FCC concerns about the operation of the **Liberty Net** on 3950 kHz Saturday evenings. FCC attorney Riley Hollingsworth, K4ZDH, had written Misek to report that monitoring on May 1 indicated that **Misek's station** and **members of the group** for which he was acting
as net control **"began transmitting on top of existing Amateur communications**
that were already in progress." In his response, supplied upon request to the FCC, Misek told the FCC that other stations had yielded the frequency to the net on May 1 and that he's been "diligent in avoiding starting the net 'on top' of ongoing communications" and often moves the net to another frequency where "the jammers stalk us." Misek also has requested a copy of a tape recording supplied to the FCC that Hollingsworth used in deciding to rescind a license modification that would have kept David Castle, WA9KJI, off the HF bands for two years (see "FCC Withdraws License Modification" elsewhere on the AWE news page). Hollingsworth also had asked Misek to justify the Liberty Net's use of Amateur Radio frequencies and said the FCC "cannot tolerate deliberate jamming among licensees, including retaliatory jamming." Misek declined to justify the net's existence, citing no legal requirement in Part 97 to do so. Misek said the net was a forum "to discuss current events and other subjects," and he asked the FCC to "review perceived problems of which I am not aware, so that the net can be brought into compliance should there be a problem."

You know, Al, it's no wonder nobody at the FCC has wanted to do Amateur enforcement in the last ten years. I have a net here of whiners that want to be an **International Broadcast Station on 3950**, one of the most congested areas, and have it all to themselves, all the time, provoke everyone and use the frequency for anything in the world **EXCEPT** the basis and purpose of Amateur Radio and its allocated frequencies, and have the
government run interference for them and provide a clear channel for them, ignoring the fact that frequencies are shared. I get mail from you all every day, and handling the "Liberty Net's (excuse me, "Great Liberty Net") problems would be a full time job. You rail every night about how bad the government is,
~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~

but run to it every single day complaining, then constantly criticize and second guess everything we do. You remind me of the football cartoon, where the coach, finally tired of armchair advice
and criticism, turn to the spectators and yells "You, in the brown jacket, go in for Number 42". All of you are starting to lose credibility with me.
I have limited time, about 45 calls a day and about 125 e mails every day, and I need to move on to real problems of Amateur Radio being experienced by people who **understand what it is for** in the first place.
Please do not contact me again.

FCC Amateur Radio Enforcement Log

HUDSON, NH [UPDATE]: Extra licensee *Victor A. Misek, W1WCR,* has replied to a May 7 letter from the FCC that had expressed FCC concerns about the operation of the **Liberty Net** on 3950 kHz Saturday evenings. FCC attorney Riley Hollingsworth, K4ZDH, had written Misek to report that monitoring on May 1 indicated that **Misek's station** and **members of the group** for which he was acting
as net control **"began transmitting on top of existing Amateur communications**
that were already in progress." In his response, supplied upon request to the FCC, Misek told the FCC that other stations had yielded the frequency to the net on May 1 and that he's been "diligent in avoiding starting the net 'on top' of ongoing communications" and often moves the net to another frequency where "the jammers stalk us." Misek also has requested a copy of a tape recording supplied to the FCC that Hollingsworth used in deciding to rescind a license modification that would have kept David Castle, WA9KJI, off the HF bands for two years (see "FCC Withdraws License Modification" elsewhere on the AWE news page). Hollingsworth also had asked Misek to justify the Liberty Net's use of Amateur Radio frequencies and said the FCC "cannot tolerate deliberate jamming among licensees, including retaliatory jamming." Misek declined to justify the net's existence, citing no legal requirement in Part 97 to do so. Misek said the net was a forum "to discuss current events and other subjects," and he asked the FCC to "review perceived problems of which I am not aware, so that the net can be brought into compliance should there be a problem."

Yeah egghead, there IS NO JUSTIFICATION. So how could he. If there were an actual justification I'm sure that Wictor would have given it. There IS NONE. The "So Called" net has done NOTHING for amateur radio what soever. As a matter of fact it has hurt, degraded and is an international embarassment to amateur radio. I have heard on more than one occasion(and it's documented by many) the "So Called" net interfere with emergency communications.
Certainly Wik W1WCR refused to justify the net - HE CANNOT. NOR CAN YOU.
Nothing "good" has come from IT

While studying this I was wondering if it would be better to go for the 13WPM rather than the 5 WPM?
>>>>>>>>>>>>>>>>>>>>>>>>>>>

The general consensus seems to be to go for the 5 WPM, and I must say that I agree. You can have lots of fun with 5 WPM, and set up skeds with other people so that you can all practice your CW.

W1AW code practice is also a good place to work on your CW. 10, 13, and 15 WPM are included in both Slow and Fast CW, and will give you experience copying non-Farnsworth type CW.

I remember many years ago listening in on a (A3) conversation. The one guy was saying that he has known how to talk almost his whole life, but really had to work on his CW. So that he would not forget CW from lack of use, he always got in 3 CW conversations before going to phone.

"GREAT IDEA", I told myself, "I think I'll do the same thing when I upgrade." But my 3 CW conversations ended up lasting several hours, and then it was time to go to bed or cut the grass or something. I ended up putting the mic back in the box and storing it in the drawer, and pulling it out a few times a year just to see if it still worked.

So, my suggestion is, pass your 5 MPM, get on HF, and have some fun. And learn.

Just what indcations are talking about? The belief making the
circut of ham fests is for 5wpm general and maybe 13 or 20 wpm extra.
Indeed it seems more likely that the FCC would end code testing than
adpot the full text of the ARRl proposal
>
> Learning (and passing) 13 WPM now would guarantee full access to

assuming the 5wpm general becomes fact just what it is that
would require a second code test later? I know many do seem to assume
that the extar class licesne is or should be the goal of every ham,
but it is certainly not required

>
> The concept that the FCC is going to eliminate code testing

No poster in this thread has sugest the near future, unless you are
using a different diffinifation of near than I am. I do tend to agree
that suggesting that the FCC would either eleinate code testing at
this round (or adopt some bizare work around like NZ is said to be
considering) is unlikely. It seems quite likely to many that its will
come about by about 2005 or so, not what I call the near future but
far from being distant.

Indeed as to code speed now frankly unless one is burning to start I
suggest exploring the tech priveldges a few month to wait and see what
the FCC will come up with, but that is my opinion for what it is worth

their is a line of thought that suugests it is bad idea to learn Morse
Code below about 10 wpm due various properties of human learning, not
sure I buy the theory or not but it certainly exists. Personaly I hope
it true since then a 5wpm general will likely help show the powers
that be how unless the codes tests are

One I question the vital need to run the power cable thought the firewall. I use an Icom 207h in my truck though a lighter type power port without any problems (other than a tendecy of niece to run my battery a bit when I visit but I don't power cable through the firefire would help there)

Not familer with a lot of dual band HT's but not mving and in the open the alinco 440 pager ht has a ht to repeater range of about 6 mile (YMMV) the 5 watts of my HTX 404 was 10 to 15 miles, 2m meters at HT power levels don't seem to imporve much on the 440 hts but YMMV

233. FT-2400 bites bulbs too often!

Newsgroup: rec.radio.amateur.misc
Date: 1999-10-05 00:00:00 UTC
From: "Adam T. Cately" <atcately@bright.net>
Message-ID: <37F9E5BD.C55EA2D8@bright.net>
Source record: 130216

Has anyone else had the problem of losing the 8V bulbs that illuminate the display on your Yaesu FT-2400? Mine seem to go out at least twice a year, and it's an inconvenience to have to pull the front of the radio all the time to change them. Does anyone know of a fix for this, or has anyone experimented with your unit to stop this dilemma? Any help would be appreciated... - Adam -

234. FS: Cunningham Amplifier CX-301-A (vacuum tube) Datasheet

Newsgroup: rec.radio.amateur.misc
Date: 1999-10-05 00:00:00 UTC
From: Bill Lewis <bill@wrljet.com>
Message-ID: <7tcr7h$9m5$1@autumn.news.rcn.net>
Source record: 130217

I am selling a Cunningham Amplifier CX-301-A Datasheet
on eBay. No reserve.

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=174236210

Original datasheet for the Cunningham CX-301-A
triode vacuum tube.

This datasheet is dated 1926. It measures 4 inches
by 16 inches. The paper is yellowed from the years,
but otherwise in extremely good condition. No rips or
tears and entirely readable.

The datasheet describes the proper operating voltages
for the triode and shows representative schematics for
using the tube as a two stage amplifier and a grid return
detector.

This is a fine example of a radio collectible that is very
rare and hard to find in any condition.

235. Re: Go for 13wpm or 5wpm?

Newsgroup: rec.radio.amateur.misc
Date: 1999-10-05 00:00:00 UTC
From: yabyum@my-deja.com
Message-ID: <7td06f$u9s$1@nnrp1.deja.com>
Source record: 130218

Thank you all for your great advise. I really appreciate it!

The consensus seems to be to pass the 5wpm and then get on the air. That's what I'll be aiming for. So instead of looking for a 2 meter rig I'm now digging through catalogs for a HF rig. :) I was thinking however to try the 13wpm. That depends on when the next VE session will be and how I'm doing at that time. I guess I got a bit confused about what speed to aim for because of this book I'm reading. It's called "The art and skill of radio-telegraphy." by W.G. Piermont N0HFF. This book puts a lot of emphasis on avoiding learning bad habbits like analyzing the code etc..

Someone mentioned that he has reached a limit because of analyzing the code too much. Well, last night I realized I was developing something similar because of the method I used to teach myself code. I'm using a computer program to drill me. I though I was doing pretty good. I was able to punch the right key on the keybourd for almost 100% of the time. But after making a tape and listening to it, I realized that that's all I learned. Punching the right key. For some reason I trained myself in associating the right key with the sounds I heard, but I was not able to tell which letter I heard if I was listening to a tape without a keyboard. From now on I'll do as many of you suggested, listen to the W1AW transmission and just use the computer to as a tool to help me learn individual characters. I've been studying it now for a little over a week and got the aplhabet and numbers down. I still need to learn the prosigns and the puctuations. BTW, are the required puctuations and prosigns the same for 5wpm and 13wpm?

I'm rammbling. Sorry 'bout that. Hopefully I'll pass the test soon and can talk to you guys on the air soon. Again, thanks for all your suggestions and advise!

236. Re: 100% Modulation...?

Newsgroup: rec.radio.amateur.misc
Date: 1999-10-05 00:00:00 UTC
From: Gord Skiffington <skiffing@nbnet.nb.ca>
Message-ID: <37F9576D.518E@nbnet.nb.ca>
Source record: 130219

I'll take a stab at this also - 100% modulation describes the condition of mixing (also modulating) of one signal (often linear audio but not limited to that) with a carrier (often Radio frequency or RF) signal such that the resultant uses all of the "available" carrier power WITHOUT distortion of the original intelligence (the modulating signal). In a common example of a sine wave being used to modulate a radio frequency carrier, the audio level (or modulation level) may be increased to the benefit of increasing RF power up to the point where any further increase causes the resultant RF signal to now not appear sine.....this is know as 100% modulation. Can increasing the modulation level effect an increase in RF power after this point - yes....is it distorted - yes....sometimes this is done intentionally by compression to enable higher average transmitted power BUT at the tradeoff (distortion) of some parameter of the audio (the change in our speech level - one of the things that makes us sound "natural"). For this explanation there are a hundred variations and other examples but the basic idea is that the modulating signal changes the modulated signal to a maximum amount WITHOUT distortion.

Hope that helps

Gord Skiffington - VE1AJF

Better yet, buy a cheap cellphone antenna for $15 or so and mount it in the
hole. If anything, it actually makes the car worth *more* these days since the
new owner now has a "custom" cellular antenna instead of the tacky-looking
magnet or glass mounted ones.

Riley truly wants to clean up the ham bands and save the service for future generations. He is a ham first and an FCC official second. His motives are pure.

Having said that, I cannot help but to question the motives of those above him. Is it not possible they may be setting Riley up for failure? Why would they do this, you ask? Simple. $$$$$. The FCC can then say "Hey, we tried to clean up the ham bands, but it's beyond our control." Next step: enter Congre$$ to auction off our bands to well-heeled commerical interests.

Hello. I have used handhelds in cars since 1987. My Question is why do you have to go through firewall? You can , or someone can help you go through your fuse box for power. Antenna wires on my cars are fed through the back seat wall then under the seat, under the rug or just under a floor mat. I did put in a FT 8500 dual band in my Geo Prism when I retired last year. I still have a Yeasu FT50R set up by the emergency brake also. I use two antennas both are 5/8 wave for distance. They work great during our tornadao and severe storm seasons. I use one rig to monitor and talk to netcontrol and the other one to talk to storm chasers in counties where the storms are coming from. Love this system. I also have a handheld Bearcat trunk tracker II up on the dash and use my cell phone antenna to monitor local 800Mhz traffic. All compcat for a compact!!! To beef up my FT50R I have a dual band power amp under the seat. Like I said I have been doing this since 1987 with no problems. Remember this.....a mobile rig is just a handheld rig with a big heat sink.....good luck.....DE N9IPA<konstans@geocites.com> wrote in message news:vqH5N33mFJgUmoJZj61cOnvuJGKp@4ax.com...

>And to say that in 1921 we were told to control ourselves in a misuse of
>that quote.
>It meant don't interfere with ship traffic, don't interfere with
>military traffic if you want to exist.

No it didn't. Regarding the 1921 on-the-air situation:

"It had been seen that the enforcement of the laws regarding radio
amateurs following the 1912 law was largely self-mandatory. The
200-meter restriction, the power restriction, even the licensing
requirement, existed to a considerable extend in name only..."

"...After the war...a Republican Congress declined to give a
Democratic administration adequate funds for the conduct of such
services as radio inspection and administration. This produced a
somewhat anomalous situation. Obviously the growing number of
amateur stations must be regulated..."

Hence that government ultimatum to amateurs:
"We can't control you, but you must be controlled if you are to
exist; therefore, control yourselves, or cease to exist."

>It meant collect your own information on losers for prosecution.

No it didn't. See above.

>It didn't mean here's a license, off you go, we're doing nothing.

Yes it did. See above.

At that time, every legislative session saw bills to eliminate amateur
radio, to make it "cease to exist." (Only because of the ARRL's lobbying
efforts were such bills repeatedly squashed. The ARS exists today due
to the ARRL.)

(Quotes taken from DeSoto's "200 Meters and Down," a history of ham
radio.)

Possibly this time when Riley calls him and tells him that they have GPS indications from the jamming in his neighborhood that he can come up with a better answer than last time. The old pass the buck on to someone else is not going to work next time. Mr. Hollingsworth has been informed about Doc and is lurking to show the effectiveness of the GPS tracking system. Go to GPS on your search engine and read how effective it is, within a few feet, so Doc try a better answer next time. "IT was someone in my neighborhood" will not work!!!!!

Date: 1999-10-06 00:00:00 UTC
From: amer2267@my-deja.com
Message-ID: <7tfcs2$k1s$1@nnrp1.deja.com>
Source record: 130035

Hello all
I just passed my 5wpm code test after about 2 monthes
of practicing every couple of days. Many thanks
to a member of our club who helped in my code
practice. My question is this ? Some people are
advising me not to continue that I will be
grandfathered into the general class license soon
because of the new laws. Should I take this to
the bank or could I be holding my hand on my ass
for awhile waiting or should I continue on with
my code practice to get the 13
Any help in reference to this would be appreciated
When will this go into effect if it does etc
Also can someone advise as to what methods I should
use now to get the the 13 wpm if I am going to
continue Tapes websites etc
You people have been great so far with your advice
I really enjoy the hobby and look forward to working
the hf bands
Thanks loads

You got that right Brewhead. Ole "Bannana Nose" Swartzidiotbarg is
still qrming on twenty meters, It is about time Riley made his move and
put the hush on the Clifton Slimeball AF2Y.

I'm learning it at the speed of 20 wpm at this time (spread out to 5 wpm).
Thanks for the tip on the code test. I was wondering about that. I too would
expect they would transmit on "true" speeds.

You should know by now that ARRL, driven by contesters who only use CW in the extra parts of the bands and are hypocrites, are angling to ensure that people like yourself will be members. They will do this by craftily supporting reduced requirements under the guise of "the FCC forced us to" while slyly stealing away to an area the new comers will never see, the fast CW areas.

In this way, ARRL can continue its sleaze practice of hiring contester cronies who have recently retired, and protect their pension funds to ensure new radios and multiple 100 foot towers in the CT hills away from "duh big cibby" for years to come.

Why, I understand K1ZZ has been on PEI so much he's considering becoming a Canadian, once his stint as lead pontificant at ARRL is over.

My advice...

Although it is "possible" that you'll be grandfathered, this is based only on the ARRLs recommendation to the FCC, not on the FCC's own proposed changes. You can not take it to the bank. Nor can you count on any particular timing.

Also, if you pass the 13 wpm, you're all set for when (if?) you decide to advance to the extra class, since they are VERY likely to reduce the code requirement for that class to 13 or even less (12).

Lastly, you're on a good track, why lose your inertia. Yes you could pick it up again later, but why not get it out of the way.

Good luck, whatever you choose, and welcome to the best hobby on the face of the third planet.

I would continue. You should think about that:
What you've got as a gift, isn't the same, as when you worked out that
by yourself. You learn the CW _only_ for yourself, for nobody else.
And if you have at least a minimum of speed, it may be very much
satisfaction and fun to do cw qso's.
I would continue.

> the Arthur Collins Memorial station.

Holy frijoles, you patriot basher!

Goldwater was a patriot and his station was used to
provide a much appreciated link to home for other patriots
serving in a shitty place which many of them died in.

Art Collins was a money-influence-suckup who sold
overpriced-to-start-with amateur gear for even higher
prices to military units where it fell apart when needed
most. If he donated gear to Goldwater (which I doubt) it
was only to gain favor in military procurement circles.

It is cowardice to smear someone like Barry Goldwater
while hiding behind "I'm not sure of my facts". You are
a small and hateful person, Mr. W2ILP.

Hi,
I would like to know the uses of a 40 channel CB Transceiver. And
also what exactly this device is. I believe it is a 2-way communication
system. Does this also behave as a radio? Just curious to know if it can
be used in emergency (say..if you are trapped in a car in snow...).

I understand that one can't dump 10 pages of text in here...so, if I
can get a web site which answers my questions...it would be helpful.

Thanks,
Vathsan.

Hi,
I would like to know the uses of a 40 channel CB
Transceiver. And also what exactly this device is. I believe it is a
2-way communication system. Does this also behave as a radio? Just
curious to know if it can be used in emergency (say..if you are trapped
in a car in snow...).
I understand that one can't dump 10 pages of text in here...so,
if I can get a web site which answers my questions...it would be
helpful. But, if you can answer to the point...cool.

Thanks,
Vathsan.

Next time you replace the bulb, try putting a general purpose silicon
diode in series. That'll drop the applied voltage by about a half volt
(.6) and may help.

From: Burt <k1oik@yahoo.com>
Message-ID: <7tgq1i$bf8$1@autumn.news.rcn.net>
Source record: 130062

Here is the list of stressors, along with their relative weights, from Drs. Thomas H. Holmes and Richard H. Rahe, psychiatrists at the University of Washington Medical School. K1OIK made certain additions:

Event Relative Rating
Talk to an attractive female direct 200
Talk to a female on the air 103
Forced to sell rig 102
Theft of rig 101
Death of spouse 100
Ham takes a bath or shower 100
Antenna falls 100
Try to fix own rig 99
Spouse walks into ham shack 99
Divorce 73
Receiving a packet message 69
Marital separation 65
Jail term 63
Death of close family member 63
Sending a packet message 54
Personal injury or illness 53
Listening to a repeater 52
Marriage 50
Fired at work 47
Marital reconciliation 45
Retirement 45
Change in health of family member 44
Pregnancy 40
Sex difficulties (all hams have this) 39
Gain of new family member 39
Eyeball "QSO" 34
Change in financial state 38
Death of close friend 37
Death of a ham friend 01 (all hams are dead anyway)
Change to different line of work 36
Change in number of arguments w/ spouse 35
Change in number of QSOs 33
Mortgage over $10,000 (!) 31
Foreclosure of mortgage or loan 30
Change in responsibilities at work 29
Son or daughter leaving home 29
Trouble with in-laws 29
Outstanding personal achievement 28
Outstanding ham achievement 67

Wife (spouse) begins or stops work 26
Begin or end school 26
Change in living conditions 25
Revision of personal habits 24
Trouble with boss 23
Trouble with rig 87
Change in work hours or conditions 20
Change in residence 20
Change in schools 20
Change in recreation 19
Change in call sign 99
Change in church activities 19
Change in social activities 18
Mortgage or loan less than $10,000 17
Change in sleeping habits 16
Change in # of family get-togethers 15
Change in code speed 15
Change in eating habits 15
Vacation 13
Christmas 12
Minor violations of the law 11
Receiving a QSL card 09
Ham's child dies 07

Feel free to make additions and I will update the list.

Welcome to ham radio-set your watch back 40 years

Please visit my World Wide Web Site, you have never seen a page like it.
You will see:

1. How to pass the A+ Certification
2. Really interesting answering machine messages
3. A blond naked chic being held by a female ham!.
4. How you know you are a ham.
5. Hear Ted Kennedy really screw up in front of Clinton
6. Actually sounds of Bill Clinton "after the lov'in".
7. The writings of me and others on ham radio, hear a typical ham contact.
8. The warm side of K1OIK, hear me speak, see me with famous people.
9. An amazing card game that will shock others
10. Pictures of me and my family.
11. Did common German's enable the holocaust?
12. See now the future of ham radio.

Exellent point!!! You certainly have hit the nail on the head. Why didn't Mr. Hollingsworth just simply tell Mr. Dale that he would give him 30 more days to retest and hold him accountable for his actions. Now the individual hides behind the so-called sickness of his wife. Why didn't Mr. Hollingsworth simply do what was in the best interest of amateur radio and hold individuals accountable for their actions. As I recall Mr. Hollingsworth was subject to the filth and sexual perversion that was being spewed out of the mouth of KE4TEW.
The ARRL should ask Mr. Hollingsworth just exactly what could be accomplished by the pardon. Obviously we have all been let down by the decision of Mr. Hollingsworth and I also remember when a ham lost his wife due to cancer and Mr. Dale was on the air telling the individual to "Dig her up and perform sexual acts on his deceased wife". Maybe Mr. Dale should be reminded of this during his wife's sickness. Mr. Dale should be punished for his actions on amateur radio. Maybe Mr. Hollingsworth is comfortable with his decision, but what good did it do for amateur radio ???

Hi,
Learn each characture's sound at 15-18wpm instead of 5. That's if
your starting rom scratch. I wish I did that, I didn't and learning at
5wpm made it harder to get to 13.

Tip 2, if you go for the ARRL 13 you better be able to copy 18wpm,
that's the speed they send the charactures, they space them out
further but it doesn't help much during the test. I know, I failed it
this spring. If they sent it at TRUE 13wpm (they way they SHOULD send
it) I would have passed it. I did pass the written though.

73,
Tom

You know, Al, it's no wonder nobody at the FCC has wanted to do Amateur enforcement in the last ten years. I have a net here of whiners that want to be an **International Broadcast Station on 3950**, one of the most congested areas, and have it all to themselves, all the time, provoke everyone and use the frequency for anything in the world **EXCEPT** the basis and purpose of Amateur Radio and its allocated frequencies, and have the **government run interference for them and provide a clear channel** for them, ignoring the fact that frequencies are shared. I get mail from you all every day, and handling the "Liberty Net's (excuse me, "Great Liberty Net") problems would be a full time job. You rail every night about how bad the government is, but run to it every single day complaining, then constantly criticize and second guess everything we do. You remind me of the football cartoon, where the coach, finally tired of armchair advice
and criticism, turn to the spectators and yells "You, in the brown jacket, go in for Number 42". All of you are starting to lose credibility with me.
I have limited time, about 45 calls a day and about 125 e mails every day, and I need to move on to real problems of Amateur Radio being experienced by people who **understand what it is for** in the first place.
Please do not contact me again. >>

Yes it has merit in a case where there hasn't been enforcement, but with
these repeat performance artists, it's a joke.

And to say that in 1921 we were told to control ourselves in a misuse of
that quote.

It meant don't interfere with ship traffic, don't interfere with
military traffic if you want to exist.

It meant collect your own information on losers for prosecution.

It didn't mean here's a license, off you go, we're doing nothing. That's
a Democratic party tenet- issue more official papers and don't enforce
what's already there.

Ah excuse me. Oct.18th is coming fast and I believe on that day, Herbie's lawyer Lauren Bacall is scheduled to present anal arguments to convince the powers that be that KV4FZ deserves to be relicensed in order to jam emergency traffic and harass nets and net members and spread anti-Semitism and to libel and slander and so forth and so on. Aren't they convincing enough to keep Herbie on forever? I'm sure the judge will agree with Lauren and not only order the FCC to commit suicide but to award KV4FZ the Eichenlaub mit Ritterkreuz W.W.II German medal. Goodbye Herbie!

The requests to stop collection have it; one wonders if the 38 percent who voted in favor of FCC tagging your financial records for a 2 bit ham license they can't even enforce are the same people who responded to the recent Marine Corps poll on shooting their fellow citizens if ordered, in the affirmative.

I really wish more people WOULD get onto the bands above 148 MHz. I have
equipment for VHF/UHF/microwave bands through 10368 MHz, but there's no
one to talk to on a regular basis up there! I want to keep those bands.
I enjoy their uniqueness. But I need more company! The equipment isn't
really that hard to build, with the no-tune transverters.

Jeff, as you probably already know, the former holder of your callsign,
Bob Jones (an old friend of mine) was a "big gun" on 432 EME for a while.
I assume you're keeping with the tradition?

Top ten uses of "mayday" on ham radio (from the French 'm'aidre' meaning help me).

10. MAYDAY what's is the talk in for the flea market ?

9. MAYDAY my HF radio killed my battery and I can't leave my driveway

8. MAYDAY I'm passing through the inner city at midnight and can't find a restaurant other than Burger King.

7. MAYDAY I'm in desperate need of an authorized Yaesu repair center because CQ WW SS is tomorrow

6. MAYDAY MAYDAY what does that mean, I'm a new codeless ham ?

The following are actual calls heard:

5. MAYDAY we need an ambulance here because we've broken a toe and I've called 911 but it can't come because of the 8 foot snow drifts

4. It's MAYDAY, did you see the parade in Red Square ?
ACTUAL REPLY HEARD ON HF: Is someone having an emergency ?
REPLY TO THAT REPLY: Stand by stand by there's emergency traffic !

3. MAYDAY I'm 300 feet from the harbor and I ran out of gas

2. MAYDAY MAYDAY Riley are you listening, our contester net is being jammed by people who were on frequency before us and they just won't move (followed by a loud WAAAAAAAH in most cases)

1. MAYDAY BREAK BREAK Can you tell me the PL for this repeater channel, I think the club's set is off frequency.

Hams are an enigma, Jerry created it

Hams operate in the SS, Nazis operate in the SS

Hams use Heils to speak with, Nazis speak and Heil comes out

Nazis were cold, mechanized and calculated every penny they spent
(nothing's changed, get a DL card lately ?)

Merck received the Third Reich's war chest at the end of World War II,
now they sponsor ham radio expeditions for people who operate in the SS

And so it goes...

I was going to build a portable repeater and never got around to doing it. I have these three Motorola Radios avaialble for sale.

Motoroal Maxtrac50 - 25 Watts - 2 Channel Mobile (D34MJA7304_K)
449.00 MHz - 470.00 MHz but will do the ham bands w/o loss of power or quality.
5 pin connector on rear.

Motorola M120 - 40 Watts - 2 Channel Mobile (M44GMC20A3)
438.00 MHz - 470.00 MHz. 16 pin connector on rear.

Motorola GM300 - 25 Watts - 8 Channel Mobile M34GMC20D3)
438.00 MHz - 470.00 MHz. 16 pin connector on rear.

Best offer + UPS Shipping/Insured takes it!

Sincerely,
Chris KB2BBW

I'd check your receiver if I were you. If you can't hear a legal limit station (when required) you must have a problem. I certainly don't have a problem communicating with anyone one else. So, if you can't hear me i guess I'm blessed.
You really should find something more relaxing and pleasurable to do with your time. Your sounding a little unfullfilled lately. Hell go fishin, huntin or something, you know, deer season opens real soon. It ought to be good this year. Of course you may be one of those animal rights activists also. :-)

316. L.A. to Las Vegas Repeaters

Newsgroup: rec.radio.amateur.misc
Date: 1999-10-06 00:00:00 UTC
From: "David L. Bernstein" <dlbernstein@earthlink.net>
Message-ID: <01bf0fbc$736488e0$dbeeb3d1@david>
Source record: 130127

I will be driving from Los Angeles to Las Vegas and back to Los Angeles in the days to come. My route will be as follows:

Hwy. 14 from Santa Clarita to Palmdale
Pearblossom Hwy from Palmdale to Victorville
I-15 from Victorville to Las Vegas

I've driven this route MANY times before, but this is the first time as a Ham. I've looked through all of the repeater directories and there are a number of 2m, 440 and 220 repeaters along the way.

My question is this: can YOU recommend any repeaters to use which might be good for rag chewing, traffic info, etc?

Thanks and 73 de KF6UMY!

317. I thinks it's time to turn on the filters.

I think by now everyone knows what is the truth and what is BS.
Now, not being one to let a lie go unchalleged or corrected i resond to most of the propaganda from the libnet gang. Again, I believe that "most" of the facts are out there now and that amateurs are aware of what is and what isn't going on. So at the present I see no need to respond anymore to the ridiculous lies and insults from the "So Called" net. With that said, I think I'll start setting up some filters to block some of the perpetrators.
Maybe they'll get the hint and this NG can get back to being about the "brotherhood of Amateur Radio" and not the Brotherhood of the kkk. 73 de Tim.....KK7HO

>to a member of our club who helped in my code
>practice. My question is this ? Some people are
>advising me not to continue that I will be
>grandfathered into the general class license soon
>because of the new laws. Should I take this to
>the bank or could I be holding my hand on my ass
>for awhile waiting or should I continue on with
>my code practice to get the 13

Keep going for the 13. Nothing is definate yet. You may take and
pass the 13 before anything happens. I'm a tech Plus and continueing
my code practicing.

>Any help in reference to this would be appreciated
>When will this go into effect if it does etc
>Also can someone advise as to what methods I should
>use now to get the the 13 wpm if I am going to
>continue Tapes websites etc

Just practice EVERY DAY and GET ON THE AIR and WORK CW.

>You people have been great so far with your advice
>I really enjoy the hobby and look forward to working
>the hf bands
>Thanks loads

Always glad to help.

73,
Tom

Put a bit differently, a carrier modulated at 100% will display twice the carrier power as the carrier without modulation.

try the 880 repeater, it's been awhile but as i remember the pl tone is 100, as are most in Vegas, It makes it into and out of CA . then there's the 940, same tone usually occupied. the 700 on top of the Tropicana Hotel is another good one to try
the 940 and 700 Repeaters will not make it from or to CA but when in Vegas check those.

Codeless ham self check:

Are all your antennas magnetic ?

Are all your antennas safe for children to get poked in the eye with ?

Are you thrilled the more useless UHF bands Keyacom put in their radios
?

Can you remove your antenna "farm", visit a park, and do your part to
keep America beuatiful by picking up loose trash ?

Did you buy a used state police Crown Victoria because all those holes
were a selling point to you ?

Did you buy a IC-706 because you want it for 6 through 432 but are an
"avid swl" and "need it because even though I have my codeless license,
I am working on the 5 words per minute, but just am having so much
trouble gtting it down, but I'm working on it" ?

Do you use Q signals on phone because you have underlying inadequacy
that you don't know a bit of CW and want to act more like a CW operator
than an actual CW operator ?

Oh now we must link Riley's crackdown to POLITICS. What bull! Grow up you wimpering wussies. We all know what's been going on in ham radio. We all know how how "popular" bigotry has become and intentional interference and cursing and everything else that's made American ham radio the laughing stock of the personal communications media. Let's own up to it instead of looking for excuses--instead of finding fault with Riley. No man is perfect. Didn't he prove he was a man by rescinding Jim Dale's and David Castle's suspension? And hopefully on October 25th, the call WB2OTK will be reinstated and Rich will be back on the air. This political tie in to Riley sounds more and more like KV4FZ crappola. "I'm innocent. I'm a great ham operator. The government was out to get me. They had to silence me because of my outspokenness. Too many hinge on my every word and this terrible government is afraid of me blah,blah.blah." You Democrats-stop blaming the Republicans and vice versa for the FCC crackdown now and laxness previously. Remember this:there is nothing as powerful as an idea whose time has come and the FCC crackdown's time has come. Live with it-you really have no choice,do you?

Hi Vathsan,
Below are the rules of the CB radio service. It's a bit long, but at least
you'll know the cold, hard facts as provided by the government.

73, Jeff KH6O

Title 47 - Telecommunication
Chapter I - Federal Communications Commission
Part 95 - Personal Radio Services
Subpart D - Rules for CB Service
Revised as of October 1, 1996

Citizens Band (CB) Radio Service

<RULE 1> Description
<RULE 2> Usage of Rules
<RULE 3> Who is Eligible
<RULE 4> Licenses
<RULE 5>Areas Of Legal Operation
<RULE 6>Special Restrictions
<RULE 7>Operating Channels/Frequencies
<RULE 8>Antenna Height
<RULE 9>Equipment
<RULE 10> Power Output
<RULE 11> Linear Amplifiers
<RULE 12> Permitted Communication
<RULE 13> Illegal Communication
<RULE 14> Paying for Actual Use
<RULE 15> Who Is Held Accountable
<RULE 16> Time Limit of Transmissions
<RULE 17> Identification Methods
<RULE 18> Emergency Usage and Assisting Travelers
<RULE 19> Remote Control Operations
<RULE 20> Telephone Patches and Telephony with CB
<RULE 21> Penalties
<RULE 22> Correspondence from FCC
<RULE 23> Notice of Interference
<RULE 24> Service to Transmitters and Antennas

<RULE 25> Modifications to Transmitters
<RULE 26> FCC Inspections
<RULE 27> Keeping Station Records
<RULE 28> Contacting the FCC

Rule 1 - Description

Citizen's Band Radio Service (CB) is a private, two-way, short-distance voice communications service for personal or business activities. The CB Radio Service may also be used for voicepaging.

Rule 2 - Usage of Rules

You must comply with these rules when you operate a station in the CB Service from:
{1} Within or over the territorial limits of places where radio services are regulated by the FCC.
{2} Aboard any vessel or aircraft registered in the United States or
{3} Aboard any unregistered vessel or aircraft owned or operated by a United States citizen or company.

Your CB must comply with Part 95/Subpart E [Technical Rules].

Where the rules use the word "you", "you" means a person operating a CB station. Where the rules use the word "person" the rules are concerned with an individual, a corporation, a partnership, an association, a joint stock company, a trust, a state, territorial or local government unit, or other legal entity. Where the rules use the term "CB station", that means a radio station transmitting in the CB Radio Service.

Rule 3 - Eligibility To Use CB

You are authorized to operate a CB station unless:
{A} You are a foreign government, a representative of a foreign government, or a federal government agency. or
{B} The FCC has issued a cease and desist order to you, and the order is still in effect.

Rule 4 - Licenses

You do not need an individual license to operate a CB station. You are authorized by this rule to operate your CB station in accordance with the rules stated in this Subpart. <*also read Rule 17>

Rule 5 - Areas of Legal Operation

You are authorized to operate your CB station from:
{A} Within or over any area of the world where radio services are regulated by the FCC.
Those areas are:
[1] The 50 United States
[2] The District Of Columbia
[3] Commonwealth of Puerto Rico

[4] Navassa Island
[5] United States Virgin Islands, it's 50 islets and cays
[6] American Samoa
[7] Baker Island
[8] Commonwealth of Northern Mariana Islands
[9] Guam Island
[10] Howland Island
[11] Jarvis Islad
[12] Johnston Island
[13] Kingman Reef
[14] Midway Islad
[15] Palmyra Island, and it's 50+ islets
[16] Wake Island

{B} Any area of the world, except, within the territorial limits of areas where radio services are regulated by -
[1] An agency of the United States other than the FCC, you are subject to it's rules.
[2] Any foreign government, you are subject to it's rules.

{C} An aircraft or ship, with the permission of the captain, within or over any area of the world where radio services are regulated by the FCC or upon or over international waters. You must operate your CB station according to any applicable treaty to which the United States is a party.

Rule 6 - Special Restrictions

{A} If your CB station is located on premises controlled by the Department of Defense you may be required to comply with additional regulations imposed by the commanding officer of the installation.
{B} If your CB station will be constructed on land of environmental or historical importance (such as a location significant in American history, architecture or culture), you may be required to provide information to comply with Part 1.1305 through 1.1319 of the FCC Rules.

Rule 7 - Operating Channels/Frequencies

Your CB station may transmit only on the following channels/frequencies:

channel frequency(Mhz)
channel frequency(Mhz)
1 26.965
21 27.215
2 26.975
22 27.225
3 26.985
23 27.255
4 27.005
24 27.235

5 27.015
25 27.245
6 27.025
26 27.265
7 27.035
27 27.275
8 27.055
28 27.285
9* 27.065
29 27.295
10 27.075
30 27.305
11 27.085
31 27.315
12 27.105
32 27.325
13 27.115
33 27.335
14 27.125
34 27.345
15 27.135
35 27.355
16 27.155
36 27.365
17 27.165
37 27.375
18 27.175
38 27.385
19 27.185
39 27.395
20 27.205
40 27.405

{B} * Channel 9 may be used ONLY for emergency communications OR for traveler assistance.
{C} You must, at all times and on ALL channels, give priority to emergency communication messages concerning the immediate
safety of life or the immediate protection of property.
{D} You may use ANY channel for emergency communications or for traveler assistance.
{E} You must share each channel with other users.
{F} The FCC will not assign any channel for the private or exclusive use of any particular CB station or group of stations.
{G} The FCC will not assign any channel for the private or exclusive use of CB stations transmitting single sideband or AM.

Rule 8 - Antenna Height

{A} "Antenna" means the radiating system (for transmitting, receiving or both) and the structure holding it up (tower, pole or
mast). It also means everything else attached to the radiating system and

the structure.
{B} If your antenna is mounted on a hand-held portable unit, none of the following limitations apply;
{C} If your antenna is installed at a fixed location (whether receiving, transmitting or both) it must comply with EITHER one of the following:
[1] The highest point must not be more than 20 feet (6.10 meters) higher than the highest point of the building or tree on which it is mounted; or
[2] The highest point must not be more than 60 feet (18.3 meters) above the ground.
{D} If your CB station is located near an airport, and if your antenna structure is more than 20 feet (6.10 meters) high, you may have to obey additional restrictions. The highest point of your antenna must not exceed 39.37 inches (1 meter) above the airport elevation for every 109.36 yards (100 meters, 1 hectometer) of distance from the nearest point of the nearest airport runway.
Differences in ground elevation between your antenna and the airport runway may complicate this formula. If your CB station is near an airport, you may contact the nearest FCC field office for a worksheet to help you figure the maximum allowable height for your antenna. WARNING: Installation and removal of CB station antennas near powerlines is dangerous. For your safety follow the installation directions included with your antenna.

Rule 9 - Equipment

{A} You must use an FCC type accepted CB transmitter at your CB station. You can identify an FCC type accepted transmitter by the 'type acceptance' label placed on it by the manufacturer. You may examine a list of type-accepted equipment at any FCC Field Office or at FCC Headquarters. Use of a transmitter which is not FCC type-accepted voids your authority to operate the station.
{B} You must not make, or have made, any internal modifications to a type-accepted CB transmitter. <*read Rule 25> Any internal modification to a type-accepted CB transmitter cancels the type-acceptance, and use of such a transmitter voids your authority to operate the station.

Rule 10 - Power Output

{A} Your CB station transmitter power output must not exceed the following values under any conditions: AM [Amplitude Modulation] - 4 watts carrier power [CP] SSB [Single Side-Band] - 12 watts peak envelope power [PEP]
{B} If you need more information about the power rule, see Part 95/Subpart E.
{C} Use of a transmitter which has carrier [CP] or peak envelope power [PEP] in excess of that authorized voids your authority to operate the station.

Rule 11 - Linear Amplifiers

{A} You may not attach the following items (power amplifiers) to your type-accepted CB transmitter in any way:
[1] External radio frequency [RF] power amplifiers, also called linear amplifiers, or linears; or
[2] Any other devices which, when used with a radio transmitter as a signal source, are capable of amplifying the signal.
{B} There are no exceptions to this rule and use of a power amplifier voids your authority to operate the station.
{C} The FCC will presume you have used a linear or other external [RF] power amplifier if-
[1] It is in your possession or on your premises; and
[2] There is OTHER EVIDENCE that you have operated your CB station with more power than allowed by CB Rule 10.
{D} Paragraph C above in this section does not apply if you hold a license in another radio service (HAM, etc.) which allows you to operate an external RF power amplifier.

Rule 12 - Permitted Communications

{A} You may use your CB station to transmit two-way plain language communications. Two-way plain language communications are communications without codes or coded messages. Operating signals such as "ten codes" (10-4, etc.) are not considered codes or coded messages. You may transmit two-way plain language communications only to other CB stations, to units of your own CB station, or to authorized government stations on CB frequencies about-
[1] Your personal or business activities, or those of members of your immediate family living in your household;
[2] Emergencies;
[3] Traveler assistance;
[4] Civil Defense activities in connection with official tests or drills conducted by, or actual emergencies announced by, the Civil Defense Agency with authority over the area in which your station is located.
{B} You may use your CB station to transmit a TONE SIGNAL only when the signal is used to make contact, or to continue communications (Examples: tone operated squelch, selective calling circuits). If the signal is an audible tone, it must last no longer than 15 seconds at one time. If the signal is a subaudible tone, it may be transmitted continuously only as long as you are talking.
{C} You may use your CB station to transmit one-way communications (messages not intended for two or more CB stations) only for emergency communications, traveler assistance, brief tests (radio checks) or voice paging.

Rule 13 - Illegal Communications

{A} You must NOT use a CB station-
[1] in connection with activity which is against federal, state or

local law;
[2] to transmit obscene, indecent or profane words, language or
meaning;
[3] to interfere intentionally with the communications of another CB
station;
[4] to transmit one-way communications, EXCEPT for emergency
communications, traveler assistance, brief tests (radio
checks) or voice paging;
[5] to advertise or solicit the sale of any goods or services;
[6] to transmit music, whistling, sound effects or any material to
amuse or entertain;
[7] to transmit any sound effect solely to attract attention;
[8] to transmit the word "MAYDAY" or use any other international
distress signal, EXCEPT when your station is located in
a ship, aircraft or other vehicle which is threatened with GRAVE AND
IMMINENT danger and you are requesting
IMMEDIATE assistance.
[9] to communicate with, or ATTEMPT to communicate with, any CB
station more than 155.3 miles (250 kilometers)
away
[10] to advertise a political candidate or political campaign (You may
use your CB radio for the business or organizational
aspects of a campaign, if you follow all other applicable rules);
[11] to communicate with stations in other countries, except stations
in Canada (on General Radio Service).
[12] to transmit a false or deceptive communication.
{B} You must not use a CB station to transmit communications intended for
live or delayed rebroadcast on radio or television.
You may use your CB station to gather news items or to prepare programs.

Rule 14 - Paying for Actual Use

{A} You may not accept direct or indirect payment for transmitting with a CB
station.
{B} You may use a CB station to help you provide a service, and be paid for
that service, as long as you are paid only for the
service and not for the actual use of the CB station.

Rule 15 - Who Is Held Accountable

You are responsible for all communications which are made BY YOU from a CB
station.

Rule 16 - Time Limit of Transmissions

{A} You must limit your CB communications to the minimum practical time.
{B} If you are communicating with another CB station or stations, you, and
the stations communicating with you, must limit each
of your conversations to no more than five (5) continuous minutes.
{C} At the end of your conversation, you, and the stations communicating
with you, must not transmit again for at least one
minute.

Rule 17 - Identification Methods

{A} You need NOT identify your CB communications...
{B} You are ENCOURAGED to identify your CB communications by any of the following means:
[1] Previously assigned FCC CB call sign
[2] K prefix followed by operators initials and residence zip code
[3] Your name; or
[4] Description of your organization including name and any applicable operator unit number
{C} You are encouraged to use a "handle" (nickname) ONLY IN CONJUNCTION WITH the methods of identification listed above in paragraph B of this section.

Rule 18 - Emergency Usage and Assisting Travelers

{A} You must at all times and on all channels, give priority to emergency communications.
{B} When you are directly participating in emergency communications, you do not have to comply with Rule 16 about length of transmissions. You must obey all other rules.
{C} You may use your CB station for communications necessary to assist a traveler to REACH A DESTINATION or to RECEIVE NECESSARY SERVICES. When you are using your CB station to assist a traveler, you do not have to obey Rule 16 about the length of transmissions. You must obey all other rules.

Rule 19 - Remote Control Operations

{A} You MAY NOT operate a CB station transmitter by RADIO remote control.
{B} You MAY operate a CB transmitter by WIRELINE remote control IF you obtain specific approval in writing from the FCC. To obtain FCC approval you must show why you need to operate your station by wireline remote control. Send your request and justification to: FCC, Gettysburg, PA 17325. If you receive FCC approval, you must keep the approval as part of your station records (read Rule 27 on station records).

Rule 20 - Telephone Patches and Telephony with CB

{A} You MAY connect your CB station transmitter to a telephone if you comply with ALL of the following:
[1] You or someone else must be present at your CB station and MUST-
(i) manually make the connection (the connection cannot be made by remote control);
(ii) supervise the operation of the transmitter during the connection;
(iii) listen to each communication during the connection; and
(iv) stop all communications if there are operations in violation of these rules.
[2] Each communication during the telephone connection must comply with all of these rules.
[3] You must obey any restriction that the telephone company places on

the connection of a CB transmitter to a telephone.
{B} The CB transmitter you connect to a telephone must not be shared with any other CB station.
{C} If you connect your CB transmitter to a telephone, you must use a phone patch device which has been registered with the FCC.

Rule 21 - Penalties ++may not be current penalty information.

{A} If the FCC finds that you have WILLFULLY or REPEATEDLY violated the Communications Act or FCC Rules, you may have to pay as much as $2,000++ for each violation, up to a total of $5,000++.
{B} If the FCC finds that you have violated any section of the Communications Act or FCC Rules, you may be ordered to stop whatever action caused the violation.
{C} If a federal court finds that you have WILLFULLY and KNOWINGLY violated any FCC Rule, you may be fined up to $500++ for each day you committed the violation.
{D} If a federal court finds that you have WILLFULLY and KNOWINGLY violated any provision of the Communications Act, you may be fined up to $10,000++ or may be imprisoned for one year++, or both++.

Rule 22 - Correspondence from FCC

{A} If it appears to the FCC that you have violated the Communications Act or these rules, the FCC may send you a discrepancy notice.
{B} Within the time period stated in the notice, you must answer with:
[1] A complete written statement about the apparent discrepancy;
[2] A complete written statement about any action you have taken to correct the apparent violation and to prevent it from happening again; and
[3] The name of the person operating at the time of the apparent violation.
{C} If the FCC sends you a letter asking you questions about your CB radio station or its operation, you must answer each of the questions with a complete written statement within the time period stated in the letter.
{D} You must not shorten your answer by references to other communications or notices.
{E} You must send your answer to the FCC office which sent you the notice.
{F} You must keep a copy of your answer in your station records.

Rule 23 - Notice of Interference

{A} If the FCC tells you that your CB station is causing interference due to technical reasons, you must follow all instructions in the official FCC notice (This notice may require you to have technical adjustments made to your equipment).
{B} You must comply with any restricted hours of CB station operation which

may be included in the official notice.

Rule 24 - Service to Transmitters and Antennas

{A} You may adjust an antenna to your CB transmitter and you may make radio checks (One-way transmissions for a short
time in order to test the transmitter).
{B} Each internal repair and each internal adjustment to your FCC type-accepted CB transmitter must be made BY or under
the DIRECT SUPERVISION of a person licensed by the FCC as a GENERAL RADIOTELEPHONE OPERATOR.
{C} Except as provided in paragraph D below in this section, each internal repair and each internal adjustment of a CB
transmitter in which signals are transmitted must be made using a NONRADIATING antenna (Dummy Load).
{D} Brief test signals (signals not longer than one minute during any five minute period) using a radiating antenna may be
transmitted in order to:
[1] adjust an antenna to a transmitter;
[2] detect or measure radiation of energy other than the intended signal; or
[3] tune a receiver to your CB transmitter.

Rule 25 - Modifications to Transmitters

{A} You must not make or have any one else make any internal modification to your CB transmitter.
{B} Internal modification does NOT include:
[1] Repair, or servicing of a CB station transmitter; or
[2] Changing plug-in modules which were type-accepted as part of your CB transmitter
{C} You must not operate a CB transmitter which has been modified by anyone in any way, including modification to operate
on unauthorized frequencies or with illegal power.

Rule 26 - FCC Inspections

{A} If an authorized FCC representative requests to inspect your CB station, you must make your CB station and records
available for inspection.
{B} A CB station includes all of the radio equipment you use.

Rule 27 - Keeping Station Records

Your station records include the following documents, as applicable:
[1] A copy of each response to an FCC violation notice or an FCC letter.
[2] Each written permission received from the FCC.

Rule 28 - Contacting the FCC

{A} Write to your nearest FCC Field Office to:
[1] Report an interference complaint; or

[2] want to know if the FCC has type-accepted a particular transmitter for CB service.
{B} Write to the FCC if you have questions about the CB Rules: FCC Private Radio Bureau Personal Radio Branch
Washington, DC 20554

Hi,
I would like to know the uses of a 40 channel CB
Transceiver. And also what exactly this device is. I believe it is a
2-way communication system. Does this also behave as a radio? Just
curious to know if it can be used in emergency (say..if you are trapped
in a car in snow...).
I understand that one can't dump 10 pages of text in here...so,
if I can get a web site which answers my questions...it would be
helpful. But, if you can answer to the point...cool.

Thanks,
Vathsan.

Hi all,

Come on and visit South Africa's elite emergency comms service. HAMNET
Amateur Radio Emergency Communications Org. website. It was also recently
updated and has received some awards already.
It also has access to live data for emergencies and when avaliable live
radio reception during operations.

Please come round and take a look. Just click on.....

I can confirm that. I noticed that while watching the TV documentary
"Cops" several years ago.

I really wish I could understand where this so-called prohibition about
Q signals on phone came from. It is a relatively recent phenomenon, the
last 15 years or so. When I came into ham radio, it was very common and
no one thought anything of it.

I hear arguments that Q signals were "designed" for CW and that their
use on phone is incorrect. Hooey. There was no phone when Q signals were
developed. When phone came along, it was only natural to transfer the
tools of communications from code operations to phone operations.

Terms such as DX, which were "invented" for code operations translate
naturally and effortlessly to phone operations. I hear no whining about
them. And terms such as QSB, QRM, and QRN are still easier, more
efficient, and more accurate to say on phone than their equivalent word
descriptions.

In Europe, altimeter settings are issued to arriving aircraft as QNH. On
phone.

All the nitwits that make the argument proscribing Q signals on phone
had better quit using "73" if they want to make a consistent argument.
It was "designed" for wire telegraph operations and predates radio
altogether.

You might get by with connecting to the cigarette lighter wire. I would not advise trying to plug into the cigarette lighter because these plugs often fail to make good contact.

I connected my HF rig to the 45 amp power seat wire in my truck because it did not have a power seat.

A fifty watt rig will use about 100 watts because they are usually about 50% efficient.

The battery acts like a giant stiffening and filtering capacitor. If you connect to the battery you will have less noise, less voltage variation, and less interaction with other things in the vehicle. Multipage articles have appeared in QST, 73, and CQ magazines discussing installation including the "common ground" problem. If you are an ARRL member, you can download these QST articles at www.arrl.org

It is usually worth the trouble to connect directly to the battery and put the fuse as close to the battery as you can. Some people recommend fuses in both positive and negative leads to avoid fires from the "common ground" problem.

Slip some extra insulation over the wires where they go thru the firewall. Keep the wires away from other wires. The speedometer cable hole may be a better choice then the hole where the vehicle wires pass.

You will love the convenience of having a permanent radio in your vehicle.

As another Jew who has spoken to you on ham radio, I believe your rhetoric tarnises the Jewish faith.

Above all, Jews are for justice. Whatever Herb did, however you feel about it, the most important thing isn't to railroad him out of ham radio. No--paramount is that the "law be faithfully exectuted."

Even though I have a negative outlook on his prospects, Herb is due the same due process that any of us expect from our system. Let's not throw the baby out with the dirty water!

I am not a patriot basher! Secular Soy Beans! I just calls em as I
sees em.
I must however admit that I am more sympathetic to people who are in
the engineering world as opposed to politicians. IMHO technologists of
any level don't get enough respect. It is easy to understand that
politicians can get enough press coverage to make them seem to be hero
patriots and they encourage it and even pay for it in one way or another
because it is their job to personnally get support and votes.
Yep politicians will kiss babies, smoke a peace pipe with Indians, and
whatever it takes. Not that kissing babies is a bad thing or that
showing respect for Native Americans is a bad thing BUT would you
expect a CEO to want that kind of publicity? It is easy to see why a
Ham politician would seek support from Hams.
>
> Goldwater was a patriot and his station was used to
> provide a much appreciated link to home for other patriots
> serving in a shitty place which many of them died in.

I was a GI in Korea when there were no flush toilets. Is that shitty
enough? At the 181st Signal Depot in Youg Dong Po we lived in tents and
used out-houses. The MARS station at Eighth Army, Soul was manned by
soldiers who had no Ham licenses and could not pass much traffic. I was
a MARS member [A2ILP] before entering the service but could not get
myself assigned as a MARS operator. I quit MARS after I left the
military service as a result of my disillusionment with their
performance. Maybe that is why I don't have the proper respect for
the MARS operation...but I admit my feelings may be biased by my own
singular observations, which probably are not typical, and I have, over
the years, realized that RELAYING messages via Ham Radio is and has
always been a patriotic aspect of the hobby.

> Art Collins was a money-influence-suckup who sold

> prices to military units where it fell apart when needed
> most. If he donated gear to Goldwater (which I doubt) it
> was only to gain favor in military procurement circles.

Now, now...What do you know about Arthur Collins? I was a field engineer for several companies before I worked for Collins-Rockwell. While working for other nameless companies, I learned that Art Collins would visit the Air Force and Navy pilots and maintenance people himself, in order to hear their comments about his equipment. He would then order revisions to the designs in order to satisfy the needs of the pilots and technicians themselves. He would not wait for a government contract to be approved but would make changes in a timely way before the cost was even negociated. No other military electronics company worked that way. All required formal reports and negociated for high cost government contracts before making any modifications or specification changes to their equipment.
As far as the reliability of Collins gear. I can say truthfully that every time you fly on any aircraft your life depends on at least some Collins (now Rockwell) avionics equipment. The Collins factory of Cedar Rapids, Iowa has a reputation of high quality workmanship, which no other company that I know of has matched for so many years. The workers and management have excellent work ethics as well as superior technical experience. Collins radio was started in 1933 by Arthur Collins. He understood at that time that airplanes would need radios... and was willing to spend his life devoted to supplying them.
I would also venture to say that if it wasn't for Collins Radio, Single Sideband Transceivers would never have become popular for either Hams or military and avionics HF communication.
True Collins Ham gear was relatively expensive. I never owned any myself. BUT it was not just the Caddilac of Ham gear, it was the model that most others copied from.
Those are the main reasons why I wanted to work for Collins myself.

> It is cowardice to smear someone like Barry Goldwater
> while hiding behind "I'm not sure of my facts". You are
> a small and hateful person, Mr. W2ILP.

Nope, it is cowardice to just go along with the majority, who have been conditioned to recognize Goldwater as a hero...but unfortunately the majority does not have much first hand knowledge of Arthur Collins...and maybe in spite of all his publicity, not much of Goldwater either.
Rather than compare Goldwater with Collins it might be fairer to compare Goldwater with other politicians and Collins to other electronics enterprenuers. Goldwater was, like most politicians, a jelly fish when it comes to admitting to what he truly was. He told people what he thought that they wanted to believe about him.
I didn't hate Goldwater...I never met a Ham I didn't like....BUT I knew he was no Episcopalian. He lost a national election for president ...so I guess not everyone fell for his campaign speech at the Morman

Tabernacle.

> See my prestigious IDJIT list at:
>
> http://homestead.deja.com/user.big_guy_one/BGO.html

OK...I'll look...BUT before you make lists you should consider facts without rushing to judgement. I don't dislike you for your opinion...because I know that all of the facts are not available to most people.
I am aware of some of the good bills that Goldwater passed when he was a senitor, as well as some of the contriversial ones, but all in all I think the world benefitted a lot more for what Collins was able to do in his lifetime.

351. ?Driving copper grounding rod ?

Newsgroup: rec.radio.amateur.misc
Date: 1999-10-07 00:00:00 UTC
From: XmarkehX@dnai.com
Message-ID: <37fcda14.340520458@news3.dnai.com>
Source record: 130149

I need to drive a copper grounding rod into the (very hard) ground
outside my house.

A number of years ago, while an electrician was doing work at my
house, I had him do this for me. He used what I think was called an
"impact hammer" - a relatively large Makita electrical tool that drove
the 6 foot rod like a hot knife through butter.

I can't find (to rent) a tool called an impact hammer. What I can find
is a "rotary hammer" - a drill that both rotates and turns.

Anyone done this before?? Any recommendations?

Will a rotary hammer work??

Use a high-pressure nozzle attached to your garden hose to bore
a hole through the soil. If the rod is hollow, place the nozzle
into the top of the rod -- the soil will be displaced as you
push the rod down.

Simple possession is not quite enough to prosecute:

Rule 11 - Linear Amplifiers

{C} The FCC will presume you have used a linear or other external [RF] power
amplifier if-
[1] It is in your possession or on your premises; and
[2] There is OTHER EVIDENCE that you have operated your CB station with
more power than allowed by CB Rule 10.

I am surprised you can't find an impact hammer. These are fairly common
but they do a pretty good job at driving ground rods. If you know any
electricians or plumbers or contractors, you might check and see if they
would loan you an impact hammer for an hour or two, or they might just
come by, drive the rod and not charge anything just to perhaps win over
a future customer. I can't imagine, even if they did charge, it would
be a great deal of money.

This is most interesting, but have you actally turned
on a cb lately and seen just how many people follow
these rules? How bout 0? That's the way it is
around here anyways.

357. QRZ/ULS question

Newsgroup: rec.radio.amateur.misc
Date: 1999-10-07 00:00:00 UTC
From: "Ira J. Madsen" <imadsen@dialnet.net>
Message-ID: <7tj2itrhr1@ns2.dialnet.net>
Source record: 130155

I'm waiting to get my call-sign from QRZ so I can go on-the-air with 2 meters. I tested September 25th, and I still haven't seen my listing!

I was told it only took 3 or 4 days. Is that correct?

And, why does QRZ sometimes keep the same (daily?) listing for several days? Is it QRZ or the FCC at fault.

Did my VE's forget to mail my paperwork, or is this kind of delay normal?

Tnx.

You can try just using the water from a large drink bottle, just pour on ground, stick rod into water and start pulling and striking the ground up and down, striking the ground with the point, keep putting the water around the rod. if you hit gravel. you will have to use a drilling hammer to finish. Works for me.

359. Re: 100% Modulation...?

Newsgroup: rec.radio.amateur.misc
Date: 1999-10-07 00:00:00 UTC
From: Ian Jackson <ianjackson@g3ohx.demon.co.uk>
Message-ID: <8CP$dJAj7R$3Ewri@g3ohx.demon.co.uk>
Source record: 130157

If we are talking of normal radio AM transmissions, where the RF signal is varied in amplitude by the audio signal (let's keep it simple please... no wise-guys retorting that the 'carrier' is NOT varied... I know this!), at 100% modulation the peak voltage of the RF signal is twice that when there is no modulation. The peak POWER (ie peak envelope power, or 'PEP') is therefore FOUR times that when there is no modulation. Also, the minimum (trough) voltage just hits zero signal level (zero volts, zero power). With 100% modulation, the average power of the complete RF signal increases by 50%.

If we are talking AM TV signals (with normal negative modulation), the peak voltage of the RF signal represents the bottom tip of the sync pulses. The brightness of the picture is conveyed by the downward modulation of the RF signal (black is appx 74% of sync tip, and white is 12.5%, in NTSC). So, maximum brightness (=100%?) is represented by 12.5% of signal level. They don't use zero signal level (at least, not intentionally!).

For other forms of modulation, 100% modulation is what is dictated by the system standard. For FM radio, in the UK it is +/-75kHz, while in the USA it is +/-50kHz (it is, isn't it?.. and we also have a different pre-emphasis frm that the USA!). For the sound signal on TV, in the UK it is +/-50kHz, while in the USA it is +/-25kHz.

For other forms of modulation, the situation is usually similar to FM, ie it depends upon what the system defines as '100%'.

So, you could argue that in AM radio, '100%' modulation is dictated by 'natural forces', while with other forms os modulation, it is dictated by the system definition of '100%'.

Confused?? I am!

73,
Ian.

I think you should find that that rotary impact hammer has a lever which switches it from rotary to just plain impact.... all the ones I've ever used had it. In any case, the rotary movement shouldn't hurt the process of driving the ground rod anyway.

For heaven's sake, don't resort to using a sledge hammer, or even worse, the back of an axe. If you can't find a proper tool, you might try getting a length of 3/4 inch steel pipe, and cap it WELL onto a threaded end. Welding would help. I have driven a few rods with such as this with about 5 pounds of scrap steel welded on to the cap also. Just make sure it can stand the impact without breaking off!

Most state's Motor Vehicle Departments issue an official ID to anyone who doesn't drive, minors included. However, you might contact the VEC involved to see how they handle youngsters who don't have IDs.

No, The VEs can take up to 2 weeks to turnt he paper work in.
The VEC can also take 2 weeks to process.

It normally does not take that long but you MUST understand the VOLUNTEER nature
of the game.

Also, the FCC may add some time.

Take heart, you are in a MUCH better system than when I took my licesnse
exams...
You know...
50 miles, uphill, in the snow, before the FCC examineer, who didn't let you make
corrections etc.
AND you waited 3 or so MONTHS

FCC Amateur Radio Enforcement Log
October 7, 1999

ESTANCIA, NM [UPDATE]: The FCC wrote General licensee Sidney W. Mahan, K5BLB, on September 30, enclosing what it called "a tape recording made of your amateur station transmissions on August 13, 1999, on the frequency 3.950 MHz." FCC Legal Adviser for Enforcement Riley Hollingsworth requested that Mahan "provide a full explanation of these transmissions" by October 20 and signed before a Notary Public. The FCC notified Mahan September 15 that if complaints about his operation continue, the FCC would designate his station license for a revocation hearing and his operator license for suspension for the rest of the license term. Additionally, the FCC sent Mahan a Warning Notice on November 18, 1998, concerning his operation on 3.950 MHz that allegedly involved tapes played on the air as well as sound effects and deliberate interference to other operators. Hollingsworth has told Mahan that his reply "will be used to determine what action to take in this matter."

367. Re: Just passed 5wpm Should I continue ? New Laws

Newsgroup: rec.radio.amateur.misc
Date: 1999-10-07 00:00:00 UTC
From: "William F. Hagen" <whagen@inreach.com>
Message-ID: <37FD6B87.76E5368C@inreach.com>
Source record: 130165

It depends on what you want and what your feelings are on the 'code
issue'

If you want the benefits of 13wpm now, pass the test. If you want to do
13wpm code, just do it, if you want voice access in hf other than 10m,
pass 13wpm now, or stay at 5wpm and wait for the fcc.

For me personally, I am tech plus too, like code, but dont enjoy the
speed of 13wpm. I think 7-10 is much more relaxing and enjoyable to
copy. I also like a little more to a qso than a signal report, radio and
antenna report and a weather report. That gets old real fast.
If I can ever feel comfortable about copying at 13wpm I will pass the
test, but will probably only do so to get voice priveledges on the rest
of the hf bands, but since the fcc is considering giving me those
priveledges anyway I salute them and wait.
It is all about personal choice, whatever yours is, follow it.

The ITU-mandated phone-equivalent of CW's "CQ" is "Hello All Stations."
I've yet to hear an amateur phone operator use that!

Federal law demands that you know the rules prior to transmitting, Andrew:

Title 47 - Telecommunication
Chapter I - Federal Communications Commission
Part 95 - Personal Radio Services
Subpart D - Rules for CB Service
Revised as of October 1, 1996

Rule 13 - Illegal Communications

{A} You must NOT use a CB station-
[9] to communicate with, or ATTEMPT to communicate with, any CB
station more than 155.3 miles (250 kilometers) away

Well, I know the rules. Was just curious what he thought "short distances" were. There was a guy in Panama City who could key up and talk to me any day of the week. Approximately 200 miles!

I want to buy tube straighteners for novars (9-pin) and compactrons (12-pin).
If you're selling, I'm buying (or trading...what do you need?).

Were these EVER MADE? I have plenty of 7/9 pin miniature straighteners, but
I've never seen these anywhere.

Please respond by email.

Hi, All!

I want to attract your attention to my new software - TrueTTY V0.10.

It is program to decode radioteletype (RTTY) via sound card to text.
No additional hardware required - your need only receiver
and computer (5x86-133 or better) with sound card.
Windows 95/98/NT. I plan to implement transmit feature in next
versions.

You can get it from
http://ua9osv.hypermart.net or
http://ua9osv.tsx.org .

In this sites you can find my CW software also.

73!
Sergei,
UA9OSV

Hello,

I am inviting you to come visit http://hfradio.org - a site with many resources for Shortwave Radio and Utility Listeners, Ham Radio Hobbiests, and others who might be interested in this type of content.

So, come on by and check out my non-commercial SWLing/Ham Radio website. The URL is http://hfradio.org and features DX information, including QSL Route/Manager Lookups and Callbook Lookups; a Propagation Center including my eAlert service (allows you to sign up with your email address. Then the eAlert system will send you email propagation reports. I use this with my pager.); Equidistant Azimuth Map software (allows you to create maps of any QTH); Swap and Shop; Bookstore (I've hand-picked over a thousand book titles on radio, etc.); Free website space for YOU to create your own Ham or SWL site, and there's more. Easy to navigate. Open for suggestions.

If you feel up to it, after looking around the site, drop me a note (you'll find my address on the site) and share your thoughts.

73!

Just once, I'd like to tune in to 3.950 and -NOT-
hear Tim Volz, and his slobbering pal, K5BLB.

They meet there nightly, to occupy the frequency
so that nobody they don't approve of can use it.

Then the whining and bitching begin. It gets pretty
nauseating listening to these two and their broadcasting
on 3.950.

Please stop the jamming KK7HO.

yep,

I remember hitting the mailbox every day for at least two months until the ticket came. Then you had to wait until the FCC came to town, or you had to travel to the nearest testing center.

Do you still display your old spark gap transmitter and Quaker Oats cat whisker radio to new visiting hams?

Do you whine and complain about these newfangled Space Cadet kids, No Code and computers?

Do you whine and complain more about these newfangled Space Cadet kids, No Code and computers?

Do your dual pocket to ear hearing aids squeal as you pull them out to adjust the already high gain?

Have you changed the Colostomy bag today between CW contests?

Is your house still wired with silk wire and the occasional oil lamp and a still functional Crosley TV?

Still trying to tune in "Amos & Andy" on that state of the fart Super Regen? ;-)

We're kinda like the Native Americans. The government "gave" (it wasn't their's to give) the Indians some worthless land out west to live on. Then they decided it wasn't so worthless and ran them off. Same thing happens to amateur frequency allotments.

I'm speaking about the ability of governments to renege on promises, not the severity of the actions. The severity of hams losing frequencies isn't to be comared with the abuse the government has given Native Americans over the years.

Ian,

I have never seen, nor used the term 100% modulation in reference to
any mode other than AM. In FM we simply refer to the deviation amount
itself as in: "your deviation is only 3Kcs OM" (in a 5 KHZ system, for
example.)

Great seeing you back on ham radio and hopefully on this board which I control. In fact I was thinking of issuing orders making it mandatory for every poster to have me clear any and all items to be seen by the general public. Word has it that KT4TR has been libeling you steadily which I don't doubt even though I've been rather inactive here for a month. What ID is the nut now using? Does he have as many fake names and IDs as Martin "Bullchittum" has callsigns? The "skinny" on KT4TR is that he uses K2IVX as "point man." You know what I mean don't you? Out of ignorance and desperation, KT4TR puts his foot in his mouth, gets in trouble litigiously and Lennie his shill makes phone calls begging the offended to lay off. I fell for Lenny's b.s. once but no more. Let KT4TR start slinging garbage my way and I'll finish what he started last year. As far as I'm concerned, this Youngblood fellow has to rank just behind his idol,bum Schoenbohm, in offensiveness but tied with that Tennessee ignoramus, George "Polly" Ashley,a.k.a. :Dumbo." Although I really do admire the work Riley Hollingsworth is doing, never will I understand how such a blatant violator of good amateur conduct as Youngblood was never given a "vacation?" Jim, if you decide to take this louse to court, I will me more than happy to assist by giving sworn testimony and providing evidence here or in Florida attesting to his sadism, ruthlessness and provocations. Meanwhile allow me assure you of how much you are liked and respected by DECENT amateur radio operators like I and many like I. You're the greatest!

In FM broadcasting in the United States, the full permitted
deviation (75 kHz) is most commonly referred to as "100 per cent.
modulation," and other levels of modulation and subcarrier injection
levels are almost always expressed in percentages.

Happy aether-perturbing,

Sir, I mocked no one and wonder why you thought I did; I was merely noting an interesting difference in spelling. Are you even sure that you have guessed my nationality correctly? Maybe you should read my posting again and reconsider whatever led you to your conclusion.

I too would never consider permitting medical treatment to any of my family for any serious condition outside of the USA unless it was in an emergency.

In the case where we are talking about a 10 meter amp, you are correct. I was simply commenting on how our legal system tends to prefer laws against possession as opposed to laws against use.

Greetings,

Just aquired a Drake L-4B that is exhibiting the following problems:

A: No output whatsoever in the CW/TUNE position (acts like a dummy load...even absorbs all exciter input).

B: Works OK in the SSB position however red indicator light doesn't come on (flickers lightly when you turn off amp with switch in SSB position.

Any suggestions would be greatly appreciated.

Has any one tried this mod. I was trying to find a more descriptive way to identify the diodes. I have a jpg file of the board if someone has performed this mod I would like to correspond with them and get a verification on the diodes 2&3 locations.

remove the 4 screws attaching the bottom cover and remove the cover. (I had to use a small screwdriver to pry on the cover. It's made to fit tight) with face toward you and belly up look to far right of board and close to you locate a row of SMT diodes 3 on top then a shift to right and a few more. The three are in a PERFECT row top to bottom! count from the top of the row 1 2 3. Remove the # 2 & 3 diodes. Now continue looking down from there and you will see a resistor sticking up in the air (W14). Clip the lead off of the resistor. Reassemble the radio and perform a CPU reset by holding the Set and S.MW buttons while turning the radio on...(page 69 of manual).
You now will have :
118-135 RX (stock)
136-174 TX & RX
320-399 RX (hmmm what's there? I've heard a local radio station DJ at a remote location talking to the station)
400-479 TX & RX
849-950 RX

Yeah Banana Nose, KE4TEW begged Riley to let him get back on amateur radio because his wife is sick. I don't get the connection. But be that as it may, he is on probation one year, and if he goes back to his old qrm ways and rteporting letters are sent in on him that are truthful, the skumbag is outta here again,
You slimeball, Kt4TR is a man, you are a creep.

Hello fellows ... I usually just read through the messages and smile at
all the different views of our service, hobby, endeavor, passion or what
ever one may call it. I however do feel rather strongly about the need
to make fun or light of peoples problems. I am sure that the above
writer does not have a colostomy. I thank God that I don't. I have had
many patients over the years struggle and accept this unfortunate
situation for whatever reason in lieu of death. To make light of this
for humor reflects nothing but ignorance upon the writer. I would
really like to have the writer sit in on a counceling session with a new
colostomy patient .... then I am sure that his idea of what generates
a laugh would change. Sincerely ... Tom Popovic PT KI3R

424. WTT GP 350 UHF for HT or MT 1000 VHF

Newsgroup: rec.radio.amateur.misc
Date: 1999-10-08 00:00:00 UTC
From: Ben <KB9LIQ@email.msn.com>
Message-ID: <OOFi1ldE$GA.316@cpmsnbbsa05>
Source record: 130026

I have a UHF GP 350 with speaker mic and the unit is FM approved
intrinsically safe. Looking for a HT 1000 or MT 1000 in VHF. Please email
with what you have and maybe we can work out a trade.
Sorry I'm only looking to trade or will sell the radio outright if someone
is interested.

Thanks for reading

Ben

I seem to recall (though I may have been in a different context) that two non-photo IDs would work; in which case: school ID card (nonphoto), library card, birth certificate, maybe cub scouts / boy scouts issues membership cards, an envelope of a letter addressed to the kids at their home, etc. Most VE teams would be willing to be reasonable, I should think, especially if accompanied by a parent with photo id.

There's an SSTV net every day on 14.230. Other freqs are:

14.233
14.235
7171
3730
3845
3863
3856
3920
21.340
28.690

Try nearby those freqs as well.

73,
Tom

Riley's letter about (w1wcr and) the net maliciously interfering with qso's on
May 1st
take a LOOK at
http://www.angelfire.com/ga/3950Page2 then check out the links to "Page 1"
and "Page 2" of his reply.

FCC Amateur Radio Enforcement Log

HUDSON, NH [UPDATE]: Extra licensee *Victor A. Misek, W1WCR,* has replied to a
May 7 letter from the FCC that had expressed FCC concerns about the operation
of the **Liberty Net** on 3950 kHz Saturday evenings. FCC attorney Riley
Hollingsworth, K4ZDH, had written Misek to report that monitoring on May 1
indicated that **Misek's station** and **members of the group** for which he
was acting
as net control **"began transmitting on top of existing Amateur
communications**
that were already in progress." In his response, supplied upon request to the
FCC, Misek told the FCC that other stations had yielded the frequency to the
net on May 1 and that he's been "diligent in avoiding starting the net 'on top'
of ongoing communications" and often moves the net to another frequency where
"the jammers stalk us." Misek also has requested a copy of a tape recording
supplied to the FCC that Hollingsworth used in deciding to rescind a license
modification that would have kept David Castle, WA9KJI, off the HF bands for
two years (see "FCC Withdraws License Modification" elsewhere on the AWE news
page). Hollingsworth also had asked Misek to justify the Liberty Net's use of
Amateur Radio frequencies and said the FCC "cannot tolerate deliberate jamming
among licensees, including retaliatory jamming." Misek declined to justify the
net's existence, citing no legal requirement in Part 97 to do so. Misek said
the net was a forum "to discuss current events and other subjects," and he
asked the FCC to "review perceived problems of which I am not aware, so that
the net can be brought into compliance should there be a problem."

Content-Disposition: inline

You know, Al, it's no wonder nobody at the FCC has wanted to do Amateur
enforcement in the last ten years. I have a net here of whiners that want to be
an **International Broadcast Station on 3950**, one of the most congested
areas, and have it all to themselves, all the time, provoke everyone and use
~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~

the frequency for anything in the world **EXCEPT** the basis and purpose of Amateur Radio and its allocated frequencies, and have the **government run interference for them and provide a clear channel** for them, ignoring the fact that frequencies are shared. I get mail from you all every day, and handling the "Liberty Net's (excuse me, "Great Liberty Net") problems would be a full time job. You rail every night about how bad the government is, but run to it every single day complaining, then constantly criticize and second guess everything we do. You remind me of the football cartoon, where the coach, finally tired of armchair advice
and criticism, turn to the spectators and yells "You, in the brown jacket, go in for Number 42". All of you are starting to lose credibility with me.
I have limited time, about 45 calls a day and about 125 e mails every day, and I need to move on to real problems of Amateur Radio being experienced by people who **understand what it is for** in the first place.
Please do not contact me again.

444. Advice needed for a Green Horn....

Newsgroup: rec.radio.amateur.misc
Date: 1999-10-09 00:00:00 UTC
From: Rick Owens <rick.o@prodigy.net>
Message-ID: <37FED10B.820DAF33@prodigy.net>
Source record: 129842

Well I hope I donï¿½t sound to ignorant in this post but I could use some advice and I know my knowledge of ham radio could fit in a tuna can. Before I get to my main question I want to expound on my reasons for asking and my background to eliminate or at the least quell some of the lectures I might get for even asking such a loaded question.

My background:
I am the Chief Engineer of 5Mw full power UHF TV station so my knowledge of the UHF band (at least the TV band) is adequate. However outside this narrow slice my knowledge of propagation falls off fast. I also am fairly well versed in FCC regs but not those of amateur radio. I understand the basics of the licenses and requirements but thatï¿½s about where it ends.

Why do I need advice:
I got bit by a touch of the Y2K bug and it has led me down a path of increased preparedness. (No I donï¿½t think the worldï¿½s coming to a screeching halt or mass chaos will erupt but I do fear the magnitude of what a world wide or nation wide sudden demand for goods could do to our standard supply lines.) In that light and in the name of common preparedness I decided to make a list of things that could be a problem in a major emergency and to do what I could to prepare.

In talking to friends working for Ameritech it became apparent that communications needed to be on that list. I am told their new fiber optic sub stations will fail given a sustained power outage beyond 8 hours. They do have some generators but not enough to handle a widespread outage. Hence a total loss of bi-directional communication. Given this would occur in an emergency situation and my general inherent lack of trust in the government to ï¿½take care of meï¿½, well Iï¿½m not real pleased with the whole idea. This leads me to ham radio as you folks well know.

Well for now my life is busy and I donï¿½t have time for a hobby (I have a 7-year-old ï¿½ thatï¿½s my hobby). None the less if I get into a bad situation I donï¿½t want my only outside communication to be with my neighbor (we donï¿½t really get along that well). If things were really bad Iï¿½d like to have the equipment I need on hand to set up a station capable of reaching some of you folks without the aid of an off premise repeater. I am fully aware of the ramifications of keying up with out a license and all the mess a bunch of yahoos could do under these circumstances. I do not intend on violating the orderly system or procedures you folks have. I have all the respect in the world for the licenses you hold and the knowledge/skill it takes to get them. But in an EMERGENCY ONLY, I would like the ability to ask a question or offer

information not just sit in front of my short-wave receiver as a mute to the world.

Cut to the chase:
With all of this said hereï¿½s my question. What band has the over all best performance compared to cost for the purpose of communicating outside of my community? It would be of interest to talk to cities within my state (150 miles) as well as to others way beyond (skip). In a nutshell what are the advantages and disadvantages of each band? I realize this question may be right in there with who makes the best trucks, Ford or Chevy, but if you would please tell me what you can. I could use some advice on an antenna or anything else a green horn might need to know as well. Once again, I do not intend on setting this rig up and broadcasting away. I would just like to have the equipment I need tucked away with all my batteries, camping gear and toilet paper (priorities ï¿½ gotï¿½a haveï¿½em!). I do have a fairly good source of power for emergencies (12v and 120v).

Thanks in advance for your replies and advice.

Rick O.

Rick, the simple, and legal, answer to your question is to recommend that you get a ham license. The Technician license will allow you to legally operate on all ham radio frequencies above 30 MHz (6 meters, 2 meters, etc). The test is fairly simple - you should be able to pass it with only a few hours of study. And there is no morse code requirement.

A good outside antenna system on the 2-meter band should give you the range you seek, especially if you purchase a radio with SSB capability. If the repeaters stay up during Y2K, then FM might give give you the range. Six meters can give excellent skip communications when conditions are right.

My web site contains information about the license, study tips, the test, and a few words of encouragement. The study material for the test will answer the rest of your questions (propagation, advantages and disadvantages of each band, antenna characteristics, etc.).

Dwight Stewart
Amateur Radio, Technician

Mark,

I've had good luck using copper pipe instead of copper-plated ground rods. I cut the connector from the end of an old piece of garden hose and muscled it over the end of the copper pipe (1/2" pipe available at hardware stores) I secured the hose with a small radiator clamp.

Once the hose was attached to the pipe, I connected the hose to the faucet and started the water at a brisk rate. After a while, I was able to get about 8 feet of pipe into the ground.

If your ground is not TOO hard, this technique might work for you.

Good luck es 73

John

For FM, the terms used to define modulation would be "peak deviation"
and "modulation index."

O.K. I'll cut to the chase ...

You obviously have enough gray matter to learn the simple answers to the Ham
radio exam.
You DON'T have to steal much time from the kid to do this exam.
(My nephew passed his with 3 hours of computer study.)
You will in the process learn the answers to your own questions.
(Or at least have a good idea about the propagation of radio waves.)
What I'm saying is, I don't want to give advise to a potential operator who
will attempt to
operate during an emergency WITHOUT the proper net discipline training and
knowledge of
basic radio operation. The whole purpose of Ham Radio is NOT to supply
personal
communications, but rather, a skilled (trained) pool of radio operators for
times of emergencies.
Immagine the chaos you present if you during "an EMERGENCY ONLY"
"ask a question or offer information" on one of the nets set up for
emergency service.
(What call sign will you use? How likely will the net respond to a pirate?)

So I strongly advise you to get the ticket!

Else, there are unlicensed radio services you can join. (CB, Family Radio)

Actually it can! There was a series of articles back in the late
80's in QST showing construction of a QRP transmitter which could
fit into a large recycled tunafish can. Was featured on the front
cover as I recall.

Target: rec.radio.amateur.misc

FINALLY PHASE 3D HAS BEEN ACCEPTED FOR LAUNCH

Amateur radio operators all over the world have been eagerly awaiting the launch of the Phase 3D satellite. Over the past couple of years, numerous setbacks has kept the project grounded.

Now, AMSAT News Service is reporting that the satellite has been accepted for launch aboard the next "suitable" Ariane 5 rocket. This after AMSAT-Germany and Arianespace reached an agreement, allowing Phase 3D to fly as a secondary payload.

No specific date has been given for the launch, but some are saying that it could come in the first few months of 2000. There are some amateurs, however, who say they will believe it when they see it. Once in orbit, Phase 3D will be the most advanced amateur radio satellite in space.

For more information on AMSAT and the Phase 3D project, visit http://www.amsat.org/. The site also has information on other AMSAT satellites as well. Also, for a complete list of Phase 3D uplink and downlink frequencies, visit http://www.amsat-dl.org/p3dqrg.html.

-- W8MMQ / KC8KFZ

FCC REORGANIZATION COULD MEAN BETTER ENFORCEMENT FOR HAM RADIO

Congressional oversight committees this week approved funding to create two new FCC bureaus -- Enforcement and Public Information, and Legal Adviser for Enforcement Riley Hollingsworth, K4ZDH, says Amateur Radio enforcement could improve under the new regime.

Earlier this year, FCC Chairman William Kennard proposed the creation of the new bureaus as part of his "A New FCC for the 21st Century" initiative. Kennard told an audience at Georgetown University Law Center October 5 that the two new bureaus "will go into operation in the very near future."

Amateur Radio enforcement -- now under Hollingsworth in the Compliance and Information Bureau -- will be consolidated under the new Enforcement Bureau. Heading the Enforcement Bureau will be FCC Deputy General Counsel David Solomon. Hollingsworth will get a new title out of the deal. Once the new bureau is established -- probably by month's end -- he'll become Special Counsel for Amateur Radio Enforcement. Current Compliance and Information Bureau Chief Richard Lee has been tapped to head the new Public Information Bureau.

Hollingsworth reiterated that he anticipates no changes in either the direction or momentum of amateur enforcement under the new Enforcement Bureau regime. "If anything, it will enhance it," he said Wednesday, adding that he hopes to up the percentage of time he's able to devote to amateur enforcement as a result of the reorganization. Hollingsworth's current duties also include Land Mobile Service enforcement.

Hollingsworth also says he hopes to soon hand off management of the FCC National Call Center. In July, Hollingsworth was designated to temporarily take over the Call Center (888-CALL FCC) at the Commission's Gettysburg office while NCC Director Cynthia Jeffries was detailed to other duties involving the Y2K issue.

-- From the ARRL Letter, October 8, 1999

CELL PHONES, PERSONAL ELECTRONIC DEVICES BANNED AT SOME GAS STATIONS

Concerned about the possibility of explosion, some oil companies are banning cellular telephones and other personal electronic devices from use at service stations. Other "personal electronic devices" include CD players, pagers, and CB radios. While not specifically named, amateur radio is probably considered such a device.

The oil companies are concerned that electronic "pulses" from the devices could combine with the gasoline and fumes to create an explosion. In reality, no such explosion has ever been reported. However, supporters of this action say that it is better to be safe than sorry.

Those oil companies that aren't "banning" the use of the devices, are posting warnings against their use in stead. BP Amoco Corporation is an example. Next year, they plan to post warnings at 9,500 service station across the United States.

-- W8MMQ / KC8KFZ

THE WEEKLY DX REPORT

From Burkina Faso, XT2HP will be operational until the 3rd of November on 10 to 160 metres, using both CW and SSB.

From Tunisia, F2KN will be active until the 15th of October operating from 3V8BB. QSL via F6FNU.

From Vitoria Island, PS2V will be operational until the 12th of October on HF, two and six metres, using SSB and CW.

From Niue, DJ7RJ/A35ZL plans to be on the air until the 14th of October. This counts as OC-040 for the RSGB Islands on the Air Awards Programme.

From Ponza, IB0/K8NY will be active on the 16th and 17th of October. This counts as EU-045 for IOTA.

AMATEUR RADIO CONTESTS AND EVENTS

Visit http://www.arrl.org/contests/ for the latest on upcoming amateur radio contests. For information on upcoming hamfests, visit http://www.arrl.org/hamfests.html.

The Illinois QSO Party, sponsored by the Radio Amateur Megacycle Society, will run from 1800-Z October 17 until 0200-Z October 18. Operate Phone and CW. No repeater QSOs. Operate 160, 80, 40, 20, 15, 10, 6, and 2 meters only.

The RSGB 21/28 MHz Contest, CW portion, sponsored by the Radio Society of Great Britain, will run from 0700-Z until 1900-Z Oct 17.

The 17th annual Kalamazoo Hamfest, sponsored by the Kalamazoo Amateur Radio Club and the Southwest Michigan Amateur Radio Team, will be held on October 17 at the Kalamazoo County Fairgrounds. The talk-in frequency is 147.04 (+), with no PL tone. Visit the SMART web site at http://www.qsl.net/ka8blo/hamfest.html for more information.

If you know of an upcoming amateur radio contest or event, submit it to email@w8mmq.com, and we will include it in this section. Let us know at least a week in advance. Thanks!

AND ... IN CLOSING

Thank you for reading this issue of The Amateur Radio Times. This newsletter is distributed each week by W8MMQ and the Radio Society of Central Michigan. We encourage the free distribution of this newsletter to others.

Check out http://w8mmq.com/ for The Amateur Radio Times online! And don't forget that you can visit the W8MMQ web site at http://kc8kfz.com/. If you can't get one site, just try the other!

Information from the following sources was used in the production of this newsletter: the American Radio Relay League, Ham Radio Online, the Radio Society of Great Britain, and other published reports.

> personal communications, but rather, a skilled (trained) pool of radio
> operators for times of emergencies

Here is our entire purpose, as provided by the government:

97.1 Basis and purpose.
The rules and regulations in this Part are designed to provide an amateur radio service having a fundamental purpose as expressed in the following principles:
(a) Recognition and enhancement of the value of the amateur service to the public as a voluntary noncommercial communication service, particularly with respect to providing emergency communications.
(b) Continuation and extension of the amateur's proven ability to contribute to the advancement of the radio art.
(c) Encouragement and improvement of the amateur service through rules which provide for advancing skills in both the communications and technical phases of the art.
(d) Expansion of the existing reservoir within the amateur radio service of trained operators, technicians, and electronics experts.
(e) Continuation and extension of the amateur's unique ability to enhance international goodwill.

I especially like that last paragraph, encouraging us to work DX!
Jeff KH6O

466. Listen to DAVID CASTLE, WA9KJI, inciting and agitating on 3950

Newsgroup: rec.radio.amateur.misc

Source record: 129864

Sounds like the Eunuch from Evansville has embarked on a new tactic for harassing Liberty Net members.

He's currently sitting on 3950, 15 minutes before Net time, babbling endlessly with anti-Liberty Net rhetoric.

Ddeliberate incitement and harassment. But of course, Castle has nothing to fear because he knows from experience that adequate enforcement action will never be taken against him.

Note: this address does not accept unsolicited e-mail. Please contain all discussion regarding USENET posts to the appropriate newsgroup thread.

467. Will K5-BLAB jam the Liberty Net tonight, or will he be a good boy for Riley?

Herman two questions for you.

If CW ops are so wonderful and polite why do they call CQ
on top of RTTY QSOs?

Why are you such a putz?

As your buddy Jim Kelher is fond of saying, correcting spelling
and grammar on the internet is about as low as squid shit.

Abuse your employer's computer doing something with some
relevance instead of defending one of amateur radio's open
sores.

I started listening about 3 minutes before
Net time, so I can't comment about what happened before that. What I heard was
W1WCR announcing that the net would
start on 3952, which sounded unoccupied
at my location. If there was some "Western Public Service" net on 3952, they
must have been running QRP into a paper clip.

Dark Avenger <dark@mindspring.com> wrote:

>If CW ops are so wonderful and polite why do they call CQ
>on top of RTTY QSOs?

Since it's impossible to carry on a CW QSO over an RTTY signal, either the CW station was in the skip zone and didn't hear the RTTY QSO, or the CW station was not zero-beat on that freq'y but rather on an adjacent freq'y using a filter (next time that happens, center your receiver on the RTTY signals and reduce your receiver's bandwidth; it's possible for a CW QSO and RTTY QSO to co-exist in close proximity.)

>Why are you such a putz?

Name-calling usual means a nerve was hit. Coming from an anon is typical.

>As your buddy Jim Kelher is fond of saying, correcting spelling
>and grammar on the internet is about as low as squid shit.

Except when the grammar is so bad that the author's intent was disguised: "You see Tim Sid ..." is nonsense. Lack of clarity in one's writing indicates a lack of clarity in their thinking.

>Abuse your employer's computer doing something with some
>relevance instead of defending one of amateur radio's open
>sores.

News.hawaii.edu contains practically every NG in existence and is made available to every user. Pointing out a gross grammatical error is not "abuse"; instead, take it as a hint that no one was able to understood what you were attempting to say. Rather than getting defensive, why not critically proof-read your comments prior to sending? We're sure you have something informative to say -- don't make us guess what it is.

I don't know if it was, but to propose that amateur radio will offer a useful solution to a lack of phone service caused by a widespread power outage and after the eight hours when these fibre optic relays start to die, is overselling. The family is sitting in a dark cold house and dad is calling CQ DX on a 6m rig running on batteries :-)

I have for sale a Motorola GP 350 It's UHF 16 channels with scan. Radio also has a speaker mic and is intrinsically safe. Looking for best offer or looking to trade for a VHF HT 1000 or MT 1000. Please email me with your offers.

Thanks for reading

Ben

483. Swap/sell Kenwood 78a HT

Newsgroup: rec.radio.amateur.misc
Date: 1999-10-10 00:00:00 UTC
From: "\"Mike Not Mic\"" <w5old@sonetcom.com>
Message-ID: <s01c99ih1s27@corp.supernews.com>
Source record: 129881

Kenwood TH78A (144/440Mhz)Dual-Bander modified for extended transmit and receive frequencies outside the Amateur Band as well as crossband repeater capability. Don't TX outside out of band without approval from big brother......OK?

This radio includes the following accessories:
PB-13 7.2v 700Mah Battery used condition
PB18 7.2v 1100Mah Battery used condition
PB-14 12v 800Mah Battery used condition

W & W Slow Desk Charger

BC-15A Desk/Mobile rapid Charger

Filtered Cigar Lighter Cord Battery Eliminator

Soft Case to protect radio

SMC-33 Remote Control Speaker Mic

HMC-2 Headset with VOX/PTT

BT-8 AA Alkaline Emergency Battery Pack

TH-78A Instruction Manual

The TH-78A offers True full Duplex crossband operations, and the ability to receive two frequencies on the same or different bands simultaneously. The TH78A includes a DTMF keypad and a 6 character Alpha-numeric display allowing the operator to use both group names and actual frequencies. There is a dual band encoder allowing independent operation of VHF and UHF Bands with separate speaker jacks for each Band. This radio has had the paint polished off the heat sink on the rear but, heck that has changed operation and it kinda looks cool. The front of the radio is in good shape and you can read all the lettering fine.
I am a smoker but, I have never caught the radio on fire. Operation of the radio is up to spec. but at this price there is no warrantee. I ain't no store! Price is $300 bucks plus shipping or I need a dual band mobile of equal value. Or if you have one you think is worth more ...I got more trade'n stuff...

Any questions?

Excerpted from "The ARRL Letter"
*****
A major figure in the development of Collins Amateur Radio gear,
Ernie Pappenfus, K6EZ (ex-W0SYF; WB6LOH), of Temecula,
California, died August 14. He was 81.
During his years at Collins in the 1940s, 1950s and 1960s, Pappenfus
directed development of such products as the famous S-Line and the
30L-1.
An ARRL member, Pappenfus co-authored the book Single Sideband
Principles and Circuits, published in 1964, and wrote three articles
for
QST in the 1950s and 1960s.
- --thanks to Bob Sherman, ND6N/Golden Triangle ARC; Electric Radio
*****

I am saddened by the news of Ernie's passing. In the early days of my
career (early 70's) Ernie was my boss and mentor. He was truly a
pioneer in the development of SSB and was a very positive influence
on all who worked for and with him over the years. Always willing to
share his knowledge and insights, he was an "elmer" to many hams
and engineers alike over a career which spanned 4 decades.

I know how to deal with CW signals I don't need your lectures.
The point, in case you still don't get it is that CW ops intentionally

interfere with RTTY QSOs by calling over them. They don't come
close they center on the RTTY then turn on the power. A reasonable
man would have to assume interference is intended. It happened
during the BARTG sprint yesterday just like it usually does. Just to
preclude your next specious argument the RTTY ops were well
within the parts of the bands usually reserved for digital modes.

I only bring this up because your veneration of CW ops as Saints
is both inaccurate and tiresome.

Give me a break only a moron couldn't understand what was meant.
I find it most interesting that you don't choose to address the meat

of the message, could it be that you have been suckered by Tim Volz's propaganda campaign. The subject of the original thread K5BLB is one of the most vocal bigot I have ever heard on the air. Up until recently he used the term "Jew" as an insult almost as often as he uses the term "faggot" ; so if this is attack on me and my post is ethnically motivated you might want to look into the subject a bit more. I would expect an academician to have done his home work but since you are a failure at that I will cut you some slack.

>error is not "abuse";

As a tax payer both in the US and the State of Hawaii I consider it abuse. If you are going to continue to be an internet cop and general jack ass why don't you get your own account rather than bringing the University into it. It only costs $20 a month or less. That way you could be as much of an ass as you wish and not besmirch the University.

Oh yes I am on the main land right now those darn old headers tell you that but I'll be back real soon.

>instead, take it as a hint that no one
>was able to understood what you were attempting to say.

You seem to be the only one who couldn't understand that says a whole lot more about you my friend.

>prior to sending? We're sure you have something informative to
>say -- don't make us guess what it is.

What is this "we" stuff taking on even more airs than usual? What a pompous control freak you are Herman, I really feel for your students. If you have to guess what I was trying to say due to a missing comma there is little chance you would get it with or without the subject comma.

Plonk you just fell into the bit bucket

Anthony R. Gold <tgold@panix.com> wrote:

>I've heard a load of pileups and I never noticed much goodwill.

Now you've done it, Tony. Here comes the "pile-up" file:

What sounds to you like a dozen-dozen stations QRMing each other is really an established method of communication. "Pile ups" are understandable only to those who participate in them frequently. On the maritime bands we had a world-wide pile up every six hours - hundreds of ship-board operators at sea, wanting to pass time-sensitive weather observations (WX OBS), camped out on the calling frequencies, all calling their favorite shore station simultaneously. The shore operator picked out the stronger ships and passed out numbers ("3JKG UR NR 1, KNLF UR NR 2, JYLS UR NR 3,...") until he had about 20 or 30 ships lined up; then he QSYed to their respective working frequencies and took their OBS. After finishing with that group, he'd turn on the CQ tape and the calling frequencies would come alive again, and he'd line up another group of ships. Twenty minutes into that OBS hour the calling frequencies would be calm again until the next OBS period, six hours later, approached. This went on four times per day, every day, for over three-quarters of a century. (Only by getting WX OBS from every ship at sea was the WMO able to provide accurate WX forecasts for those ships - that was incentive enough for each ship at sea to take and pass their OBS.) This is no different than what happens on the ham bands - the DX station will pick out one station at a time from the pile up then go on to the next station. As with many of our other procedures, hams copied this technique from the maritime folks.

Whether one's on the marine bands or the ham bands, it's a real thrill to be on the receiving end of a pile-up!

Good idea, but really GO for it. Calculate the current, and stick a goodly resistor in series. Drop the vovtage to ~ 75% of the rated voltage. It'll last for ever!

Ian.

Agreed that ham activity on the cw portion of 10 will help.

One additional solution would be to attack the problem at its roots.

Email Riley or Kenard (@fcc.gov) urging them to take action to better regulate the sale of illegal "export radios".

These "exports" cover the 10 and 11 meter band and are clearly targeted to truckers and CBers and are widely available at truck stops and retailers via the internet (exportsrus.com).

500. FCC to crack down on illegal 10 metre amps.

FCC to step up 10 meter enforcement

The FCC's Legal Adviser for Enforcement Riley Hollingsworth says hams can expect more rigorous enforcement on 10 meter issues next year. Hollingsworth told visitors to the Shelby Hamfest in North Carolina that the next area of enforcement would be the encroachment of unlicensed individuals into the 10 meter band and a crackdown on illegal RF amplifiers. His announcement drew loud applause from the Shelby crowd. Hollingsworth elaborated on the comments in a recent interview ARRL Audio News concerning this and other enforcement issues.

"There are really two areas we need to really crank up on next year. One is the incursion into 10 meters by unlicensed operators, CBers and so forth. And also the sales of illegal equipment on the Internet and at hamfests and so forth. We really need to crank up enforcement in those two areas."

Hollingsworth told the crowd that he'd spotted more illegal equipment at Shelby that he'd seen last May at the Dayton Hamvention. You may remember that at the Hamvention, FCC Field Office personnel from Detroit warned several vendors about potential violations relating to the advertising or merchandising of RF amplifiers capable of 11 meter CB radio operation.

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, K1XN & The GoList, N2VW, NT2X, WB2RAJ/WB2YQH & The 59(9) DXReport, AJ3M, K3TEJ, WB3JFS, K4AVQ, W5FKX, NI6T, K8YSE, K9RZ, 9A3ZG, CE6TBN & Bolrtin de DX, CX3AL, DJ5AV & DX News Letter, F6AJA & Les Nouvelles DX, G3NOM, HA0HW, HP1AC, ON4VT, PS7AB, PS7KM, RA3AUU, UT7ND, UX0FF, VE2EH, YO3JGC and ZL4OI for the following DX information.

3F, PANAMA. Cam, HP1AC, reports that he and others in Panama will be using the special 3F prefix between Decmeber 1st and January 5, 2000, to commemorate the turnover of the Panama Canal over to the Repubic of Panama. Cam states to look for him as 3F1AC on 40-10 meters CW only and to QSL his operation via HP1AC.

4U1, ITU HQ. Masa, AJ3M, informs OPDX that after his business trip in Moscow he will be in Geneva from October 19-21st. He will be on the air from 4U1ITU during his visit. QSL via Bureau or CBA to 4U1ITU.

4X, ISRAEL. Enia, YO3JGC, informs OPDX that she is currently active as 4X/YO3JGC. QSNs reports show that she was active this past week on 10 meters (28436 kHz around 1515z). However, Enia wants everyone to know that her QSL info is not always correct in a few callbooks. QSL 4X/YO3JGC via Eugenia Radu, P.O.Box 18-56, Bucharest 71500, Romania.

9A, CROATIAN ISLANDS (IOTA AND IOCA Activity). Frane/9A5V, Matko/9A3VM and Fredi/9A5KV, who were active this past weekend from the island of Lokrum (CI-056, JN92BP), will try to activate the island of Mrkan. This will only be a one day DXpedition. According to Frane, this DXpedition to Mrkan Island (CI-072, JN92CN) will be the most adventurous one. Operations will take place October 16th or 17th. Later this year, the group could activate the island of Jakljan (CI-033, JN82VR) which is also located in the same region. All islands mentioned here are also valid for IOTA EU-016. QSLs go to home callsigns. For those interested in the basic IOCA award, island chasers must contact 10 different

Croatian islands. The fee for "The Islands of Croatia Directory" is 10 USD which covers the cost for the basic IOCA award. For more details and a list of all Croatian islands, go to the Web page at: htttp://www.qsl.net/9a6aa

9H, MALTA. Deryck, G3VLX, will be active as 9H3AM once again from October 21st until the early part of November. He will use a FT-757 with a vertical and dipole antennas.

ANTARCTICA. Jeff, WB3JFS, reports the following to OPDX: As the Austral Summer approaches the southern hemisphere many of the Antarctic bases are coming out of "hibernation" by preparing for another season of new crews and visiting scientists and explorers. Along with these groups are a few hams who like to operate from "the ice". Some operate from remote camps or huts with dipoles or verticals while others operate from major bases with yagis or log periodics. It is never known how many or which bases will be active, so you never know what you will hear next. There is a great website that contains a vast amount of information about Amateur radio on "the ice". Everything from old and new QSL cards, up to date QSL information, and a map of the continent. The address is:
http://www.avana.net/~polar
It is maintained by Bob, K4MZU, and it's worth checking out if you're interested in working the bases on this remote land.

CE0Z, JUAN FERNANDEZ ISLAND. Operators CE6JOE, XQ3SAI, HC5EA, LU9AY and CE6TBN will be active from IOTA SA-05 between Janury 6-16th in the year 2000. No callsign has been announced yet. The group plans to be active on all bands 80-6 meters plus the WARC bands, on SSB, CW, RTTY, SSTV and Satelite with 5 Stations. The team is looking for another operator, if interested contact Marco, CE6TBN at: ce6tbn@qsl.net
Any donation for this operation is welcome and QSLs can be sent to: Marco A. Quijada, CE6TBN, Box 1234, Temuco, Chile. For more details, check the Web page: http://www.qsl.net/ce6tbn

CO9, CUBA (Correction). Activity by the CO9BCC group from Boca Ciega beach during the CQWW SSB Contest (October 30-31st) should be QSLed to VE2EH not VE3EH. Please refer to OPDX.429 for more details.

EA8, CANARY ISLANDS. Steve, G0UIH will be active as EA8/G0UIH/P from October 21-28th. His operations will be SSB only on 20-10 meters. QSL via his home callsign.

ER0, MOLDOVA. Gene, UT7ND, will be active in the CQWW CONTESTS from the village of Otaci, Moldova, as ER0N. All QSLs via the Ukrainian QSL Bureau or direct to UT7ND, Gene Chumakov, P.O. Box 5235, Vinnitsa, 286018, Ukraine.

FK, NEW CALEDONIA. Danny, FK/F5CW, has received his FK callsign and is now signing FK8VHY. He was spotted this past weekend on 17 and 15 meters CW after 0300z.

FO, FRENCH POLYNESIA. "The 59(9) DXReport" reports that Yann, F1NGP, will be here October 29th through November 13th. His modes/bands of operations

were not mentioned. Also, Yann will receive his callsign upon his arrival.

FY, FRENCH GUYANA. You have a few more days to work Baldur, DJ6SI, as FY/DJ6SI. He will leave October 15th. Over the past weekend he was heard on 12 and 160 meters CW. QSL via DJ6SI. Also, look for Joel, F5PAC, to be active as FY/F5PAC from November 1-14th.

HB0, LIECHTENSTEIN. A Hungarian group will be here this year again from October 30th through November 7th, to participate in two upcoming contests. The HA-QRP Contest, sponsored by "Radiotechnika" (the journal of "electronika"), will take place 0000z, November 1st through 2400z November 7th. The team members of Laci/HA0HW, Tomi/HA4DX, and Geza/HA4XG will be active on 3511 kHz (-/+ QRM) 24 hours a day with the callsign of HB0/HA5RT/p as QRP station. Their QTH will be at Triesenberg at 1400 meters ASL. However, the operators will use HB0/homecall/p on other bands, mainly on CW and RTTY with two different stations with 100 watts, GPs and dipoles. They will participate in the CQWW SSB Contest to give out new multipliers for those stations who need it. Suggested frequencies are:
CW - 1831, 7011, 10104, 14011, 14026, 18071, 21011, 21026, 24891, 28011, 28026 kHz
RTTY - 7040, 14086, 21086, 28086,
QSL cards for confirmation with HB0/HA5RT/p QSOs should go to HA0HW, and the others should go via their home calls.

IARV IN TAIWAN. International Amateur Radio Volunteer (IARV) team leader Yoshi, JA1UT, has just returned from Taiwan, where IARV donated 35 VHF handheld transceivers to the CTARL President BV5AG for use in the Earthquake Disaster relief. He also assisted with rescue communications.

IOTA NEWS......
AS-NEW. An excerpt from a press release by Ray, HS0/G3NOM, states that the Radio Amateur Society of Thailand (RAST) announces a special DXpedition to a new Thailand IOTA Island Group and participation in the RSGB IOTA Millenium Competition to celebrate the Year 2000. The "first-time" operation is planned for the Malay Peninsula South East Group (including Kra Maeo, Nu etc) for March 2000. Contacts qualify for "premium" (bonus) points in the RSGB IOTA Millenium Competition. The islands are uninhabited and located off the coast of the Southern Thai Provinces of Sonkhla and Nakhon Si Thammarat, in the South China Sea. They are about 1000 km South of Bangkok, and close to the Northern Malaysia border. More details will be annouced at a later date. SPECIAL NOTE: OPDX InterNet Subscribers will receive the complete press release as an additional bulletin.

OC-033. Philippe, FK8VHT, will be FK8VHT/P from Lifou Island from October 14-21st.

OC-114. Marcel, ON4QM, active as FO0DEH from Raivavae Island at the moment, will stay there until October 18th or 19th. From here he will go on to Tuamotu (OC-066).

SA-020. Joel, F5PAC (as FY/F5PAC), will go with FY5FU and activate Salut Island, while in French Guyana, from November 5-7th.

KH5, PALMYRA AND/OR JARVIS ISLAND. By the time you read this, Norbert, DF6FK, and his XYL Judith, DL2ZAD, should be active from here now through October 21st as KH5/homecall. Activity will be on 80-10 meters SSB only. QSL via DF6FK direct or via the bureau.

LIGHTHOUSE ALERT. A new one will be activated for the "Brazilian Light-houses Award" (DFB). Look for St. Alberto Lighthouse (DFB RN-03) to be activated by PX7ZZ on October 23-24th. Activity will be SSB/CW on 80-10 meters. QSL via PS7ZZ, F.E P. Freitas - Av. Sao Miguel dos Caribes 31, 59086-500, Natal/RN, Brasil or via the PS7 bureau.

NOIDXC GOES QRT. From a press release by Don, W5FKX: "After several weeks of review and soul-searching, the Board of Directors of the New Orleans International DX Convention voted to dissolve the convention. Faced with a financial deficit and a flat attendance for the last several years, a majority of the Board were no longer willing or able to justify the extensive amount of work and effort that was required to maintain a quality program. It was with great sadness that this final step was taken. The Board extends its sincere thanks to all of our friends and supporters, as well as to all those who have attended over the last 8 years."

OD, LEBANON. The LNDX reports that Genevieve, F5SQM, has received a licence and is active as OD/F5SQM. She is active mostly on CW and will participate in all major contest. QSL via her husband F6FYA.

P4, ARUBA. Alan, K4AVQ (ex-W0RIC, V2-W0RIC), will be active as P40AV from December 18th through January 1st (2000) at P49V's QTH. Activity will be on all bands 160-10 meters. QSL to his home callsign K4AVQ. More inform-ation later.

PY0S, ST. PETER & ST. PAUL ARCHIPELAGO. The Natal DX Group announced this past week that the Brazilian Navy has scheduled a new departure date for St. Peter & St. Paul Archipelago. The group states that they will depart from Natal November 3rd. After a three day trip, the group will be there and the start of the operation will happen as soon as they set up the stations. The distance between Natal and the rocks is around 1100 KM. They plan to be on the air 24 hours a day, on 80-6 meters. On SSB, CW, RTTY and SSTV. They will try to set up a longwire for 160 meters band. Their callsign will be:
ZX0SK - For SSB/RTTY/SSTV. QSL via PS7KM, via callbook.
ZW0SP - For CW. QSL via PT7AA, via callbook.
Please note, cards with insufficient postage will be returned via bureau. The group states that the "Brazilian bureau is working very bad and slowly".

QSL INFO AND NEWS.....
3B9R QSL STATUS. Garry, NI6T (3B9R member), reported that Frank, AH0W/W7, has informed him that about 2/3 of the many thousands of 3B9R QSL requests have been answered, and the rest are being worked on.

Frank notes that a great many second requests are coming in from DXers who seem to think their cards may have been lost. These additional cards slow the process, and, of course cause, additional expense to the senders. Again, patience is called for here. Your cards are coming.

Excerpts from a press release by Ed Kritsky, NT2X, he states that he will collect QSLs for Mike, RW1AI, operating at R1AND and forward them to him sometime before May 2000, when he returns home from Antarctica. No cards will be issued prior to his return. Technically speaking, Ed is not a manager, but a "mail collection point". Mike has a serious mail pilfering problem in Russia. Ed will not have logs or cards, and will not issue confirmations. This will be done by Mike himself, when he returns. All replies will be mailed out of Russia. Mike has always done his own QSLing, and his wishes must be respected. Ed STRONGLY recommend sending cards DIRECT to this address: Mike Fokin, R1AND, c/o Edward Kritsky, P.O.Box 715, Brooklyn, NY 11230, USA. Please enclose SAE with either an IRC or USD (please, no SASEs with US postage). Airmail letters out of Russia cost approximately 0.75-0.80 USD. Ed also request not to QSL him and Mike via the bureau. OPDX InterNet Subscribers will receive the complete press release as an additional bulletin.

Leo, CX3AL, informs OPDX that the mailing cost of one letter from Uruguay is around 1.50 USD. A lot of stations have been sending SASE to him with only 1.00 USD. Leo states that over the last two years he has been paying the difference out of his pocket for return direct QSLs. However, Leo has received many QSL cards, mainly because of his activity on the WARC bands, and he cannot support it any more. He requests OPDX to "Please inform the DX comunnity that in the future direct requests that not cover full postage charges will be answered through the buro."

S21, BANGLADESH. It has been reported that Yoshi/JA1UT, Shigeharu/JA1AFF and Tada/JS1QHO will visit Bangladesh and plan to operate as S21ZE (this callsign was reissued, used back in 1994). They will be assisted by Rashid, S21AR. They plan to be active from October 14-18th. Activity will be mainly CW on the WARC bands, 29Mhz FM, and 6 meters. QSL via JA1UT.

SPECIAL EVENT (Another EO55 station). Nikolay, UX0FF, reports that he is the team leader of EO55FI special event station to commemorate the 55th anniversary of the "Liberation of Ukraine" in WW2. They will be active on all bands/modes October 25-29th. QSL via UX3FW, Yuri Kucherenko, P.O. Box 60, Izmail, 68600, Ukraine. PLEASE NOTE: Nikolay reports that they are having some problems with the S.A.S.E. from USA with stations sending Ukrainian Post stamps. Stamps being sent have a price of only 1.20 Ukr. Grivna. Ukrainian postage now is about 3.00 grivna....

SPECIAL EVENT. Members of the Otago Branch of the "New Zealand Association of Transmitters" (NZART) have been granted the special event callsign of ZM75AA for the month of October. The special callsign will be used in celebration of the 75th anniversary of the first trans-world 2-way radio contact. The contact took place on October 18, 1924, between Frank Bell,

Z4AA, of Shag Valley Station at Waihemo, near Dunedin, and Cecil Goyder, G2SZ, at the Mill Hill School in London. The Otago Branch members will be active mostly on the WARC bands now through October 31st. QSL either via the Bureau or direct with SASE to ZM75AA at: PO Box 5485, Dunedin, New Zealand (overseas stations enclose 2 IRC and self-addressed envelope for return card.)

SPECIAL EVENT. Look for VC7A to be activated by the Cowichan Head Contest Club in both the CW and SSB "CQWW Contests" to commemorate the 50th Anniversary of the founding of NATO.

TM5, FRANCE. The "LNDX" reports Dominique, F5SJB, will use the special callsign TM5CW from November 22nd through December 6th. He will also participate ino the CQWW CW Contest.

V26, ANTIQUA. Look for Bud, AA3B, to be active as V26K from here November 22-29th. Also, look for John, K3TEJ, to join Bud (after his Montserrat operation, see VP2 below) from November 25-30th as V26KW. Both will be active on 160-10 meters including the WARC bands. They will be in the CQWW CW Contest using the V26K callsign as a Multi/Multi entry. QSL V26KW via K3TEJ and QSL V26K via AA3B.

V31, BELIZE. Hugh/K0GHK and Roger/WA0ETE will be active from Ambergis Caye (NA-073) October 10-16th using the callsign V31KQ. Operations will probably be in the mornings and evenings, as they are planning on playing (other than hamming) during the day. Look for them on both SSB and CW, especially 10 and 15 meters. QSL via WA0ETE.

VP2, MONTSERRAT. John, K3TEJ, will be active as VP2MHJ from November 22-25th. This operation will be CW only on 160-10 meters. QSL via K3TEJ.

VP5, TURKS & CAICOS ISLANDS (Update). Jack, N2VW, reports that the team of Frank/WA2VYA, Ken/K2WB and himself are on track with plans to operate from the Providenciales Island (NA-002) from October 26th through November 2nd. The team will participate during the 1999 CQ WW DX SSB Contest (October 30-31st) as VP5T and as a Multi/Multi entry. They are members of the Frankford Radio Club. Emphasis will be on CW and the WARC bands before and after contest. QSL to N2VW with SASE/SAE+return postage, or bureau via N2VW. QSL VP5/ portable calls to home call CBA.

VP8, SOUTH SHETLAND ISLAND. Oleg, R1ANF/A, has been active this past week on 20 meters CW after 0100z from the Korean Antarctic Research base King Sejong HL-001. Two weeks ago he was operating from the Chinese Antarctic Research base, Great Wall. QSL via RK1PWA.

The info is a bit late for being "newsworthy", and you make it to read
as if amps are forbidden on 10,....not true.

> They were closer to Dave. Now you have it straight.

HA!

In QSO. That's a laugh. The psychotic David Castle, (WA9KJI) was doing his "ghost talking" again last night. This is his broadcasting tactic of pretending to talk to another ham, who you can't hear because of 'atmospheric conditions'. At least that's how KK7HO explains it. Their aim is to prevent the Liberty Net from starting on 3.950, as it has for the past 14 years. This ambush tactic of theirs is getting pretty old.

KK7HO, K5BLB, W9ART, and Wa9KJI are just jammers - plain and simple.
Nothing but criminal amateur radio operators. If you have any doubt, just check their ring leader's work recorded at the URLs listed below.

Please stop the jamming KK7HO.

KK7HO quoted:

> >He's currently sitting on 3950, 15 minutes before Net time, babbling
> >endlessly
> >with anti-Liberty Net rhetoric.

This is the old tactic of setting up on the frequency before the Net starts and refusing to move to another frequency a few minutes later when the scheduled net start time arrives. Volz and his understudies have been using this tactic for about a year now. Then they act like they are the vicitms of the Net that they just ambushed.

Get a life Tim and stop your jamming.

When cornered, and lies don't work, Tim reverts to the schoolyard
tactic of name calling. Sheese, what a life KK7HO (Tim Volz) has.

But the worst was when he blamed his daughter for his mass emailing
of a pornographic letter to the Liberty Net members, that he was
harassing. Did your daughter ever get any treatment for her condition,
Tim?

Tim Volz is in tough shape. His daily number of posts to
this newsgroup is a small fraction of what it used to be.
His lying propaganda is just a shadow of its former volume.

True signs of Tim's frustrated dilemma.

Volz is about to loose his best buddy on HF. K5BLB, Tim's
HF Boyfriend is about to loose his amateur radio license for
years of malicious interference on 3.950, while attacking the
Liberty Net. Most of this action is at the urging of Tim Volz,
KK7HO.

What's Volz to do now? Who will listen to his crap on HF?

Tim's in heavy denial about this situation, and even worse,
K5ZU is dead. and can't help Tim anymore either.

Tim, take up another hobby, maybe read a book. May I
suggest one by Robert Bork, Slouching Towards Gomorrah.
It help you get your mind right, Tim.

Hear KK7HO discussing a contract Killing at:
http://members.xoom.com/frg9600/500.wav

Hear Volz jamming the Liberty Net (6 minutes):

Hi Folks,

To save me downloading every crappy demo of every Morse Code training app,
Does anyone know of a good FREE one? I kinda liked "Stormy Weathers" app,
but it costs money - and I stopped paying for DOS apps years ago. I could see
if it was modern and written for Windows - but its not.

Best Reqards,

Scott.

I am neither defending Herb nor condoning his conduct.

What I am respectfully assailing, Doc, is your mode and manner of expression: Replete with character assasination, innuendo, calumny and invective, My contention is that Jews who live their religion lean impeccably toward justice.

Yes, Herb has surely been able to exercise the the layers of due process in our system.

Yet one incontrovertable fact remains: he was convicted of two counts by the jury on the basis of fabricated evidence. I know because I was there, taking custody afterward of a printout of the alleged illegal calls. When I interviewed two recipients listed in Miami, neither knew Herb nor had communicated with him. And both had so informed the FBI during the investigation stage. Yet the printout was fraudulently used nontheless.

Although that affected Herb's due processl, it doesn't per se exonerate him of the count on which he still stands convicted nor return his ham license. To remedy the prosecutorial misconduct, the incensed trial judge did take the unusual move of reversing the jury on two counts.

Being on the sidelines for several years, also being someone who has indeed had negative, commercial experience with Herb, I still contend that the moment bias blinds us from instant facts is the moment we ourselves stand doomed.

This principle is enshrined on the outside of the Supreme Court in Washington: "Equal Justice Under the Law!"

Being anti-Jew does not compare with being a racist. A person can change religions on a whim if they like, but a person cannot change their race. That's right,
Jew is not an ethnic group! It is a religious affiliation like Christians or Muslims. I could convert and become a Jew but that would not make me a Semite. A Semite is anyone with a genetic tie to the region we mainly call the Holyland and includes some Arabs as well. However, most people, including many Jews seem to make this mistake.

If someone starts telling me how the Christians are running the world and how the should be shot, I don't start screaming that my rights have been violated. Granted it is a terrible thing that so many people have been persecuted just because of their affiliation with a religion, but to say Jews are no good does not make you anti-Semitic! Chritians were fed to the lions, and there are still clashes between Catholics and Protestants in Ireland. Yet if someone starts spewing forth anti-Christian crap, You don't see a bunch of Christians getting their panties in a wad about it. (unless they 're Jerry Farwell)

If you are going to use the terms Jew and Semite, please try to use them in context.

: as if amps are forbidden on 10,....not true.
:
: Butch Magee, KF5DE

This was from last weeks NewsLine, so it is recent.

And it is illegal to manufacture a 10 metre amp. Hams may
modify an existing amp for personal usage however. But
no manufacturer will be able to get one type accepted. Ham
transceivers are allowed to be type accepted in the 10 metre
band for higher power.

516. Hams Prepare for Y2K Article

Newsgroup: rec.radio.amateur.misc
Date: 1999-10-11 00:00:00 UTC
From: Dwight Stewart <stewart@amouse.net>
Message-ID: <3801F419.B6264781@amouse.net>
Source record: 129783

I'm writing a newspaper article describing how Amateur Radio Operators might assist following any problems which may occur as a result of the Y2K computer bug. I'm hoping the members of this newsgroup will provide input for the article.

Specifically, I'm interested in what preparations your local ham radio club is making, any contact you (or your club) may have had with other organizations concerning this, or any other related information that you might provide that the public should know. Quotes from you, or other individuals, would also give the article more punch (if you're willing to be quoted).

This is a public service article, designed primarily to promote Amateur Radio. I will not charge for the article and I will make it available to any newspaper that might be interested in publishing it or any Ham Radio operator who wishes to send it to his/her local newspaper.

The article is not designed to scare people with the Y2K bug. If anything, it is designed to comfort people's fears by assuring them that action is being taken in the unlikely event that anything does happen as a result of Y2K.

I got the idea for this article after talking to the editor of a local paper in Seattle. He said that it might be interesting reading. He suggested that I write it up, submit it, and see if it has enough substance to get published.

I decided if a local paper could be interested in this type of article, perhaps other papers might be interested also. In addition, I figure a timely article like this may be a good way to promote ham radio.

When responding in this newsgroup, please make sure a copy is also sent to my email address.

Thanks for your assistance.

Because we Hams are charged by the FCC to do self policing.
We even have our own investigators called Official Observers (OO).

: > By doing this you may be taking food out of their kids mouth, man that
: > doesn't sound too safe. maybe he would like to know who did this. man
>why
: dont you guys let the authorities do their jobs by themselves
:
: True, CB amps can't be compared to drugs, murder, or even DWI.
: There are a lot more critical problems in the world, and CB is
: very low on the priority list of any enforcement agency (as
: it probably should be).

CB is now a high priority to the FCC. It is called "fixing the
broken window" type of enforcement. The theory is that if
you let a window stay broken then it will lead to other types
of crime as people see that no one cares. The mayor of
NYC uses this tactic. He goes after small street crimes
like jumping the turnstyle in the subways.

Stop the small crimes and you will no breed bigger criminals.

: But it's SAD to see a "looters mentality" prevail in what was once
: a GREAT hobby. (i.e., during the LA riots, people who looted the
: abandoned stores did no one any "objective harm". The stores
: were insured...the cops looked the other way..."everybody"
: was looting....chances of getting busted were slim, etc.)
:
: What's wrong with breaking laws -- especially when it "harms
: no one"? I can only speak for myself, and personally, I would not
: want to be the kind of person "who only obeys laws when the cops
: are watching". To me, that kind of person is untrustworthy and
: sleazy.
:
: Now some may want to label the above opinion as characteristic
: of an "RF cop mentality", but if you do, you're really missing
: the point.
:
: I don't support anyone going around "turning people in".
: Vigilantism is not the answer, and neither is ham vs cb
: trashing and bashing.

Hams have an obligation to be self policing. No other
hobby has that obligation.

: I make no claim to be morally superior, but I sincerely believe
: that a "looters mentality" contributes to a lesser quality of
: life -- for everyone. It can be argued that the politicians are
: responsible for our problems, but I don't buy that. I think we
: are each responsible our actions, how effect others, and
: how our actions ultimately affect the whole of society.

Small crimes breeds people who do bigger crimes.

Message-ID: <3801F6A4.CFAC4A0D@bright.net>
Source record: 129787

These are good ideas, but the problem is space. These bulbs mount
INTO the main board on the front of the radio and have little space
to have resistors or diodes tacked onto the back of the board...these
might touch the case of the radio when you mount the face back on.
What I was fishing for was a circuit modification - these units have an
automatic dimmer - and was hoping someone had hacked theirs into sub-
mission, or had a bright(?) idea... Thanks for all the replies!

- Adam -

That statement is just flatassed wrong. There is no "type
acceptance" of HF Amateur transceivers.

524. Re: Lightning - radio frequency

Newsgroup: rec.radio.amateur.misc
Date: 1999-10-11 00:00:00 UTC
From: Dwight Stewart <stewart@amouse.net>
Message-ID: <3801FC14.5C697419@amouse.net>
Source record: 129791

Lightning splatters RF energy all over the radio spectrum. I suppose
if you tuned to a low enough frequency, you could hear lightning bursts
from a great many miles away.

However, I doubt there is a single frequency that would allow you to
hear strikes all over the world. Not because the frequency does not
exist, but because the RF power output of a strike a great distance away
(such as on the other side of the planet) would be so small by the time
it reached your radio, the signal would probably be lost in the normal
background atmospheric radio noise of this planet.

Not only that, but since there is probably several dozen strikes a
second somewhere in this great world, and the RF output from each strike
would last for at least several milliseconds, any noise you might hear
on a single frequency, if it were possible, would be nearly continious
noise, not individual pulses from individual strikes.

Of course, I could be wrong. I don't spend that much time trying to
communicate with lightning strikes on the other side of the planet. ;-)

I do not see a problem with this. I at one time was one of the one running around with an amp for 11 meters. I think if we as ham operaters pushed amateur radio a little more and let people know they dont have to take the code test then maybe there would not be that big of problem. But on the flip side it is to easy to buy a cheap CB radio and amp verses buying a VHF/UHF radio. I dont think there will ever be a good answer though.

Your apology is accepted, "Frank/Gary." However, it's still interesting that you have now chosen to create a second fictional identity to discuss radio matters, when I and many others choose to use our real names and email addresses in postings on this and far more controversial subjects.

It's also worth noting that you've done this in a forum in which your confrère Timothy Volz regularly inflates his arteries and shouts "another no name nit!" when he is criticized by authors he deems to be anonymous. For some reason or other, Volz never criticizes anonymous posters who support his jamming and jammer associates. That, of course, is Timmy's hypocrisy -- not yours.

>

There are hundreds of open, public news servers. Use of them is not theft, nor is it fraud, as I'm sure you well know. I use one myself from time to time when my ISP's news server is having problems.

> >As far as Tim's jamming is concerned, there are examples archived
> >at:
>
> As I wrote, I've never personally heard KK7HO jam anything. IMO, your audio
> clip doesn't demonstrate malicious jamming.

Apparently, then, it is your opinion that repeatedly chanting "Nit Net, Nit Net, Nit Wit Net" and making other unwanted transmissions on top of an existing contact is not malicious jamming. Mr. Volz has engaged in similar behavior on numerous occasions, and has encouraged his friend Sid Mahan's even more egregious intentional interference, even going so far as to specifically request that Mahan play certain jamming tapes.

> Lastly, it appears the CIB also
> agrees with this assessment for their lack of action against the man.
[...]

That is a _non sequitur_. Many crimes go undetected; and even more go unpunished.

Volz's reputation as a liar continues to increase with his latest absurd allegation that the tape recording for which his friend Mahan must answer is unintelligible. Anyone may follow the first K5BLB link at

http://members.xoom.com/_XOOM/kevin_strom/amateur_3950.html

and hear for himself.

Happy Internetting,

Kevin, WB4AIO.

Will someone be kind enough to inform me if any punitive action was taken by Riley against Vicious Misek and his Nazi thugs on 3.950? I've been off this "bored" and the only changes I know of are that(1)the idiot N0VFP has been chased out(2)the idiot's mouthpiece, Martin "Bullchittum" went the same way. I had heard something about Misek DECLINING to comply with Riley's request and I learned that one can decline to respond to a man of his stature and authority? Gee, reminds me to tell the next cop I see to go to hell and start yelling"I got rights. I got rights." I welcome an INTELLIGENT reply to this inquiry. If you want to spout off about Jews, Blacks, Latinos. WB2OTK e.g.,take it down the road.

<wb5rue@stic.net> wrote:

> ALL Amateur Radio transmitters, receivers and transceivers
> that are sold commercially MUST be FCC Type accepted.

I'll repeat what I said to the other mistaken fella. There is
NO FCC requirement for Type Acceptance of any commercially
sold Amateur Radio equipment. Period. Not even for amplifiers.
(That'll raise some eyebrows!)

Here's the deal --

External RF Amplifiers -- These must be *certified* (key word =
certified) in accordance with Part 97 (97.315 and 97.317).
This was largely written to shut down mfrs of 11-meter capable
amps. It is NOT type acceptance.

Everything else -- most other amateur rigs get caught up in other
non-Part-97 *certification* requirements related to Part 15
emissions due to internal processors, non-reception of cellular
phone frequencies, etc., etc. A lot of other equipment is
subject to similar certification -- your PC, your radio/alarm-clock,
your walkman, and your wifes microwave oven. Again, none of these
have anything to do with type acceptance.

Type acceptance is a wholenudder animal, and no amateur radio
equipment is subject to type acceptance.

CB equipment is subject to type acceptance (in addition to Part
15 certification).
GMRS equipment is subject to type acceptance (in addition to Part
15 certification).
FRS equipment is subject to type acceptance (in addition to Part
15 certification).

Amateur radio is NOT subject to type acceptance.

Welcome to the Auxiliary Communications Service Newsletter, developed by the ACS Training Unit of the State of California Governor's Office of Emergency Services. Please visit our ACS Home Page at http://acs.oes.ca.gov

The purpose of this weekly newsletter is to bring those of us in emergency communications closer together by sharing common ideas, and by introducing new technology into the emergency services community. All individuals with an interest in emergency communications, disaster preparedness or helping the community at large are encouraged to participate here in an open forum.

You will find a virtual community here, with representatives from many different organizations with the same common goal: emergency response. We encourage everyone, from whatever organization you represent (or just yourself!) to bring us your ideas, suggestions, concerns, manuals, handbooks, or opinions so that we may share them with the group. To those of you who have just joined us, welcome aboard!
.....

>From the Editor's Desk:

Cheerie hi from Maine.

I am Rod Scribner, KA1RFD and have been the State RACES Officer
for over 10 years. I enjoy the newsletter and frequently find
items of interest, thanks for your time and effort. There
really is a need for coordination and sharing of emergency
communications info.

Our biggest disaster was the ice storm of 98. We were in the
dark for 2 weeks and most of the effort was providing hot food
and warmth for the elderly and others in rural areas. There
wasn't too much to do at the state level although VP Al Gore did
come by the RACES station one day and talked to the hams who had

emergency power. After that I went out and volunteered with the Red Cross for several days with a 2 meter radio in a disaster food truck from Pennsylvania (their radios were no good here in Maine) giving road directions to the driver and communicating to the various shelters on their needs and back to the base kitchen.

73 and keep up the good work
Rod
.....

Current Events:

From: "Rex Strickland" <rexstrickland@hotmail.com>

Hi all,

VATF1 from Tou-Liu, Taiwan. We are formally known as USAID's SAR Team 1. We arrived here at 0900 hrs EST, 2100-hours Taiwan Time. We instantly met up with a 16-person Advance team conprised of a mix of USAID, SAR-1 and FL-TF1 (SAR-2) members. They were working on 17-story building that took a heavy pancake collapse of the lower floors. The basement/garage area failed causing the punch-through and the entire rest of the building has a 20-degree lean. We split SAR-1 into two teams (RED and Blue) and began Rescue Operations with the Advance Team. They had made 5-hour progress on a 30-year old male that was trapped in one of the lower floors. He was trapped from just below the calf with significant impingement. The extrication took approximately 9-hours. He was freed at 0156-hours TW time and transported to a local hospital. He is expected to live with possible loss of his foot. The rescue was caught on tape in it's entirety.

The county we are in only sustained minimal damage with a total collpase of 4 buildings. All four were reconed and cleared at this time, (1939-hours 9-23-99.) We will go out again at tommorow and begin DEMOB later in the day. We are expected to stay one more night and then go to Taipai, where we will stay another night. We are expected back to the US on Sunday.

There are several international SAR teams in the country. As a result there is nothing left for SAR-1 to do. All options of moving to another area have been explored, but the damage to Taiwan is not as bad as expected. Contruction is relatively well in most of the structures. The buildings we worked were made from the same builder, with poor contruction. The four damaged buildings are all heavily damaged in the first few floors and are listings bad. They all felt the same way.

All personnel are safe and conditions are good here. We have set up the Base of Operations in a tennis court with good security. The people of Taiwan are very helpful and

appreciative of our presense. We all wish we could do more, but
there just isn't the mass destruction of Turkey, as well as the
presence of multiple SAR teams.

We thank you for your support and keep us in your prayers.

EMC204 DC Connectors Standard For release October 4, 1999

Following the bulletins on Battery Power we were asked more
about the cable connectors adopted for our ACS unit.

We recognize there are a variety of opinions, so this is what
we've learned and decided. Whatever connector you use we
recommend that you have several of them made up with the other
end unconnected, but stripped bare ready to connect. That way
you will have the clear opportunity to match whatever needs may
unexpectedly occur.

At State OES ACS we use the Anderson Powerpole for our standard use. We do recommend them for use by County and City ACS, RACES and ARES personnel in California so there will be fewer problems when units are working under mutual aid in support of each other. Obviously it is not mandatory. For those who use a different connector we urge you acquire some Anderson Powerpole connectors and make up a few "jumper" cables to interconnect between yours and the Andersons (or vice versa). That's prudent planning and reduces the stress when in a tight situation. It helps to show others that you are professionally prepared for the unexpected.

For our purposes we use 15 or 30 ampere sizes; however, Anderson lists sizes of 10, 15, 30, 45, 75, 120 and 180 amperes.

The connectors come in Red and Black. Due to the way they are mated they are genderless, in that the mating process can be altered to those cases where someone wants red (positive) on the right and black (negative) on the left instead of the other way (Red on left, Black on right) when viewing from the contact end.

To help more fully understand these connectors please refer to:

The OES web site: http://www.oes.ca.gov/ and select the "OES Divisions, Regions and Partners", then "Telecommunications" and then "ACS Reference Materials" and click. The ACS Connector page will open if you have Adobe Reader. If not, it's provided. Also:
http://www.andersonpower.com/
http://home.earthlink.net/~kbourne/races/sca/powerpole.html
http://www.94.cyberhost.net/depwr/info.html

Most users find them easy to assemble, change and dissemble. They are cleverly designed. Until you use and assemble one it's difficult to appreciate how - and why - they work so well. They can be connected to the wire by either solder or crimp. Personally, I prefer solder. Just be frugal with it to avoid oversizing the pin that will be inserted into the rear of the connector. A small blade screwdriver can be used to assist the insert process when placing the wired terminal into the plastic connector halves.

Thanks for your input to these bulletins. It's always a help.

Welcome to the Auxiliary Communications Service Newsletter, developed by the ACS Training Unit of the State of California Governor's Office of Emergency Services. Please visit our ACS Home Page at http://acs.oes.ca.gov

The purpose of this weekly newsletter is to bring those of us in emergency communications closer together by sharing common ideas, and by introducing new technology into the emergency services community. All individuals with an interest in emergency communications, disaster preparedness or helping the community at large are encouraged to participate here in an open forum.

You will find a virtual community here, with representatives from many different organizations with the same common goal: emergency response. We encourage everyone, from whatever organization you represent (or just yourself!) to bring us your ideas, suggestions, concerns, manuals, handbooks, or opinions so that we may share them with the group. To those of you who have just joined us, welcome aboard!

.....

Please Welcome:

Ree McLaughlan <ree_mclaughlan@fire.ca.gov>
Jackson, CA

As the manager of the CDF Administrative Training Curriculum, I am interested in identifying resources that are of value to our leaders of today and the future.

The CDF mission is to protect the people of California from fires, respond to emergencies, and protect and enhance forest, range, and watershed values providing social, economic, and environmental benefits to rural and urban citizens.

Current Events:

FEMA Sends $201 Million for Hurricane Floyd Recovery: More than 100,000 Disaster Victims Apply for Assistance

The Federal Emergency Management Agency (FEMA) has obligated more than $201.15 million so far for federal response and recovery operations in 10 states in the aftermath of flooding caused by Hurricane Floyd. Meanwhile, 103,936 people in 10 states have registered for federal disaster aid, with the majority of those applications - 56,137 - coming from disaster victims in North Carolina.

The $201.1 million includes more than $130 million in direct assistance for disaster victims for emergency housing, home repair and serious disaster-related needs. It also includes $48.8 million for tasks carried out by other federal agencies in connection with the emergency response, such as debris clearance, helicopter rescues and the delivery of critical

resources such as ice and water.

More than $6.1 million has been obligated for disaster unemployment assistance and $1.5 million through the Public Assistance program, which helps fund the repair of public facilities and basic infrastructure. The 10 eastern seaboard states declared disaster areas following Hurricane Floyd include Connecticut, Delaware, Florida, Maryland, New Jersey, New York, North Carolina, Pennsylvania, South Carolina and Virginia.

Meanwhile in North Carolina, more than 400 inspectors are checking damaged property, clearing the way for more disaster victims to receive initial grants to pay for temporary housing or home repair. Travel trailers also are being set up in a number of locations in the affected areas to house families displaced by the flooding.

People in the 10 states affected by the disasters are urged to call the FEMA disaster registration line at 1-800-462-9029 to apply for federal disaster aid. (The number is 1-800-462-7585 for those with speech or hearing impairments.) The hotline is operating daily from 7 a.m. until midnight until further notice.

Disaster victims who have registered for assistance and have questions about their applications or the application process can call the FEMA Helpline at 1-800-525-0321. (The number is 1-800-462-7585 for people with speech or hearing impairments.) The FEMA Helpline hours are 7 a.m. to 7 p.m., daily.

Following are highlights of federal response and recovery activities in the affected states:

North Carolina:

* A total of 56,137 hurricane victims had registered for federal aid as of this morning.

* FEMA funds obligated to date include $58.8 million in grants for temporary housing and emergency home repairs, $4.9 million for individuals and families to meet other disaster-related needs, $5.2 for people left jobless, and $22.4 million in mission-assigned emergency work and infrastructure support for state and local governments.

* The U.S. Small Business Administration (SBA) currently has approved $12.5 million in residential and business loans.

* Other provided assistance includes the delivery of 1.72 million pounds of ice, 1.5 million gallons of water, 173,000 units of ready to eat meals, more than 4,000 cots, and 69 power generator. The American Red Cross and other voluntary organizations have served 1.32 million meals.

* Damage assessment reports so far reveal 17,975 homes were impacted, including 4,046 destroyed, 4,838 with major damage and 9,091 with minor damage.

* More than 12,000 homes have been inspected and over 5,140 housing resources identified.

* Housing inspections are expected to accelerate with the addition today of 129 more FEMA inspectors, bringing the number of inspectors now working in the field to 429.

* Available housing resources are being supplemented by the addition of 505 travel trailers, of which 414 are on site and 111 of those occupied.

* The ARC has five shelters open housing 522 people and continues to operate 31 fixed feeding sites and 84 emergency response vehicles.

* A federal/state Disaster Recovery Center has been opened on Robeson County, bringing to 19 the number of such centers currently in operation in the affected areas.

* Federal environmental crews have recovered about 2,000 drums, tanks and other containers as part of the continuing hazardous materials clean-up effort.

New Jersey:

* Latest figures show 15,448 persons have registered for federal aid.

* More than $28.5 million in FEMA grants currently has been obligated for housing assistance and another $1 million for replacing personal property, paying medical bills and meeting other serious disaster-related expenses.

* A total of 8,334 homes sustained some degree of damage based on areas surveyed to date.

* FEMA/state Disaster Recovery Centers opened in Paramus, Somerville and Wayne.

* Seven mobile feeding sites remain open and 95,383 meals have been served.

* Five American Red Cross (ARC) shelters remain open. One ARC and another independent shelter are currently housing 239 people in Somerset County.

Virginia:

* Registrations for federal aid currently total 4,636.

* More than $8.4 million in FEMA funds has been obligated so far for housing assistance, grants to individuals and families, and

payments for disaster-related unemployment.

* An additional $3 million has been provided for
mission-assigned emergency work for state and local governments.

* Latest surveys show that 5,902 homes were damaged or affected
to some degree by the hurricane.

* A mobile Disaster Recovery Center has opened in Accomack
County.

* Federal health and medical specialists are working with state
agencies and U.S. Air Force for the planned aerial spraying for
mosquitoes in the western Tidewater area.

* A total of 16 drums and two pallets of one to five-gallon
containers were collected from flood-damaged homes.

South Carolina:

* The federal disaster declaration for South Carolina was
amended Oct. 6, 1999, to include Dorchester, Florence and
Orangeburg counties for Individual Assistance. Dillon County
was designated for Individual Assistance and all categories of
Public Assistance.

* Registrations total 7,571; funding $9 million.

Other States

* Connecticut: Registrations 519; funding $1.5 million.
* Delaware: Registrations 587; funding $3.3 million.
* Maryland: Registrations 1,371; funding $2 million.
* New York: Registrations 7,133; funding $5.9 million.
* Pennsylvania: Registrations 9,897; funding $15 million.

This week's EMCOMM Bulletin:

EMC205 Major Communications Change 1/2
To: Emergency Communications Units - Information Bulletin
To: Emergency Management Agencies via Internet and Radio
By: Auxiliary Communications Service (ACS) of the
California Governor's Office of Emergency Services

EMC205 Major Communications Change 1/2 For release 10/11/99

The adoption of the Response Information Management System (RIMS) has resulted in a major change in the way government passes emergency information in California.

RIMS is a computer-based two-way flow of information between the State Emergency Operations Centers and the Operational Areas. An Operational Area (OA) is a county and its political subdivisions. It is linked to the State via the County Emergency Operations Center via this computer system and "replicates" the database as frequently as every 15 minutes.

RIMS is a result of the Standardized Emergency Management System (SEMS) legislation and the need to pass information efficiently.

Under SEMS, if an Operational Area activates it's EOC, so must the State. The state has Regional EOC's (called REOC's) for the Southern, Inland and Coastal areas that are the key link's for their respective OA's.

Computer networks are provided by State OES with redundant setups at the Regions. The software used is based on Lotus Notes and provides for two-way replication of the data base for all authorized users of the system, which includes all OA's, State OES and other state and federal agencies.

This system got its early trial in the 1997 Floods which burst on the scene the same day the RIMS system was implemented. It proved to significantly improve the inter-communication between local jurisdictions and the state, helping each to pass the essential data on what was occurring, when, where, needs, etc.

Emergency Coordinators who participated at the local OA points of entry reported very significant improvements in the information flow - the essential purpose of RIMS. In the past, using the telephone, it had often required multiple calls into the same local office for information needed at different state agency levels. You can imagine the stress and load that put on the already stretched-out local office of emergency services.

Continues, next week, bulletin 206.

Hi there,

Apologies for the bandwidth. I'm constructing a list of stations who do and do not acknowledge SWL cards, so fellow SWLs know who to, and who not to bother sending to.

If you either do, or don't please send me your callsign and I'll include it in my database. If you do ackowledge them, but only do so direct, or whatever, please include those details too.

The information will be made available on my web site.
TIA es vy 73 to you all,
Karl - RS174461

Unfair and unjust again Doc.

Herb is no idol of mine, ha, ha. It is my personal belief that he has a behavioral disorder, to state it honestly.

Still, some crucial evidence was fabricated by the government: the list of calls Herb was accused of placing illegally. Their importance cannot be underestimated because without them, the case wouldn't have been brought in the first place. Two of the three felony charges, reversed post-trial by the judge, required a jurisdictional minimum of $1000. And only with the bogus printout was the jurisdictional minimum established.

Doc, having handled that printout, I can tell you that these two folks listed as Miami recipients of illegal calls placed by Herb did indeed talk with someone else at a different number in the U.S. Virgin Islands. It simply had no connection to Herb. One gentleman I recall well who gave me an Affidavit was the Miami representative of Brown and Williamson Tobacco.

Utterly unrelated in any way to Herb, he spoke frequently with the U.S. Virgin Islands on business. He had so informed the FBI too but that didn't deter the government, in a surprise move, from introducing the conjured printout into evidence.

Foisted on the court during the trial, the evidence was wholly unknown to Herb's attorney. On the premise Herb wouldn't be testifying, the lawyer had taken the liberty of portraying him as unfamiliar with computers. (Lawyers, of course, try to distance their clients as far from criminal allegations as the evidence will allow.)

However, when this false evidence surfaced, the attorney made the decision to put Herb on the stand. Herb then tried to conform his testimony to his attorney's portrayal. In doing so, he hesitated in his testimony, appearing demonic and untruthful. I remember the strain of that episode, as Houdini couldn't have wiggled out of it.

Apparently in his FCC hearing, Herb tried to defend the indefensible, his Court testimony. What a mistake!

He needed only explain the position in which he was thrust by lack of legal preparation and fabricated evidence, which had forced him to the stand. If he had told the story honestly, the FCC would have been satisfied with his candor at the revocation hearing, and he'd still have his license.

Doc, in my humble opinion, you demean yourself in making your points, some of which have good merit, by exagerating human failings.

Bob Sherin, W4ASX
Miami, Florida

Typical Rule worship attitude. I bet he doesn't even see anything wrong with his boss (big brother) poking his nose into his private affairs. It's a good thing our Founding Fathers are dead because they would be giving us a sound thrashing for destroying the country they created with their own blood sweat and tears....

552. Wanted: dead 51J-4 mechanical filter

Newsgroup: rec.radio.amateur.misc

From: Bob <xyz_p15218@flash.net>
Message-ID: <380256E1.390B75D0@flash.net>
Source record: 129819

Hello,
I need one Collins 51J-4 mechanical filter for parts to fix my 1.4kHz filter...it has an open coil..if you have one laying around with at least one good coil (should be about 20 Ohms DC), I'll be glad to pay shipping costs. I think I can use any of the 51J-4 bandwidths to repair mine as they all have the same DC resistance and presumably the same coil bobbin.
Thanks & 73
Bob

If You wonder why the DX 80 meter band is so narow, that is because some
countries use the lower part of OUR 80 meter band for varius services,
including fishing fleet.
It might have been an band opening.

You just don't have a clue. Every amateur radio in the US has to be
type excepted. Now I not talking about this junk sold as at your local
truck stop as a ten meter ham radio. Call Ten Tec, Icom, Yaesu,
Kenwood, Standard or any of the other manufactures of legal equipment
if you don't believe me or try calling a amateur radio store.

You mean to tell me that if I'm running an amplifier on 11 meter, I'm gonna be a bank robber in the near future?

Let me tell you all something here. Crimes are committed in one form or another. Hi-visible or not. It is up to Law Enforcers to sort out if there is a need for enforcement. Highway serial killers or Jaywalkers. Either way it is a crime. People can bitch, scratch, moan but the problems will not go away. Would you turn in a Jaywalker to a traffic cop and turn a blind eye to speeders, Identify your next door neighbor as a serial killer or turn your kid in to the schools Principle as a Truant? This whole argument over amplifiers on CB radio is downright idiotic.

I'll tell you why it is idiotic. Tech Plus ticket holders earned there right to use 2KW on CW by passing a pool questioned set of tests and passed a 13 wpm Morse Code test. What for? A mere 2 kilowatts. Wow! Don't get me wrong. Those tests are quite hard. But for 2 KW? Come on. Maybe in the upper frequencies, 2KW is the minimum to aquire long distant QSL's. But when you have an open set of frequencies existing on the 11 meter bandwith where no HAM transmitted and was a bandwidth no HAM were interested in transmitting on, the Federal Gov't said the heck with it. Lets give it to the people. And don't tell me that every HAM is a law obiding citizen, because when the 23 frequency bandwith was a Citizens Band set-aside, CBers wanted more. Just like HAMs. Talk further. Just like HAMs. And they didn't even need to take a simple test. As a matter of fact, all you had to do back then is just register for a CB Call-sign. What a concept. Now that the HAMs and the Federal Communications Commision had created a monster in their own image, they want to destroy it. Idiotic.

CBers will never stop. For every one CBer busted, five will take his place. For every one manufacturer put out of business, two will take its place. Its big business. Its not criminal. There are only a handful of Licensed HAM operators in this world. But there is a truck load that won't get their license and DX on 11 meter.

Just speaking the truth.

559. Balun.

Newsgroup: rec.radio.amateur.misc
Date: 1999-10-11 00:00:00 UTC
From: Titus Cheung <titus@ieee.org>
Message-ID: <TMuM3.2397$K5.32579@news1.rdc1.bc.home.com>
Source record: 129826

Dear List:

I need help for understanding how baluns work. One of the books I looked up attempts to give an explanation but I don't understand it. The book says the following:

"A wave traveling down the coax may have a balanced current mode, that is, the currents on the inner conductor and the inside of the outer conductor are equal in magnitude and opposite in direction. However, when this wave reaches a symmetrical antenna, a current may flow back on the outside of the outer conductor, which unbalances the antenna and the transmission line."

According to the book's diagram, I1 flows down the center conductor; I2 flows up the inside of the shield, I3 flows down the outside of the shield. Why isn't it just I2-I3 flowing up the shield. How can there be two current in opposite direction on the same piece of conductor? The ultimate question is, why would there be a I3 in the first place?

The author suggests that a sleeve (or bazooka) balun will solve the problem. I don't understand why it has to be quarter wave length long for the sleeve and how it works.

Please help
Thanks
Titus

You don't have a clue, not a single piece of my ham gear (which includes Collins, Yeasu, and Kenwood) has a type acceptance tag. How about all those Heathkits, Knight-kits, and other ham radio kits that were built and put on the air. Were they type accepted? I think not. How about all the home-brew equipment built and put on the air, type accepted? I think not.

Message-id: <24645-37FCBAF3-2@storefull-242.iap.bryant.webtv.net>

As another Jew who has spoken to you on ham radio, I believe your
rhetoric tarnises the Jewish faith.

Above all, Jews are for justice. Whatever Herb did, however you feel
about it, the most important thing isn't to railroad him out of ham
radio. No--paramount is that the "law be faithfully exectuted."

Even though I have a negative outlook on his prospects, Herb is due the
same due process that any of us expect from our system. Let's not throw
the baby out with the dirty water!

Bob Sherin, W4ASX
Miami, Florida >>

<<Railroaded my ass. You've been pulling your psychocrappola about Herbie's
innocence for lo these many years and I would have thought that by now, after
that creep sold you a linear stored in the Caribbean Sea, you'd know the demon
from the angel. You always were a pathetic shnook giving out with your"Herbie
was railroaded...Herbie only used bad judgment...Malcolm Ford bankrupted his
own company...Herbie was convicted by a lynch mob" and all the rest of the
sanctimonious tripe. Wise up, Bob. You were USED and any Jew who defends a
bastard like Schoenbohm is a traitor to his people. KV4FZ is a slimy
anti-Semitic convicted felon who is going to be chucked out of ham radio for
good and your excuses are worthless. You intimate he was not given due process?
You're nuts-he's been given TOO MUCH due process to the point of
ridiculousness. His appeals have been laughably frivolous yet TOLERATED by an
irate FCC and you cry foul? You say Jews are for justice. In your warped mind,
your sense of Jews for justice is to allow a slimeball to get away with hell.
To subvert the system. I say KV4FZ has gotten enough justice-it's time that ham
radio get justice by having that bum kicked off and out.

>So, will they get serrious enough to visit eBay on occassion to check all the >amps being offered there?

eBay really talks out of both sides of their mouth as far as their prohibitions against "illegal equipment" are concerned.

They do not allow the listing of scanners which have been modified or are ABLE to be modified for cellular phone reception, even though possession and sales between individuals of these radios is completely legal. Yet, they allow linear amplifiers to be listed and sold openly in the "CB" section of their forum. Items which are most certainly illegal for both possession by and sale to unlicensed (CB) operators.

What's wrong with this picture?

Source record: 129915

I can hardly believe that I wasted all this time reading over 50 posts on this subject. All I have to say is whenever I hear ANYONE on AM in the lower portion of 10m, I listen for a good while...as soon as I note that 10 minutes has gone by and the operators are using language I wouldn't dream of (and I am one foul-mouthed son-of-a-*itch), I switch to CW right on "their" frequency, I max-out my AL80A, put the vertical beam in their general direction and jam the livin' *hit out of them. I CQ my freakin' lil paddles off. I get every damned light in my house flickerin'. Call it what you will...I, a licensed amateur radio operator, CQ and CQ and CQ intentionally right on top of the illegal CBer who doesn't know where his "mod" to his radio has taken him. And remember, there are plenty of "Freebanders" and "Graybanders" who do know right where they are...in the CW portion of 10m because "no one seems to be using it, why not us?" With my license on the wall right there under the American flag right over all my Japanese radio gear, I proudly excercize my privilage of trying to stir-up a conversation on the radio with anyone anywhere...it just so happens I prefer the lower portion of 10m as do these unlicensed *ss*oles. I can usually cause them to change channels as they say...if I'm really bored, I'll look for them again and do the same thing. It feels good to stop keying and hear these guys going away... some mad, some just done talking and trying to hear eachother, but the point is that they go away. Sometimes, like over the road truckers are so close to eachother there's just no use, but most others if they are at fixed locations and distant to eachother, I can get to grinnin' in 10 minutes or less. Of course, it's even better when my call gets answered by a fellow ham...then I can lower my power to just the necessary output level to carry-out the desired communication. Jamming? You're damned right! Intentional interference? You're damned skippy! Malicious? Ab-sa-freakin' lutely! Endangering my license? Absolutely not! I have the right to be there...Unlicensed boot-leggin' *erk-*ffs have no rights. I can CQ anywhere there is not a licensed conversation on-going. If ANYONE is within my license privilage allocation, using frequencies I worked at to obtain the privilage of using...it's really quite simple...they have no privilage. If there were more CW operators out there with *alls, and would not be so *hicken-*hit and be affraid to "talk over" these illegal operators, they all just might get tired and therefore, get the message...STAY OFF 10m! Criticize what I do. Criticize what seemingly few of us do. But don't sit there and gripe about the situation and say that someone should do something about it. The FCC does not have the resources. WE DO! Got a keyer?Got 10m privilages? Got B*lls? That's the problem...So many complainers, not enough b*lls.

'till next time, I'll be found near 28.010-050 or so...p*ssing-off as many unlicensed folks as I can...CW CQing as slowly as I can. Just like *ex...wanna make the fun last.

The K5BLB Liberty Net Fan Club is currently meeting on 3950 khz. K5BLB, N5OUG, K1GKM, K5MVK, KK7HO, etc., have been in there for HOURS talking about the Liberty Net. Here's a sample quote:

"blah blah LIBERTY NET blah blah blah LIBERTY NET blah blah blah EAST COAST blah blah blah blah blah W1WCR blah blah blah blah LIBERTY NET blah blah blah VIC blah blah blah LIBERTY NET ...."

These clowns are hilarious. They hate the Liberty Net so much, they spend all night talking about it! LOL!

<phughes@worldnet.com> writes:

>This is his broadcasting tactic of pretending to
>talk to another ham, who you can't hear because of 'atmospheric conditions'.

"Broadcasting" is an accurate description. David Castle was giving out his
e-mail address every 10 minutes or so and asking those who were interested in
hearing "the truth" about the Liberty Net to e-mail him for information.

Since all 3950 participants already KNOW more than they care to about the
situation, Castle's plea to distribute propaganda was obviously aimed at
SWL'ers. Hence, the term "broadcasting" is correctly applied here.

In case you missed it, Castle's e-mail address is: wa9kji@aol.com. You might
want to drop him a line and let him know you disapprove of his jamming and
provocation techniques. Also, remind him that broadcasting is illegal on
amateur radio.

Note: this address does not accept unsolicited e-mail. Please contain all
discussion regarding USENET posts to the appropriate newsgroup thread.

Hi, Frank. Why not come right out and tell us who you are?

As far as Tim's jamming is concerned, there are examples archived
at:

http://members.xoom.com/_XOOM/kevin_strom/amateur_3950.html

There is also, just added to the site, a .wav file of the recording
which Tim's co-jammer, K5BLB, must explain to the FCC -- the
recording which Tim claims "isn't even able to be understood."

Listen for yourself, and decide if Tim is lying again.

With all good wishes,

Kevin, WB4AIO.

580. Lightning - radio frequency

Newsgroup: rec.radio.amateur.misc
Date: 1999-10-11 00:00:00 UTC
From: Merv James <mwjames@ozemail.com.au>
Message-ID: <3801CAE7.B55FC7CD@ozemail.com.au>
Source record: 129928

In the past when there have been electrical storms in the area, I've turned on my
portable radio to let my two young sons hear the lightening strikes going on around the place. Usually I've gone to the lower end of the Medium waveband to do this.

There was a TV program called the Raging Planet which dealt specifically with
lightning. The narrator implied that there was a certain (specific) frequency at which all the lightning occurring in the world (in real time) could be heard. Does anyone know what this frequency would be?

Yes, I know - not the usual content of such an august body of amateur radio enthusiasts, but I would greatly appreciate some information. :-)

vlf frequencies can be monitored for the noise level, which is a
continuum of the lightning strikes all around the world, and can be
monitored for solar activity, as the noise level increases and decreases
with effect of solar activity on the ionosphere.

Bill <billsohl@planet.net>
WHy do you cross post when it only shows your like of knowledge of the subject to hams and CBers alike. I called several amateur stores today HRO, AES, R&L, Micigan Radio and Communication Headquarters all said that amateur radios had to be type excepted by the FCC before they could be sold legally. This said I must conclude you ether don't know what you are talking about, knowingly telling what you know is untrue or the the rest of the professionals in amateur radio know nothing and you know it all. I can only conclude that by your amateur license class you don't know it all, so I'll believe those that know more than you.

Sorry, but those are apples and oranges.

A pipe bomb has the potential to harm non-consenting
individuals. A kilo of heroin (assuming it is sold to adults only) does
not.

A person has a right to harm him/her-self if they wish. It isn't
terribly smart. But it _is_ a right, regardless of rather society has
been brainwashed into believing it isn't or not.

A person does NOT have the right to harm others, however.

>Any ham who's operated the 10 or 12 meter or even 6 meter band within a
>few miles of a CBer using illegal equipment has probably been hurt by the
>interference.

Why?

If the equipment is high quality and properly adjusted, in what
way should it matter to the ham whether it is being operated on 11m by a
freebander or 10m by a ham?

> Many CBers have bizarre standards for "good audio"; such
>audio in any other radio service would be regarded as vastly overmodulated
>and distorted. To achieve such audio, many CBers remove audio limiters
>and crank up amplifed mics to the maximum.

True--but this is as much from ignorance as from any deliberate
attempt to cause interference in many cases. If a CB'er learns that
over-modulation does NOT increase his signal in any way, but instead
simply distorts it--and is shown how to _properly_ adjust his mic gain
and compression for maximum signal strength and readability, he is far
more likely to do so than not. This is particularly true of freebanders.

There are plenty of CB'ers who enjoy interfering with other
stations and "showing off," but simply because there are immature idiots
in any group doesn't mean all CB'ers are the same.

>Once such a dirty, possibly spur-ridden signal is put into a crappy,
>non-type-accepted amplifier, the end product can be downright scary, with
>a wide range of splatter and even stronger spurs. One local freebanding
>CBer actually used to "kerchunk" a 6 meter ham repeater with his spurs.
>I've personally experienced bootleg 11 meter splatter on 50 mHz.

True. But again educating the individual would probably help a
lot.

An additional point. You make it clear that part of the problem
is crappy, non-type accepted amps. Perhaps if we eliminated the laws
against the sale (but NOT the use) of power amps to non-hams we would
reduce that problem. There would still be as many freebanders and CB'ers
using the equipment illegally, but at least their signals would be clean
and confined to the frequency where they were transmitting instead of
splattering all over the band.

>Many CB amps are Class C, which I believe (correct me if I'm wrong) is
>intended for either FM or CW. Using such an amp for AM or SSB causes a
>wide range of splatter.

But why do they buy Class C amps in the first place? (Hint: It's
all they can get).

>I've known no hams to use CB amps on 10 meters. Once 10 is open, the many
>compact 25 watt mobile rig are usually adequate "barefoot".

Listened to any dx on 10m lately? I can _guarantee_ that hams
are using high power amps on 10m--as a low power and qrp op I regularly
find myself having to crank up my rig to at least 50W to even be heard
among the other stations--and 100W is the least I can hope to use if I
want to work a fairly rare country much of the time (while my preference
is to work at 5W or less).

The dx stations in many countries, btw, are running the same
"export only" amps that some of the freebanders are running--complete
with 11m capability--even though they are on 10m. Why? Because they sell
enough of the things (to CB'ers) for the prices to be lower than they
are for US-sales 10m amps of the same power.

Rick

Funny every pice of HAM gear I have is type accepted, and I have never
seen a piece of HAM gear thats not type accepted, and I'm not talking
about 10m anything, as most of it is designed to be moded anyways.

OK
Commercial equipment has to be type accepted, but unlike CBers HAMs are
allowed to build there own equipment (even mod it) and that stuff does not
have to be type accepted.

Unless I am mistaken,

1. Tech Plus ticket holders have to only pass a 5 wpm test.
2. Tech Plus are only allowed to operate in 'Novice' CW subbands, up to the Novice power limit in those bands, which was 200 watts the last time I worked HF.
3. General Class license holders are the ones that pass the 13 WPM test, and have access to the full nine yards, i.e. 1500 w PEP.

Naa...

Dad and the fam wont be cold. Got all that covered as well as plenty of A/C & DC juice for an extended time. Don't really expect to use it at all but if I ever did have to it wouldn't be to CQ or "phone home". I just don't trust what the government might tell me in a crisis (go figure...). I'd like to get my info from folks a notch above "howdy good buddy" but twenty pegs below "Mr. Bill" and his entourage. I figured you guys are the best group to turn to. You've got brains and coverage on your side. Trying to shut down every ham down in the country would be impossible and trying to censor what you say,,,,, well the responses are a good testimony to the fallacy in that notion.

By the way, I really meant the part about not keying up. Unless I was the only one with some type of critical info or my family's good welfare is on the line anything I'd have to say would just add to the confusion. My time would be better spent listening than talking. ('course the net is another story. Around here I tend to ramble on way too much... as they say talk is cheap.)

No,
but the rooftop antenna installation is what first attracts anyones attention.

I get griped at by the neighbors for creating interference, the local
neighborhood association has been trying to force me into removing
the installation entirely (I was here before they were). and it seems as
though
everytime there is a problem that is radiop related, I also get that knock on
the door
asking what I am doing? etc.

There are 2 hams that live close by and theres a 25 KW am transmitter located
in
a field just east of my location (910 KFYI).

So, I don't see why I have to put up with all the bitching. I meet all FCC
requirements
here (even had the fcc come in and do an inspection to determine where the
problem was).

This is why I get any attention at all from the neighborhood, I have a very
visible setup.

Forfeiture. Now that's a great idea. That's like giving government enforcement officials (police, DEA,
SBI, FBI, FCC, etc.) a blank check. Since forfeiture falls under civil law it's not "not guilty until proven
innocent" but "preponderance of the evidence". Many people have had items (cars, houses, money)
seized by the government who were NOT guilty yet could not afford the civil trial to get it back.
Unless you have been in a cave for the last 10 years you couldn't help but hear the many horror stories
told by honest innocent working folks who got tagged beacuse they had too much cash or a kid who sold
a narc a joint. The bad guys can afford to lose stuff to forfeiture.

I have heard Texas drug enforcement officials "shopping" for vehicles to stop. No lie. I heard and watched
them stop and detain 2 Hispanic young men who just "fit the profile" (not many Hispanic folk in Texas...hi. hi.).
They had $600 in cash and a new truck. The undercover officers had followed them from Austin and had the
local police dept. stop them and call the dogs out.

The officers then spent the next hour talking on their radios about how their boss would like a new truck, and
how the cash would make a nice addition to their training ("entertainment") fund. Well the 2 men had the
money by legit means (receipt from selling some tires and rims)), they were searched (twice) and basically
hassled just to "maybe turn something up" (direct quote). After they let the men go I continued to listen
to the officers while they headed back to Austin, "shopping" for a new SUV. They actually pulled into a
gas station and scoped out one guy who they were sure "fit the profile" (was ethnic and had a nice ride)
but they decided not to hassle him after he turned out to be a local deputy. I really wish they had called the
locals on him.

BTW, The Chief of police in this Texas town drove a nice caddy thanks to a hapless pot smuggler who
stopped in the wrong rest stop. Having that nice car available for the Chief was definitely a crime deterrent.
Wonder what he drives now...

Forfeiture. BAD IDEA. Unless you live in a police state...

CUL,

Just a simple call to the FCC would eliminate so much of this. Come
on guys. Daves absolutely right!

Subject: ** FLEA at MIT ** Sunday August 15th Cambridge MA
Summary: Buy Sell SWAP Ham Radio Electronics Computers 9AM - 2PM

This coming Sunday ... The Seasons LAST...

*** !!!! In our Traditional GARAGE and lot !!!! ****
so come rain or shine or super heat the Flea is on !!!

********* $1 buyers discount with hardcopy of this notice ********

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS - HAM RADIO

FLEA all SUMMER at MIT
Sunday, October 17th 1999
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 600 sellers and
free, off-street parking for >2000 cars!

Buyers admission is $4 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $10.00-each at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

*** Attention Sellers ***
Prepaid vendors.. Season Pass or monthly,
will be admitted FIRST.
Separate lines will form prior to gate opening
for prepaid and nonprepaid vendors

!! RAIN or SHINE !! Have no fear of rain, a covered
well illuminated tailgate area is available for all
sellers (6'8" clearance).

Talk-in: 146.52 and W1XM/R-449.725/444.725 (PL 114.8/2A).

Sponsors: MIT Electronics Research Society
MIT UHF Repeater Association (W1XM)
MIT Radio Society (W1MX)
Harvard Wireless Club (W1AF)

For more info / advanced reservations 617 253 3776

I am wanting to get my ham radio license and am wondering if anyone has any software to help with the process such as practice test or software to learn Morse code. Any links or information that anyone has would be greatly appreciated.
If you have any software you could share or any links to sites with info, please email it to me directly at Blueglow@mindspring.com

Thanks,
Blueglow

You guys are all forgetting that the trouble did not start with the VE program. The VE program, in my opinion, is a good idea. The downfall of the amateur radio service, since I've been around, began before the VEC's came about. It began with the Nash books. Which were spawned and supported by the OEM's themselves. Remember that CB was all the rage in the 70's and the OEM's saw a huge market of "radio heads" just biting at the bit to soot some skip on the ham bands.

The real demise came with the flood of commercially made gear in the 60's.

Indeed! If type acceptance were needed, then we couldn't put any of
our personal home brew transmitters or amplifiers on the air at all,
since I don't know of any hams willing to spend the time and money to
have their equipment put through type acceptance testing.

By definition, IT IS NOT type acceptance, otherwise all those transmitters you've built over the years are illegal. Right!

Of all the Bulverisms (see the C.S. Lewis collection "God in the Dock", part III, chapter 1 for an explanation) I've read online, this is one of the silliest. Exactly how did you come up with this "insight" into Hawke's motivations? Do you have a gift of telepathy you haven't told us about? Have you commissioned PIs to investigate his life? Out of all the miriad reasons why a person might be an swler, but not a ham, is there any valid reason you can give why you picked out this one?

>Your statement doesnt make sense, your not a ham ,but
>you have to put up with comments from non hams and cbers.

It made perfect sense to me. He has no transmitters, but does have a quite visable antenna system. Because of the visable antenna system, his neighbors tend to blame him for every little glitch on their TVs, radios, and phones, despite the fact that he's not operating a transmitter. This is a problem any ham should empathize with.

Doc,
What parallel can you draw between Jews, Blacks Lationos? JEW IS NOT AN ETHNICITY! You could say Semite, but then you would have to include palastinians with that group also.

As far as I know a person can say what they want about another's religion without invading their rights. If I say that all Catholics are Guilt ridden drunks with homosexual clergy, they try to run the government and they should al be sent back to Rome, well I don't know many Catholics who would get so worked up about it that they would start playing the race card, even though they used to be fed to the lions and used for bloodsport too. Its apples and oranges my friend. EVERYONE has a CHOICE as to what religion they follow. NO ONE has the CHOICE of what ethnicity they are.

So go ahead and split your usual hairs and pick your usual nits, Slick. Each new commercially built piece of amateur radio transmiter apparatus must *topday* be approved, as a unique type, by FCC before it can be sold BY FCC REGULATION. THAT *is* indeed type acceptance, for each subsequent copy of that model does not have to be individually approved. It was not always so, just as it was not always illegal to commercially produce amateur amplifiers which work on 10 meters.

It was not stated that amateur gear is required to meet the exact same type acceptance as commercially used equipment. That would be pointless since all of the standards are not the same. But it is nontheless type acceptance. Its A Fact.

Looks like you may have answered your own question even if
you don't know it. The equipment, whether or not of high
quality, is clearly NOT properly adjusted and in instead
splattering spurious sidebands all over that part of the
spectrum.
I have long been a user of a conventional 5 watt CB set
with a small magmount antenna, for use on the road when
travelling with another vehicle whose occupants aren't hams,
for on the road communications. One thing you quickly learn
is that you don't have to see the trucks to know they are
coming. Their splatter from Channel 19 down to the RV
channel 14 is warning aplenty.

Which pretty well proves the point- Most of those folks
DON'T WANT to learn a nything about radio, rather they
just want to yak without constraints.

>
> There are plenty of CB'ers who enjoy interfering with other

That's true. But the numbers of those who just don't care
are quite large.

> splattering all over the band.

So you'd advocate going from what doesn't work *now* back
to what didn't work BEFORE FCC instituted the rule against
building 10meter -capable amps. Right.

>
> >Many CB amps are Class C, which I believe (correct me if I'm wrong) is
> >intended for either FM or CW. Using such an amp for AM or SSB causes a
> >wide range of splatter.
>
> But why do they buy Class C amps in the first place? (Hint: It's
> all they can get).

Don't think so. CB'ers and hams mostly use LINEAR
amplifiers. Class C is about as non-linear as it gets. Maybe
you've heard of class A as the most linear, class B operates
on about half the RF cycle and class C is almost pure square
wave. Anyone attempting to use a Class C amp as a "limear"
is totally uninformed. And since ham band "linears" were so
often being used on CB, the FCC ruled against their
construction as 10 meter capable units, as noted above.

Many CBers DID use class C equipment when hams mostly
abandoned AM gear, which did use high level plate modulated
Class C amplifiers on AM.

Many old Johnson and Heathkit ham band rigs -with VFOs that
were factory built to operate on the 11 meter band, when it

was a ham band- were and still are used by some CBers on AM.
Mostly that is the extent of Class C amp usage on CB.

Almost without exception all SSB amps in use on both ham
bands and CB operate class AB1 or AB2 (slightly more than
50% of the RF cycle is amplified) and are classed as Linear
Amplifiers. **BUT**, only when adjusted and operated
according with their technical requirements for maintaining
their linearity. Overdriving, mistuning, impropper loading
all destroy their linearity, and since no CBer is required
to learn anything, and no Freebander is constrained by much
of anything, is follows as no surprise that so many
extremely dirty signals eminate from the 27mc region. And
this is the reason why CB gear is required to be type
accepted, is forbidden to be altered or modified and is also
the reason why so much of it is modified for CBers.

>

> is to work at 5W or less).

I haven't checked 10 meters lately, but when 10 is open,
you can work the world on 5 watts with a wet noodle for an
antenna. Power is *not* necessary, unless serious band
congestion demands it for overcoming interference.

> The dx stations in many countries, btw, are running the same
> "export only" amps that some of the freebanders are running--complete
> with 11m capability--even though they are on 10m. Why? Because they sell
> enough of the things (to CB'ers) for the prices to be lower than they
> are for US-sales 10m amps of the same power.

There's no question that CB-Freeband has created a quite
large market for ham radio gear-all of which has alway been
and still is, used illegally. There are large numbers up
there who have decided that "it really doesn't matter what
the law says, no one cares what we do". It was and is a
travesty of extreme proportions. But not they are becoming
emboldened.....

FCC had no idea what they were creating when they placed
the Citizens Band on 27 mc. When they found out, all they
could is mount whatever feeble attempt at enforcement that a
disinterested and uncaring Congress would fund. This was so
ineffective against such widespread flagrant and almost

universal illegal activity, that it ultimately faded to black. The rest is history. That history **MUST NOT** be ignored by the regulators of today who must decide the future of ham radio.

The one lesson that comes through loud and clear-- *THERE'S NO TURNING BACK** Once it's done, it stays done.

But they have been told that class c amps are more efficient, no matter that if you try to push SSB or AM through one all you get is a lot of distortion. Most cbers don't seem to intent on communicating, just on having a "big signal" (lot of noise) on the band.

What a ridiculous assumption! How do you figure the heroin addict gets the MONEY to support his/her drug habit? CRIME against "non-consenting individuals" is the usual method-of-choice.

No HF frequencies have been or will ever be auctioned to commercial interests. As services depart HF for UHF+, that portion of the spectrum will be come a ghost town. The trend is to give unused HF frequencies to amateurs (witness the three bands given to us from WARC '79, and more are on the way [NTIA proposal]).

At one time, amateurs had all wavelengths below 200 meters -- this time around, we might eventually have everything below 160m.

Oh?
based on what facts?

I hate to say it, but a fair number of the CB crowd here in Arizona
are NOT HAMS! They go into Ham radio outlet, buy the equipment
they want, WITH CASH, walk out, have some two-bit cb dealer
modify them for open band use and there you have it. Its almost cheaper
getting a "rig: with 30 MHZ of capability than buying an "Export model CB"
with only 4 MHz of capability and 1/5th the power.

I should know, I have a neighbor up the street that insist on running
5 KW out of his house on 27 MHz when I am trying to watch the channel
5 news! In doing a little research, I have discovered that, in fact, only
about
30 or so hams ever bother with the CB band locally, and perhaps only
about 10 of those attract any attention to themselves with high power and
potty mouths.. Considering that most of this group of hams hangs out
on a simplex frequency smack in the middle of the 2 meter band, we know who
the trouble makers are.

Secondly, I am not a ham, but I have to put up with comments from non-hams
and cb'ers about my SWL Installation.. so, I have come to this opinion: if
you
don't like it, do something about it! otherwise, shut up!

http://sm0vpo.8m.com/
http://www.geocities.com/SiliconValley/3569/
http://hem2.passagen.se/sm0vpo
http://members.xoom.com/sm0vpo

There you will find loads of projects documented projects including antennas, transmitters, receivers, PSUs and many many usefull circuits. PCB foil patterns are included for many projects and there are even photograph illustrations of the more recent projects.

I have recently included loads of freeware and shareware software packages for PCB drafting in the DOWNLOADS section. All the more recent PCB component layouts and PCB-foils are in BMP format so that everyone can read and print them (they are zipped).

Amongst the more recent projects added to the page are:
- TBA120 NBFM receiver - 100KHz to 100MHz, change two coils & crystal.
- Simple 4-watt AF amplifier - much better than the LM380.
- Extending the Balcony Antenna using Fractal & Meander principles.
- VHF digital direction finding system.

The site is well worth a visit. I hope you have fun - Harry SM0VPO

627. Download problems

Hello folks
I recently got into amateur radio.From what I can
see it was a big mistake. I went to my first ham
fest on a local level and the caliber of people there
were nothing but low lifes with missing teeth. I
thought I was at a carnival. Is this what amateur
radio is all about. I thought the class of people
would be much better. These people I dont think even
work. They sit around shooting their mouths off on
2 meter repeaters day and night. Get a job fellas.
My wife makes fun of me now all the time. She said she
is embarrased by the whole scene. She kids me that she is going
to get me a hat with my call letters on it for my birthday and
buy me a pack of camels.She also wants to know when I am going
to have my call letters put on my back windshield. Any suggestioins
Is this what amateur radio is all about. Maybe I need to get my
upgrade to the hf frequencies where the people have more intelligence.
I dont know what is worse the carnival or the people in amateur radio.
I am going to sell my equipment and get back into motorcycling.
I think Burt Fisher is right RIGHT ON BURT WAY TO GO

Sent via Deja.com http://www.deja.com/
Before you buy.

Believe whatever you want. Ham rigs are not
subject to type acceptance. I'll repeat again that
they are tested for compliance with certain other
FCC rules and regs, but none of that constitutes
type acceptance.

Cheers,
Bill K2UNK

What else can I expect from you Dick? You ignore
reality in your comments above. You wish to expand
"type accepatnce" to mean something it isn't.

Type acceptance has very specific requirements for
each and every different service that type acceptance
equipment in called for by the FCC rules. Please show us
where in Part 97 there is any mention of type acceptance.

Cheers,
Bill K2UNK

Sigh. Here we go again. Amateur radios do NOT NOT NOT need to be type
accepted. Type acceptance is only used on bands where the operator is
not responsible for technical conformity. Since hams are "supposed" to
be technically competant, the radios do not need to be type accepted.

Most people confuse type acceptance with part 15 compliance. ALL radios
must be part 15 compliant (Also known as "FCC approved").

Look again. Does it say "type accepted" or does it say "FCC approved",
they're NOT the same thing. FCC approved means that it passed part 15
tests, it has nothing to do with type acceptance for particular radio
services.

Non of my ham gear is type accepted, but they all have an FCC id number
and "approval".

And I'll counter that most likely the $6 a hour flunkies that work at
these store don't know the difference between "FCC approval" and "FCC
type acceptance" either. There IS a BIG difference. ALL radios must be
"FCC approved" for compliance to part 15 emissions requirements, but
only radios manufactured for certain radio services need to be type
accepted. The Amateur radio service in NOT one of them.

You are just a witness to the state of amateur radio today. All due to the VE program, the invasion of the CB crowd into the once proud hobby. fifty years ago it was a differant scene at ham fests, Fellowship, not trashy flea markets and loud mouthed trailer park yahoos. Very sad.

The Armenian judges gave it a 9.8 on the Olympic Troll-O-Meter,
but they were over-ruled by the umpires in instant replay, who
award it a 5.6

The Armenian judges lodged a formal protest!

It was sufficiently trollish, of course, but way too obvious.
It was poorly written, poorly executed, and was so incredibly
lame as to lack the true drawing power of a really masterful
troll. Maybe as high as a 5.9 for the sheer stupidity of the
premise, but a 9.8? Never! The Armenian judges tear their
hair out, throw their balalaikas down in dismay, and perform
the traditional Armenian Dismay Chant! They demand a recount!

Regards,

Hans, Lord High Keeper of the Troll-O-Meter

Doug,
You get out of it what you want.

I too have the same feelings and experiences. My XYL Calls me a nerd sometimes (lovingly of course), but you don't have to go to swap meets, or the coffee shop. To enjoy ham radio. I have been a ham since I was 10 (33 now) and have put it down several times but I always find my way back. My interaction with the hobby is on air CW only. I used to do some voice modes, but I really found that the CW part of the hobby is best for me. You might get into someting like RTTY or AMTOR, EME. These type of operators tend to be more tolerable. That's my opinion.

And what else can we expect from YOU, Slick??? Spin, spin,
spin.

The fact that type acceptance for amateur radio equipment
does not meet the exact same criteria for "Type Acceptance"
in the commercial radio services does NOT mean that it is
not type acceptance. DE FACTO that is exactly what it is.
When the advertising said that the Yaesu FT100 transciever
was not yet available for sale because it had not been
"approved" for sale by the FCC, what it was saying is that
it had not yet been tested and had not yet met FCC's
emissions purity standards. In short, it was not yet type
accepted. When the sample model passed those tests, all
FT100 radios would be legally approved for sale. THAT is
type acceptance, if not "Type Acceptance".
It is still a fact.

>WARC '79, and more are on the way [NTIA proposal]).

The advent of digital radio will change all this. Relatively low-frequency AM signals have the same high-fidelity characteristics as higher-frequency FM signals when digitized.

We lowly CBers having no class came close. Those operating SSB usually
just used the single word *STATION* which is quicker and might slide in
between two mike (for Roll) clicks.

At least ole Burt gives us all something to laugh at(mostly him). He tries so hard to tell us all, that we are dead. (I don't feel dead)
I sure hope he is having fun here, because it keeps him off the air. (Thanks to the group for that)
I pity him. He can't even enjoy the hobby, because all us "dead guys" are on the air all the time, taking up space the he could better use, for whatever it is that he does.

Hi Big Boy,

Watch my lips -- closely -- really closely.

Are you paying attention now? Here is comes.....

THERE IS NO FCC TYPE ACCEPTANCE ASSOCIATED WITH THE AMATEUR
RADIO SERVICE IN THE UNITED STATES OF AMERICA.

There is no wiggle room at all in that statement. None. Nada.
Zippo. Zilch.

There is no de facto type acceptance, nor is there any de jure
type acceptance associated with amateur radio.

This is not splitting hairs. This is not picking nits.

If Amateur Radio equipment required type acceptance by the FCC
you could not build your own equipment. You could not modify
any type accepted equipment from another service for use in
the amateur service. You could not modify commercially built
amateur "type accepted" equipment you purchased. Further, the
FCC could cancel any previous type acceptance and make your
new FT-1000D immediately obsolete and unusable in the
amateur service just because it didn't want you to run LSB
anymore.

Pure and simple, there is nothing which even resembles type
acceptance in the Amateur Radio service. Thank God!

Challenge: Point out where, in Title 47 CFR Part 97, it is mentioned
that amateur radio transceivers must meet type acceptance.

(All you will find are limits set on spectral purity. Ours is the
only radio service in which operators are entrusted to have the
technical competence in which to abide by the stated regulations;
this privilege of trust is due to the amateur's self-policing nature.
We either abide or lose our license.)

This is exactly right. Somebody else mentioned FCC conformance, or certification. That is also correct. Some local, county, and state agencies require electrical equipment to have UL and FCC certication (where applicable) if it to be sold new through retail outlets. Manufacturers are anxious for their products to conform to these regulations. One issue involved in certification now seems to be whether the equipment is easily modifyable to receive 800 MHz cellullar or not. Amplifiers must not be easily modifyable to operate on the 11 meter band.

It's rumored that KK7HO and K5BLB will say their vows
this week in observance of the national gay "Comming Out Week".

Volz, and Mahan, well known for their devotion to one another
via shortwave radio, will 'make it official' in a ceremony on
Las Vegas, Volz's home town.

Best man will be K5MVK, and Maid of honor will be WA9KJI.

More details will be posted here as they become available.

```
: > ALL Amateur Radio transmitters, receivers and transceivers
: > that are sold commercially MUST be FCC Type accepted.
:
: I'll repeat what I said to the other mistaken fella. There is
: NO FCC requirement for Type Acceptance of any commercially
: sold Amateur Radio equipment. Period. Not even for amplifiers.
: (That'll raise some eyebrows!)
:
: Here's the deal --
:
: External RF Amplifiers -- These must be *certified* (key word =
: certified) in accordance with Part 97 (97.315 and 97.317).
: This was largely written to shut down mfrs of 11-meter capable
: amps. It is NOT type acceptance.
:
: Everything else -- most other amateur rigs get caught up in other
: non-Part-97 *certification* requirements related to Part 15
: emissions due to internal processors, non-reception of cellular
: phone frequencies, etc., etc. A lot of other equipment is
: subject to similar certification -- your PC, your radio/alarm-clock,
: your walkman, and your wifes microwave oven. Again, none of these
: have anything to do with type acceptance.
:
: Type acceptance is a wholenudder animal, and no amateur radio
: equipment is subject to type acceptance.
:
: CB equipment is subject to type acceptance (in addition to Part
: 15 certification).
: GMRS equipment is subject to type acceptance (in addition to Part
: 15 certification).
: FRS equipment is subject to type acceptance (in addition to Part
: 15 certification).
:
: Amateur radio is NOT subject to type acceptance.

The FCC still approves all commercially made Ham transceivers
before they are offered for sale.
```

: >that need a good spanking.
:
:
:
: 1 the bands are not yours. it is allocated to you by the itu.
: they giveth and they taketh away.
:
That goes for all of us, in every service. If we do not clean
up the mess that Americans have made of both CB and
ham bands, there will be no public hobby services.

: 2 you are nobody. you have no powers and no rights to clean up anything
except
: whats yours. and nothing is yours except the equipment you use, not the
freqs
: you use it on.
:
The FCC has authorized the ARRL to assist in enforcement.
Therefore we have "OOs". And these radio frequencies belong
to the American people, therefore it is the responsibility of all
Americans to turn in law breakers.

: 3 i bet you would love to give all those truckers using amps a
:wipping. sounds like thats right up your alley.

What will happen is that there will be more operations that
trap CBers using illegal equipment. Watch for those truckers
to lose their 18 wheelers to the federal government.
The FCC will give them a real good spanking.

I've not heard anything that would lead me to think that the Liberty Net thinks
it "owns
3950", or that it engages in jamming and harassment.

On the other hand, I HAVE heard behavior
from WA9KJI, K5BLB, and .. even YOU,
Tim, that can be classified as jamming and harassment against the Liberty Net.

I have personally witnessed 7 YEARS of
almost constant jamming, harassment,
extremely filthy language, music tapes,
noise tapes, and countless violations of the law from K5BLB and WA9KJI.

It's time to knock off the bullshit, Tim, and
realize that you are defending a couple of
radio criminals who should have had their licenses revoked and equipment
confiscated years ago.

As the Evansville cretin says, "Get it straight".

Mr. 137 <ac137@iwvisp.com> wrote in message
news:s04t6vq5h1s35@corp.supernews.com...
: You mean to tell me that if I'm running an amplifier on 11 meter, I'm
gonna
: be a bank robber in the near future?
:
: Let me tell you all something here. Crimes are committed in one form or
: another. Hi-visible or not. It is up to Law Enforcers to sort out if
there
: is a need for enforcement. Highway serial killers or Jaywalkers. Either
: way it is a crime. People can bitch, scratch, moan but the problems will
: not go away. Would you turn in a Jaywalker to a traffic cop and turn a
: blind eye to speeders, Identify your next door neighbor as a serial killer
: or turn your kid in to the schools Principle as a Truant? This whole
: argument over amplifiers on CB radio is downright idiotic.
:
: I'll tell you why it is idiotic. Tech Plus ticket holders earned there
: right to use 2KW on CW by passing a pool questioned set of tests and
passed
: a 13 wpm Morse Code test. What for? A mere 2 kilowatts. Wow! Don't get
: me wrong. Those tests are quite hard. But for 2 KW? Come on. Maybe in
: the upper frequencies, 2KW is the minimum to aquire long distant QSL's.
But
: when you have an open set of frequencies existing on the 11 meter bandwith
: where no HAM transmitted and was a bandwidth no HAM were interested in
: transmitting on, the Federal Gov't said the heck with it. Lets give it to
: the people. And don't tell me that every HAM is a law obiding citizen,
: because when the 23 frequency bandwith was a Citizens Band set-aside,
CBers
: wanted more. Just like HAMs. Talk further. Just like HAMs. And they
: didn't even need to take a simple test. As a matter of fact, all you had
to
: do back then is just register for a CB Call-sign. What a concept. Now
that
: the HAMs and the Federal Communications Commision had created a monster in
: their own image, they want to destroy it. Idiotic.
:
: CBers will never stop. For every one CBer busted, five will take his
place.
: For every one manufacturer put out of business, two will take its place.
: Its big business. Its not criminal. There are only a handful of Licensed
: HAM operators in this world. But there is a truck load that won't get
their

: license and DX on 11 meter.
:
: Just speaking the truth.

Then we have a rebellion on our hands. And maybe a government
crack down. Either we are self disciplined or slaves. Freedom
depends on our self discipline.

Yep. The first run of every ad in the ham mags on the
latest rig from Yacomwood will carry fine print saying "This
transceiver is not yet for sale pending final approval of
the FCC" or words to that effect.

If it is homebuilt no such rule applies.

Again, because we have the best Congre$$ money can buy. There used to be strict limits on ownership. This all changed when the Telecommunications Act of 1996 was passed. Just last week, the largest radio group in the country bought the second-largest group. Result: one company will now own in excess of 900 radio stations. Is this a good thing? I think not.

Sorry Stan. You are wrong. Type acceptance
is a very specific set of design requirements and
standards which have been set in place by FCC
regulation for radios used in certain services. No
such "type acceptance" criteria exists for any
amateur radio equipment.

Cheers,
Bill K2UNK

NJMedMan <njmedman@aol.comnoemail> wrote in Rec.Radio.CB...
: Who gets hurt when someone sells an amp for use on the 11 meter band? No
: one.

And no one is "hurt" when a pipe bomb or a kilo of heroin is sold. It's the actual USE that hurts.

Any ham who's operated the 10 or 12 meter or even 6 meter band within a few miles of a CBer using illegal equipment has probably been hurt by the interference. Many CBers have bizarre standards for "good audio"; such audio in any other radio service would be regarded as vastly overmodulated and distorted. To achieve such audio, many CBers remove audio limiters and crank up amplifed mics to the maximum.

Once such a dirty, possibly spur-ridden signal is put into a crappy, non-type-accepted amplifier, the end product can be downright scary, with a wide range of splatter and even stronger spurs. One local freebanding CBer actually used to "kerchunk" a 6 meter ham repeater with his spurs. I've personally experienced bootleg 11 meter splatter on 50 mHz.

Many CB amps are Class C, which I believe (correct me if I'm wrong) is intended for either FM or CW. Using such an amp for AM or SSB causes a wide range of splatter.

I've known no hams to use CB amps on 10 meters. Once 10 is open, the many compact 25 watt mobile rig are usually adequate "barefoot".

yes dumb laws exist. Ignoring dumb laws don't make them go away. It is one step towards complacency. If one can justify a law as dumb and ignore it, then one can reason that any law is stupid and can be ignored. Thus breeds comtempt for all rule of law. It starts with the simplest of laws. While no one is 100% compliant with 100% of the laws, yours truly included, one should respect the laws. If caught own up to the mistake. The lthaught of " it ain't illegal until you get caught" has filled the minds of many in this society today.

thats my thought

That is already happening here in Australia. We have lost access to the bottom 13 MHz of 70cm for the "Olympic Radio Network" which is a trunking system.

There is another band at 433-434 approximately, for 20mW devices including Family Radio type HT's. These interfere with our FM repeater inputs.

Allocations within the bottom of 70cm have been made to commercial portable repeaters, the film crew for Mission Impossible II has 4 of them.

100MHz of 13cm went to Pay tv.

All to the highest bidder.

Summary: Buy Sell SWAP Ham Radio Electronics Computers 9AM - 2PM

This coming Sunday ... The Seasons LAST....

*** !!!! In our Traditional GARAGE and lot !!!! ****
so come rain or shine or super heat the Flea is on !!!

********* $1 buyers discount with hardcopy of this notice ********

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS - HAM RADIO

FLEA all SUMMER at MIT
Sunday, October 17th 1999
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 600 sellers and
free, off-street parking for >2000 cars!

Buyers admission is $4 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $10.00-each at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

*** Attention Sellers ***
Prepaid vendors.. Season Pass or monthly,
will be admitted FIRST.
Separate lines will form prior to gate opening
for prepaid and nonprepaid vendors

!! RAIN or SHINE !! Have no fear of rain, a covered
well illuminated tailgate area is available for all
sellers (6'8" clearance).

Talk-in: 146.52 and W1XM/R-449.725/444.725 (PL 114.8/2A).

Sponsors: MIT Electronics Research Society
MIT UHF Repeater Association (W1XM)
MIT Radio Society (W1MX)
Harvard Wireless Club (W1AF)

For more info / advanced reservations 617 253 3776

MaryW4ME <maryw4me@aol.com> wrote ...
: In a post on the type acceptance of amateur radios in the U. S. there was
a
: reference to an "FCC Number." The FCC number IS the type acceptance
number of
: that radio. All you have to do is call the FCC and feed them the number
off
: the radio ID plate and the FCC will tell you what radio you have and when
the
: original type exceptance was issued. I am a retired commercial radio
service
: technician. I have dealt with the type acceptance for over 25 years
making
: sure that the customers radios are legal from the standpoint of type
: acceptance. A good example is the Motorola Motrac/Motran, GE Mastr Pro,
and
: the GE Prog Line. They are all over 25 years old and the type acceptance
has
: been pulled by the FCC. Per the Communications Act of 1934 from which the
FCC
: Rules and Regs derive MANDATES type acceptance and licensing of all
: transmitters in the U. S. I made mention of the FCC ID number on the
radio
: model or id plate. The type number is there by law. Amps for 6 and 10
meters
: can be built with the approval of the FCC..... They too get an FCC number.
: Marilyn Hartley W4ME.

The guys might be right. Our equipment may only be
type approved rather than type accepted. It is based
on our technical expertise compaired to other services.

Ed, as you are with the ARRL, you do have a certain expertise
that we respect.

: >>The FCC still approves all commercially made Ham transceivers
: >>before they are offered for sale.
:
: Not really; If memory serves, HF amps and equipment that contains scanning
: receivers is subject to Certification. Under Certification, the
manufacturer
: sends information and test results about the equipment to the FCC and they
: issue an FCC ID # from there.
:
: Other ham gear is subject only to the requirements of Part 97, with no FCC
: involvement at all.
:
: 73,
: Ed Hare, W1RFI

Is it certification or approval? And why does it take
so long for a new piece of equipment to get said
approval before it can be sold?

Check out www.arrl.org. The study manuals are not expensive at all. Radio Shack also has study materials.

There are on-line written test examples at www.qrz.com

The exams are now given by "Volunteer Examiners" - and the dates are on the ARRL website.

> It is still a fact.

No, that is NOT "type Acceptance", that is "Part 15 compliance". You are still confusing 2 sets of completely different requirements.

Part 15 compliance among other things, makes sure that an electronic device does not emit an out of band signal strong enough to interfere with users of other services, as well as sets standards for spectral purity.

Type acceptance is an ADDITIONAL set of requirements that are specific to the radio service that the equipment is to be used on. In the case of CB radio, things like 40 channels, modulation control, power output etc. This is specific to the CB service. In order to be type accepted for CB, you can't, for example, have a radio with VFO frequency control, it has to be channelized and PLL controlled.

None of this applies to the Amatuer radio service. Hams are allowed to use VFO's because the HAM is responsible to know where the band edges are. The ham is allowed to adjust his power because he is supposed to know the limits and is responsible enough to adhere to the rules.

It is this technical competance, that allows the ARS to not require type accepted equipment.

If some bonehead on channel 19 is running a couple hundred DIRTY splatterbox watts and they are a mile or two from my QTH, I hear their bleedover across all 40 channels. Comprende? Dirty radios that can be heard across the 11 meter band affect EVERY operator who is trying to work a weak DX station on SSB, or AM for that matter. I'm not really concerned about the legal aspects of CB'ers using illegal amps, but it really pisses me off when some dork with a cheap splatterbox wipes out the weak DX station I'm trying to hear.

I feel I *must* step in here. In my books, an SWL is every bit as much a ham as someone with a license that says they can transmit, and that is the traditional view too - not some modern-day liberal definition.

The traditional view has always been that a ham is someone who holds an amateur radio operators license. I have never heard of an swl'er being referred to as a ham. And that is not ment to put the swl'er down in any way.

You're above their level of comprehension here. The typical CBer response is "well, I don't go into the ham channels, so what do they care?" These people don't know (or care) enough about radio to realize that their typical truck stop splatterbox bleeds all over 10 and throws spurs into the other bands. THIS is why hams have a problem with it.

Agreed. However, some CB'ers DO realize that their rigs throw spurs into 10 meters and other amateur bands, and their response is that I should "get a radio with better adjacent channel rejection." Pardon me? I use top notch equipment in my shack, but not even a $2,000.00 rig will be able to reject all the harmonics emitted from a cheaply made 11 meter radio hooked to an equally cheap megawatt splatterbox.

Well sorry to say, but you are being way to
general. I'm lucky if once a year I go above
27.405 or below 26.965. So your statement that
"I'm fair game" is Bullshit!!! I had my "Ticket"
once and I'll tell you, it practically was the
same as listening to channel 17 around here.
That's why I said you should enforce yourselves
before you come down to whine on the 11 meter band.

Oh by the..... Small minds, breeds narrow views.....

Hello all,

I have Hewlett Packard 8410C/8412B/8411A opt. 018 Vector Network Analyzer systems for sale. These are late model, in excellent condition and are functionally checked and appear to be in calibration. There are no cables or accessories but I will include part of the operating section of the 8410B manual.

I have already sold several of these and could provide references to the condition of these units from happy customers.

I am asking $650 plus shipping which is about 1/10 of what Tucker sells them for. They are tested so it is not like buying at a flea market; you don't get a current calibration sticker though.

I also have some older 8410B/8412A/8411A which would be less expensive. I also have some that have cosmetic damage but are working and I would take less for one of these. Tell me what your are interested in.

If you get back to me quickly with a verbal commitment I can throw in a 8750A storage normalizer
tested but no interface cable.

Thanks for reading this.

I haven't found any solid leads on the whereabouts of W9TO. If you
have something *solid*, I'd like to know. My dad recently passed away and
had Jim's old e-mail address in his address book. They shared a common
interest (keyer design) and I'd like to talk about those days.
I could just start calling all the listed Ricks', but hope to avoid it.

Please don't suggest the obvious (QRZ, switchboard, etc.). Other posters
also said that "a few years ago" he was on the low end of 40 during the
day. I also asked the ARRL region manager and he said he sees Jim at
Dayton and would see if he can get something, but he said it would "take
some time". There may not be much.

Regards, Steve K9DCI@arrl.net

734. Utility: HAM vs FRS vs CB -opinions please

Newsgroup: rec.radio.amateur.misc
Date: 1999-10-13 00:00:00 UTC
From: brent@NOSPAMscrc.umanitoba.ca
Message-ID: <3804a89c.1103598399@news.cc.umanitoba.ca>
Source record: 129732

Hi there,

I'd appreciate it if some of you "radio heads" would give me your opinion. I've trying to figure out the best way to improve my communication capability. First let me outline the problem...

1) we have a cabin that is outside cell phone coverage
2) from the previous owner, the cabin has an 80 ft tower with about a 3m vertical antenna (with 4 horizontal 'ground' (?) masts, also about 3m)
-I think it is a CB base antenna rather than a HAM vertical

I would like to be do the following;

-to be able to call the cabin for assistance should I get stuck trying to drive to it in the winter (the road is especially bad for the last 3 or so miles). Usually there is someone else there already.

-to have 2 way communication with the cabin during hunting & fishing (within a 5 or 6 mile radius would be nice)

-to have 2 way portable communication (e.g. snowmobile to snowmobile in the winter) (a mile would be adequate)

It seems like the easiest thing to do would be to have a CB base station at the cabin, and CB radio in car, and CB handhelds for snowmobile to snowmobile (or boat to boat) communication. What type of range should I expect to get with a mobile CB or from a handheld to a base station? An advantage to this is that CB's are cheap and we already have a couple old ones kicking around.

An alternative is for me to get my HAM license and maybe a 2m HT for use in the car or other mobile use, of course it would necessitate getting another rig for the cabin. The range and clarity might be better with 2m or 70 cm equipment (?), but the disadvantage is that unless I could convince some other family member to also get licensed (unlikely) that it would only be one way communication. Also, for snowmobile to snowmobile communication, the FRS type FM radios might be fine (and remove the need to convince someone else to get a license), but can one transmit to and receive from them with a HAM HT? How would the range of FRS type radios compare with Handheld CB's? Can one get a HAM HT that transmits and receives CB frequencies?

One advantage to going the HAM way, it that in other situations a 2m is likely more useful than a CB (e.g. autopatch)... but I already have a cell phone, so if I'm dying to chat with wifey, autopatch is not a big advantage.

What do you think? I'm especially interested to see if you can convince me that getting a HAM license is the way to go. I do have some interest in radio, but I don't really have lots of time to invest in a new hobby right now. For a few weeks I had thought that HAM was probably better (i.e. better quality communication, not "toy" like my perception of CB), but after going out there again this weekend, I'm more convinced that using CB's makes more sense... at least then the whole famn damily could use 'em. We've already got a couple of old unused CB's kicking around the family (from vehicles and days gone by), so I will get them installed to see what kind of range I get.... But that doesn't mean that I can't also get my HAM ticket.

Your $.02 is appreciated.

Brent

And for most things it would probably serve quite adequately. I have two reservations: First, how old is the old antenna? If it looks like it's more than a year or two old, you may want to check all the connectors and the condition of the antenna and coax. If you're looking at a hundred feet of RB58, for example, you'll probably want to replace it with something that has a lower loss. Above all, remember that antenna installations will deteriorate, particularly if they weren't installed all that well to begin with.

So if you go with CB radio because that's what's already on the tower, remember that you should still check the antenna system (don't just take an SWR reading, examine the cable and check the cable and connectors).

Second, from your e-mail address and the description of your surroundings, it sounds like you're describing the Canadian Rockies. My concern is where the cabin is and how much mountain, hill, or even forest is between you and the other end. This will have a substantial affect on your range, particularly if your house is in a valley. If that three mile range from mobile to cabin is that critical, you may want to consider using ham gear instead. Keep in mind, however, for anything much less than line of sight communications, VHF at 100 watts is often no better than a sideband CB in rural mountainous areas.

In most cases a CB ought to do just fine, particularly because you are in a remote area. You tend to hear fewer idiots on the air in rural areas because they actually use these radios out there.

>An alternative is for me to get my HAM license and maybe a 2m HT for >use in the car or other mobile use, of course it would necessitate >getting another rig for the cabin. Can >one get a HAM HT that transmits and receives CB frequencies?

FRS radios are useful for half a mile to a mile of communications in the forest as long as you're pretty much within sight of each other. Beyond that, I wouldn't expect much. The advantage is that they're small, light weight, and more durable than most portable CB radios.

Ham radio will offer you a way to communicate for longer distances, but it isn't fool-proof, nor is it as easy to use as a CB. Furthermore, the installations you'd need for a good mobile HF setup are not simple.

I'd go with the CB gear in your application.

I tested for, and passed my Technician class license on September 25th. As of today, I STILL haven't gotten my designated call-sign!

I was told to check the database at QRZ, and within "a few days" my calls would appear. This hasn't happened. It's been 23 days.

Is this a normal delay? If it is, why did the experienced VEs that administered the test indicate a much shorter notification time?

I contacted QRZ to ask about the delays (some weeks have had only 3 updates!), and was told it had to do with problems encountered in the switch to the ULS system at the FCC.

I have resigned myself to the fact that I will most likely receive my license by mail rather than via the internet. How long might THAT take? From my experience, I'd advise new applicants not to expect their authorization to transmit in anywhere near a timely fashion.

Good point.. I know it is at least 10 years old... Probably more like
20. It has had the connector cut off the coax on the bottom end.
Something I have yet to fix. I don't know the type, but it is the
heaviest coax that I've seen, about 2x the diameter of the coax of a
mobile antenna. One thing is that I know it has been struck by
lightning, so I guess that it's conceivable that it's been fried. (If
it is possible to damage an antenna by lightning strike ??) It has 2
circles on the tip (that are about 8" in diameter and 90 degrees to
each other), at least they haven't been melted off or anything like
that. The installation itself seems solid, but I haven't been up to
the top to look at all connections.

Thanks for the comments Jake... Actually I am in Winnipeg Manitoba,
and the cabin is in the southeast corner of the province near Lake of
the Woods (something like 20 miles north of Warroad Minnesota as crow
flies). The terrain is wooded, but you can't get any flatter.
Considering the terrain, the tower and antenna have a lot of height
(way higher than any others I've seen around). I'd guess the tower is

about 85' plus antenna.

>In most cases a CB ought to do just fine, particularly because you are
>in a remote area. You tend to hear fewer idiots on the air in rural

>

Actually I have turned on a mobile CB out there before, what struck me was how much skip chatter there was. One concern I have is that if I'm trying to communicate to the cabin with a mobile in trees or with a handheld, that the signal will get lost in all the skip/noise. I just haven't had a chance to actually get a CB attached to the tower yet and find out whether the range for receiving a mobile is decent.

Thanks again for your thoughts,

Brent

Of course, in a real emergency, any form of radio on any band without a license is acceptable to the FCC.

It all depends on your desired level of preparedness.

Exactly! The marine radio service requires type accepted equipment that
adheres to the technical requirements of Part 83.

The same would be found in the aviation, land mobile, FRS, GMRS,
citizens Band, and other commerical services. But NOT Amateur Radio.

You will never see a tag on a ham radio that says "Type accepted for
technical requirements of Part 97"

You WILL see a tag that says "FCC approved" or "Complies with FCC Part
15" or something similar.

<snip>

I took my exam on the 26th and my call just showed up yesterday. If you search licensee/state on the fcc website (www.fcc.gov then follow the links), your call sign might already be up (as mine is). QRZ is slow, I will grant you that. And, when searching for my callsign under the callsign database, I'm still seeing the "Error -- No match found in database" page pop up. My advice would be to give it a few more days. Congratulations on earning your Technician's license, and good luck on seeing your call sign up in the next few days.

The reason for this is many Hams are mad that the FCC is targeting the Amatuer Band and not the cb band so they cry about the amps and freebanders etc, when in reality many hams are CBers in hiding and are also contributing to the mess.

Hi,

I'd consider GMRS. It would allow use of a base station and HT's/Mobiles.
The radios are basic commercial UHF rigs. You have a higher power
allowance than FRS (500 mw with fixed antenna), are allowed big antennas
and even repeaters. It shares the splinter frequncies with FRS users
also.
Landline interconnect is not legal though. More information can be found
at the following URL's:

FCC Info:
http://www.fcc.gov/wtb/prs/genmbl.html

FRS / GMRS / HAM Info:
www.dougweb.com/gmrs.html

Personal Radio Steering Group:
www.provide.net/~prsg/

I've used GMRS in the past with great results. Now that the commercial
users of GMRS are being forced to change frequencies to business band
frequencies upon license renewal it will finally go back to what it was
intended, a Family/Personal communications service.

Doc,
What parallel can you draw between Jews, Blacks Lationos? JEW IS NOT AN ETHNICITY! You could say Semite, but then you would have to include palastinians with that group also.

As far as I know a person can say what they want about another's religion without invading their rights. If I say that all Catholics are Guilt ridden drunks with homosexual clergy, they try to run the government and they should al be sent back to Rome, well I don't know many Catholics who would get so worked up about it that they would start playing the race card, even though they used to be fed to the lions and used for bloodsport too. Its apples and oranges my friend. EVERYONE has a CHOICE as to what religion they follow. NO ONE has the CHOICE of what ethnicity they are.

KK7HO spun:

> It"s amazing how the libnet gang members complain and whine about this language
> and that language.
> Then turn right around and post the SAME stuff that they have been bitching
> about. HYPOCRITES. This is only the latest crap from a libnet member. Two of
> them to be precise.
> This really shows their lack of integrity AND intelligence. LOL

Look who is complaining about Hypocrisy! Besides Bill Clinton,
I can't think of anyone else that would attempt such brazen lying!

Remember that this guy, KK7HO AKA Tim Volz of Las Vegas
is the one that openly discussed the contract killing of another
amateur radio operator on the air. The recording is listed below.

Volz is an active jammer of 3.950. He gets on frequency, and
chants over and over again, "Nit Wit Net". You can hear Volz's
jamming on one of the URLs listed below.

In another incident, Volz explained that his daughter did the mass
emailing of a pornographic message to Liberty Net members.
Many doubt Volz's story about his daughter, but beleive that it
was Volz himself. Attempting to shift the blame for this outrageous
action to his daughter, illustrates the character of KK7HO. The
email was about homosexuality and was intended to shock the
Liberty Net members.

Please stop the jamming and spamming KK7HO.

Hear KK7HO discussing a contract Killing at:

True,
I indicated that I am not a "ham". However, this does not mean
tat i am not a "federally licensed radio operator" of some kind.

However, the current setup I have at home is strictly SWL in nature
(no transmitting gear of any kind). Also, you want to tear me a
new orifice? Good luck, pal. You can't tear your way out of a wet paper
bag! :)

One doesn't have to see a wattmeter. If you have sefficiently accurate
equipment,
or good knowledge of RF principals, then determining the amount of RF with
a given type of antenna is not hard. Now, the person in question lives roughly

4 blocks north of me (about 700 feet). He has spectrum splatter that
propogates
upward throguh the VHF spectrum on chan 2, chan 5, and I have heard him
on harmonics as far up as 162 MHz from that distance.

Now, according to the RF interference handbook, the stronger and RF
source is, the higher up the rf spectrum you can hear its harmonics.. I'd
say that from near 1/4 mile away, 5ht and 6th harmonics are quite substantial
to make an "educated guess" as to power level/ Also, the person in question
has
made it clear he was "running 5 gallons" from his home (the term gallon
referring to a KILOWATT measurement).

Also, on this point, I have had some discussions with a few local hams on this
matter.
they can clearly hear his spectrum splatter on the 10 meter and 6 meter bands
from
more than 5 miles away (also suggesting the presence of a powerful AND dirty
transmitting source).

SOME (RFenforcer, RHOOLIGAN2, etc. did you see what I said?) Ham's will never have this mentality.

Anyway, just my input. Im going to listen to my country music, crank on the ole tube amplifier to later use it on CB bands illegally, have sex with my sister then have me a homemade beer. Take care.

Just curious. Have you served your country? Do you vote every single election year? Do you even vote for your Mayor, etc, etc? Im sure you probably answered yes to all of them. My question is. Do you want this to remain the "free" America, or would you like it to be run under dictatorship? Where everyday the president gives a Presidential Order of some sort, or some silly law is passed.

Im sure you have been asked if you ever J-walked or speeded on a highway (even by one mile that is, since, "little violations of the laws leads to disrespect of law in general").

Well Al since few ham stores offer this I'd suggest looking in the phone book for a reputable audio dealer, anyone selling high powered audio amps would have experience of going directly to the battery. You might also post the details of the vehicle you own, you might be surpized many already have a plastic plug in the firewall for running power lines etc. It might be easier than you think.

So, what does this program supply that isn't already part of just about every word processor (let alone page layout programs) that's in existance today?

Granted, MS Word is a pain to do some things in, but it usually can be done.

That's what I used to do the W4CRC QSL cards..scanned in the pictures of the equipment and tower site, and then K0SVX, K7MLE and I probably spent an hour moving stuff around until we got something we liked. Print 'em 4 up on a color printer with pre-perf postcard stock.

Brent, as much as I would like to see you get into Ham radio, CB may
be the best choice in your case. It would give you the range you seek,
all family members could use it (without license), and it is relatively inexpensive.

However, I have serious doubts about the existing antenna. If its
been up for a while, I would recommend that you take it down, clean it
completely, replace all hardware (screws, bolts, etc), replace coax, and
test it carefully before use. An easier alternative may be to replace
the antenna completely.

In the future, you may want to consider ham radio to add capabilities
- longer range, etc.

They have similar ordinanes over in Glendale Arizona. The local police
got real tired of all the calls being directed at them because of a few
folks running extreme power and disturbing the neighbors peace.
In fact, one elderly gentleman sued the offending party for
interfering with his pace maker (this is actually what propted
the glendale city council to pass an ordinance allowing local
law enforcement to handle "low priority" federal problems).

JCM, since you're responding to a post in r.r.cb, I assume you're
refering a CBer's shack. Hence:

Title 47 - Telecommunication
Chapter I - Federal Communications Commission
Part 95 - Personal Radio Services
Subpart D - Rules for CB Service
Revised as of October 1, 1996

Rule 26 - FCC Inspections
{A} If an authorized FCC representative requests to inspect your CB station,
you must make your CB station and records
available for inspection.
{B} A CB station includes all of the radio equipment you use.

another thing is i can not believe the van pulled up with out knowing what place
the signal was coming from if they was just checking around then i might believe
it. that is probably why they asked if they could look inside
if they had actually tracked the signal down to the vehicle then
they would have asked to see the transmitting station because they
would have already known that there was a transmitter in the vehicle
then you would have ben hit with a NAL for refusing to let them
inspect the station
>

>could have gone to a federal district judge and asked for
>a warrant to search.
they do not need a search warrant to see the station
they can,t force there way in because it has nothing to
do with a law
the spectrum is a public resource and the fcc has control
over the users of it
if you use it you must follow the rules
one of the rules is if you use it you must make the

station available for inspection
if you brake the rule you can and will be subject to fine
that is associated with the rule
the fine is a insensitive to you to let them see the station
once again
they can not forcefully enter you property but they can give
you the incentive to let them in
if you continue to be a butt and continue splattering all over the place
then they can get a warrant to shut you down but only as last resort
a rules of part 95 is like a contract if you brake the contract
you will be subject to the fines stated by the contract
just this contract is what you agree to when you use a cb

That is most correct, which has been my point for a long time. Reasonable search and seizure, that is what we are talking about. Hide the damn stuff and refuse them the ability to search and I think you will do well. I know that I am going to jail , before I acquiece to a search of my long nosed suburban, ...icm out ....

I have many questions about that dental practice of DR Hate. Why would
a person practice for just a few years and quit? What was behind the
termination of his practice? there are many questions he should answer
for the members of this forum. He accuses Herb, but it seems he has a
lot to explain about his past.. Keep after him RF, maybe he will come
clean and spill his low down guts.

I have not recieved an SWL card in 15 years or so, I always replied to them, especially when they were from the Soviet Union as I understood you needed 10 confirmed SWL reports to get a Novice equivallent licence there. I have a stack of them here from SWL's.

Herb's Wife, Monika, never testified nor was it adduced that she stole anything.

However, when Herb was first notified of the bust, it was nightime and outside a hotel. The confronting agent surprised him, neglecting to inform him of his Miranda rights. According to testimony, a shaken Herb blurted out that he didn't want Monika involved.

Doc, to jump from Herb's initial outburst while he was unaware of the gravity of the charges ahead and without his Miranda rights to his Wife and theft is an unjust leap into rumor and innuendo.

Such an issue was never developed in the trial. Nor were the botched Miranda rights, where I believe Herb's side had a perfect right to exclude from evidence all of his statements at that time.

Though these issues are procedural, they have no less importance to justice than the material issue. That is, unless we want to trade them in for tyranny.

> Hello folks
> I recently got into amateur radio.

Nahhh you've been licensed for some time. It shows. Nice try though.

> From what I can
> see it was a big mistake.

Yes, please turn in your ticket. If your too stupid to look at what you can do with ham radio then you'll have difficulty ever building anything and really enjoying the hobby.

> My wife makes fun of me now all the time. She said she
> is embarrased by the whole scene.

Your wife sounds like a real bitch, mine usually makes me breakfast and says have a good time as I leave for the local Sunday hamfest. Perhaps your problem isn't the habits of ham radio operators but your bitchy wife.

> She kids me that she is going
> to get me a hat with my call letters on it for my birthday and
> buy me a pack of camels.She also wants to know when I am going
> to have my call letters put on my back windshield.

Wow your wife sure seems to know a lot about what hams do, especially since your just recently licensed. What other aspects of you life does you wife control?

> Any suggestioins
> Is this what amateur radio is all about.

No, but your too stupid to figure out what it's really all about, so get out now. You can join the ranks of Masataka Noda, another moron who couldn't figure it out and sold his radio equipment for pennies on the dollar.

> Maybe I need to get my
> upgrade to the hf frequencies where the people have more intelligence.

No no please do not upgrade, we need folks on the HF bands who have an interest in radio and electronics, homebrewing, building and tuning antennas, experimenting with different modes.Your interests seem to be geared more towards physical appearances and habits of some radio operators. This hobby is clearly not for you.

>
> I am going to sell my equipment and get back into motorcycling.

Good idea. Speaking of motorcycling, I was really interested in it and always thought the Harley, while not the best engine design, had a lot of "soul" I was just about to purchase one but I went to a motorcycle swap meet and what a carnival it was, long haired hippy types, drinking beer and getting drunk, girls with tattoos all over their bodies, many guys had missing teeth, poorly groomed beards. Some guys had leather jackets that had not been cleaned in years, some had their club logo's on their clothing and smoked Camel cigarettes. My wife was always making fun of my wallet with the chain attached to it and my leather bags with fringe, she said she was embarrassed by the whole scene and kids me that she is going to buy me one of those T-shirts that say "Live to ride, Ride to live". Should I upgrade to a BMW? do those riders have more intelligence? I think I'm going to sell my Kawasaki Katana and spend the money on some new ham radio gear. I've decided to get out of motorcycling because my wife making fun of me and the carnival atmosphere I found at the motorcycle swap meet, all motorcyclist must be just like this so even though I really enjoy riding I'm forced to get out. I think I'll be an idiot troll like you and go post this to all the motorcycle newsgroups that way all the motorcyclists will see the true colors of motorcycle riding and get rid of their bikes like me.

MASATAKA NODA!

Now THERE'S a name I haven't heard in many months around here. Whatever happened to our "yellow" friend? Did he finally flunk out of his Canadian college and go back home to sip sake with mommy and daddy?

Good riddance to bad rubbish.

Does anybody out there have a Service Manual for an IFR 1000 Service Monitor with a serial number lower than 200 or so. I have an original one that I purchased but it is from a unit with a high number and many of the parts are different. Will gladly trade or will purchase the older unit manual. Will also be happy with copies of the different areas.
Please let me know if you can help via E-Mail. Thanks and 73's Don KB6GQA

Sounds like there was enough probable cause to
detain him and get a valid search warrant. All
they'd need is the information you already said
provided a pointer to the van in question, and that
could then be backed up with a simple field
strength meter reading. It doesn't take rocket
science to get suffient proof.

Agree also. Here's a question.

I recieved an email on this topic from an individual that
stated for those services that do have type acceptance, the
FCC will, over time, drop the type acceptance approval
on older equipment? A time period mentioned was 25
years. If that is so, has the FCC then dropped the
Type Acceptance on various older CB equipment (e.g.
my old 23 channel Lafayette Radio CB unit)? If
such is the case, does that mean it would be
illegal to use that 23 channel CB unit today?

> >mobile,

I'm rather doubtful of the existence of such a thing.
I've seen a lot of cb amps, most are vastly over-rated, in the manner of computer speakers labelled "350W" with a 2x2x1 inch wall wart for a power supply.
I've seen "500W" CB linears with 18 gage wire on the 12V power leads.
I suspect 50W is more like it.
I also know that 5W will work the world if the band is open and your station is properly built, and a kW won't get you anything if the band isn't open.

I've never seen a mobile kW for CB, in fact the last HAM mobile kw I saw was a major installation job, requiring major surgery to the charging system, and a lot of gear mounted in a spacious trunk.

I also know that BS is thicker on the CB bands that even the worst usenet groups.

In any case, if he's outputting more than 4W on AM, or running out of band, or using any modulation mode other than AM or SSB (with whatever the limit is there for power) then he is fair game for enforcement, and I will cheerfully help run him down.

The FCC's HF-DF capabilities are quite good these days though, and I suspect it's just a matter of when they make it down the list that far.

Mobile DF, from 100kHz through 2GHz at your service, with GPS, SSTV, and APRS.

> Getback

Depends on your perspective I suppose, I view the current state somewhat differently. I see QRP manufactures by the dozens where 20 years ago you had basically the HW-8/9, I see new digital modes being used, even some old analog ones like Hellschieber being brought back to life, Repeater links that cover several states, clubs like the NorCal group that meet monthy and have no officers or "official" club business, just homebrewers who enjoy talking about radio. Entered a QSO party lately? most record scores are only a couple years old, participation is up each year.

I also see an active FCC who has cancelled dozens of calls by those who have cheated on tests, suspended licenses of those who jam, etc. Does 75m still have problems, sure it does, but it sounds one helluva lot better than it did a year ago and I suspect Mr. Hollingsworth has only scratched the surface there is no doubt in this hams mind that there are plenty more to follow. You can't expect instant gratification for a problem thats grown from years of neglect. Listened to 14.313 lately? Not hardly the "Zoo" that Drew Durrigan had wet dreams over, yea there is still some jamming but it's just a matter of time.

Instead of posting endless requests for the current status of OTK's license or what color underwear he has on today you might try contributing to the hobby, you might be surprized at the change you may bring about. But that will never happen, you seem to feel hamfests should be as they were 50 years ago which seems to be about the time you stopped thinking and since it's not just like YOU want it to be then it must be all wrong.

Bad form getback,

Tim ka8ddz

P.S I heard a rumor that OTK had pancakes and sausage for breakfast with coffee and orange juice. Is that enough info to hold you over untill next week? I may not care for your attitude, but I do want you to sleep well at night.

Why do what?

If you mean why use it now? I do so if a couple of friends
in my car club get together for a drive. We use the CBs
for car-to-car conversation. The 23 channel unit works
fine. I don't need or want a new one.

Cheers,

817. Re: Utility: HAM vs FRS vs CB -opinions please

Newsgroup: rec.radio.amateur.misc
Date: 1999-10-14 00:00:00 UTC
From: TE <ToddMe2@concentric.net>
Message-ID: <38063C46.E57E0554@concentric.net>
Source record: 129619

I too have been researching GMRS as a longer range alternative to FRS or CB. After reading "http://www.fcc.gov/wtb/prs/genmbl.html" I wonder how one would manage a 19 mile range from the "5 to 25 mile" range the FCC mentioned. My requirements would be one mobile and one base station. My daily commute is 19 miles across relatively flat terrain. However, I would not consider it true line of sight. If 25 mile range would only be mountain top to mountain top I am out of luck. Also, I live 2 miles from a municipal airport so tall antenna towers may not be an option. I have not checked the possibility of repeaters on my route yetï¿½

Thanks,

Todd

818. Morse Character for @ (at sign)????

Newsgroup: rec.radio.amateur.misc
Date: 1999-10-14 00:00:00 UTC
From: ac6v <ac6v@ix.netcom.com>
Message-ID: <38064AA2.2048E5F2@ix.netcom.com>
Source record: 129620

Have had several inquiries for the morse code equivalent of the @ sign.
Or
does one just send "at" ? Would be useful in sending E-Mail addresses.

While we are at it -- how about the # % & * characters?

Some less commonly used ones I'm aware of are:
(-*--*
) -*--*-
- -****- (Minus)
" *-**-*
_ **--*- (Underscore)
' *----*
$ ***-**-
= -***-
AND
INTERNATIONAL Extensions
! is -*-*--
:U is **--
`E is **-**
:O is ---* Also for (oe)
:A is *-*- Also for:(ae)
~N is --*--
`A is *--*- Also Danish (a) with ring over it.
CH or Bar-H is ----
]p (thorn) *--** (Overstrike] with p)
-D (eth) **--* (Overstrike D with -)

AND of Course All Contesters know these:
Abbreviated Numbers
1 *-
2 **-
3 *--
4 ***-
5 ***
6 -***
7 --*
8 -**
9 -*
0 -

ANY OTHERS??

The issue seems to be, does the FCC Field Inspector have a right to inspect
your station, against your will. The answer is, no he doesn't, on his own.
By the rules, you can lose you license by refusing to allow him to inspect, but he has no power to force an inspection on his own. What he can do, is bring a Federal Marshal with him and the Marshal DOES have arrest and search powers, and can if there is Probable Cause, enter and do a search for such stuff. On a Vessel the Coast Guard provides the enforcement arm for the FCC, and does have the power to board, search, and arrest. Been there, done that!!

Would that sorta be like a ham, spattering too much and therefore loosing his home? ANd no ham ever edged too close to the edge and may have just a tad slipped out of band trying to be the one noticed by a DX station. Felon, give up your home.

Again, read my previously just posted response for details.

In truth, mr. Oyen is, in fact, my brother-in-law. he visits phoenix
these days on twice yearly vacations. He works in Kansas and lives
THERE. if you have a problem with the fact that he used my machine for
1 day while staying in town, then you are in need of professional help.

And?
its entirely possible that the message was forged..
In fact, given some of the antic of THIS group 9and rec.radio.scanner),
I wouldn't put it past them..

Also, a careful check of those headers would be in order.

Frankly, I don't know what you are on about...

May 1999, huh? yeah. He was in the phoenix area and yeah,
I gave him remote access to my machine for the purposes of
sending e-mail (this isn't hard with a shel laccount on a UNIX OS).

Also, if you care to note, that appears to be THE only article that specifically
mentions a name. Besides, he happens to be my brother-in-law, and he is
a ham radio operator.

lastly, I resent your insinuations. Mr. Oyen was in town for a period
of 2 weeks staying with the family. He is back at home in kansas
working for the rainbow telcom services of Atchison, kansas

So, your so-caled proof is nothing more than 1 posting made by a relative
on my box on 1 day. Thats a bit skimpy, now isn't it?

Care to try again, dude?

Better get some more toys... better yet, better get a life.
.

Ahh, you see, you have crystallized the situation eloquently. Neither I nor just about anyone else in this ng besides you live in Los Angeles, or even the surrounding environs.

Speaking for myself, the instrument has yet to be devised that can measure my indifference to the party in question.

I do find it amusing that you expend so much resource (connect time, bandwidth, energy, etc.) to announce your feelings about this person in a forum that has practically zero potential of reaching a concerned audience.

Finally, it strikes me as misleading to label your posts as "updates" when they contain precisely the same information each time. If you have some new information, then an update could arguably be in order. Except for the lack-of-interest part.

On the contrary, we've been asking the FCC to get active in enforcement again for many, many years. It's the hams themselves who've been providing much of the evidence against the lawbreakers in our bands. Believe me, we're not mad, we're ecstatic!

>when in reality many hams are CBers in hiding and are also contributing
>to the mess.

We don't call them "hams"; rather, they're CBers who happen to have an amateur license. Very big distinction between the two.

I wonder if Avery sells a postcard sheet. If they do, it
probably comes with all the formating info needed to
generate anything you want using their postcard
sheets (assuming such may be available).

They didn't see any radio equipment, only an antenna. An antenna is NOT
evidence that radio gear is present. Now, if they had signal strength
readings from the vehicle - then they would have evidence. They would
then have the right to ask to inspect the equipment.

I don't believe there are 300k licensees intentionally breaking laws.
We have over 600 kilohams; even if say, 0.1%, or 600, fell into the
riff-raff catagory, the bands would be unusable for the rest of us.
But even with that gross over-estimate, one-tenth percent is just one
ham out of each thousand; not bad.

Hello,

Check out http://hfradio.org - a site with many resources for Shortwave Radio and Utility Listeners, Ham Radio Hobbiests, and others who might be interested in this type of content.

So, come on by and check out my non-commercial SWLing/Ham Radio website. The URL is http://hfradio.org and features DX information, including QSL Route/Manager Lookups and Callbook Lookups; a Propagation Center including my eAlert service (allows you to sign up with your email address. Then the eAlert system will send you email propagation reports. I use this with my pager.); Equidistant Azimuth Map software (allows you to create maps of any QTH); Swap and Shop; Bookstore (I've hand-picked over a thousand book titles on radio, etc.); Free website space for YOU to create your own Ham or SWL site, and there's more. Easy to navigate. Open for suggestions.

If you feel up to it, after looking around the site, drop me a note (you'll find my address on the site) and share your thoughts.

73!

Hi all;

Once in a very rare while I sell off equipment that just isn't being used. If you knew me, you'd know that EVERYTHING I own is absolutely functional, clean, and kept in a non-smoking, humidity controlled environment.

Here's the list, get it while you can...

Timewave DSP-59+ digital signal processor, with version 3.0 firmware. Like new, no marks, amazing abilities. Includes manual and wall wort power suppy (normally an extra cost item): $145. Really pulls them out of the "mud"; great for voice, CW and DATA..

TR-44 rotator with control box, mast mount and manual. The rotor is just back from the Rotor Doctor, it's been fully refurbed, lubed, cleaned, repainted and checked out; it looks new. $115 or BRO.

Heath SB614 Station Monitor, clean, fully operational, well built, looks and works virtually like new. This is a sweet monitor, with a nice bright trace, and plenty of controls. A steal at $145, includes good copy of manual.

Heath SA 2060 Legal Limit Antenna Tuner. This is Heath's "top-of-the-line" tuner, and one look inside will tell you why. Well built, like new, no scratches, works perfectly. Dual-meters, easy to adjust, supports coax, ladder-line, and end-fed antennas. Includes manual. $195 or BRO.

All of the equipment is guaranteed to be as described, you have my word of honor. I prefer postal Money Orders or Certified or Bank Checks, I ship same day via UPS. I'll split the shipping with you.

Thanks, and I look forward to hearing from you!

Hi Tim -- thanks for the reply -- I think the answer is there is no assigned character. Several shipboard operators of 20+ years experience never heard of a @ morse character either.

Thanks Tim,

The vehicles a 97 Dodge Avenger. I've looked at the firewall from both the inside and the outside of the car and was unable to find a place to route the cables. The cars wire harness appears to come through on the passenger side, but it is pretty full and there does not appear to be room for any more wires.

I suppose the other, similar messages are also "forged" too, right?

>Also, a careful check of those headers would be in order.
>Frankly, I don't know what you are on about...

This is about exposing someone who enjoys making personal insults in a public newsgroup and then trying to hide his identity, Mr. Oyen. Personally, I don't know you from Adam. I could care less about who you are or who you live. But when you get on USENET and start telling people to "shut up", you can expect someone will do a little research on you and your posting history.

I don't like liars, Mr. Oyen. I also dislike those who hurl personal insults and then hide behind a bogus identity. You seem to fit both of the above criteria. Therefore, I have a problem with you. Hence, you have been exposed.

Do you wish to continue this game, or would you like to call a truce and walk away from the table quietly?

Note: this address does not accept unsolicited e-mail. Please contain all discussion regarding USENET posts to the appropriate newsgroup thread.

CB and HAM RADIO are still shared bands (it is really 10.5 meters) as
are many of the microwave bands shared with the government. the rules
were changed back in the 50's to accomodate business band service the
procurement of a licence was just an adjunct to having a ham license for
your business, this is also true of broadcasting, many tv and radio
frequencies belong to radio amateurs by deed rights!!
We cannot legally run more power, and have to abide by the rules set
down in the 50's
but we have the right to take back what is legally ours.
I think I'll see if my wife is back from the grocery store, I thik I'll
use the cb instead of trying to get on the local repeater.

"NEWINGTON, CT, Oct 15, 1999--The FCC appears to have granted upwards of 90 vanity call signs since October 1, but vanity call sign processing under the new Universal Licensing System still is far from routine, and the number of applications seems to be down. No new vanity call signs have been granted since October 7, and the FCC's ULS Task Force says it does not plan to resume issuing vanity call signs until all the wrinkles have been worked out of the system. "

Golly gee could it be that we're not stupid and aren't about to be the first to give a agency acting questionably our SSN to reside on a web server (with concomitant Swiss cheese security) ?

Could it be that many of us said ham radio isn't worth that much

QSL Maker is a nice program. _Very_ simple to use without any experience on it. I made color QSLs with a photo in about a half an hour - and it didn't take three guys to do it. :-) Only thing I would like it to do is allow editing of the text in the block. But I suspect one might be able to edit one of the files in order to accomplish that. I've never been fond of the amount of effort required to do these sorts of things with a word processor, so I'm glad somebody finally did this.

That's simply not true. Where to you come off making such a false claim?
What ever credibility you had is now gone forever.

Any US registered vessel hailed by a USCG cutter must yield and allow
the boarding party access to the vessel. Anywhere. International waters.
Foreign ports. Anywhere. Refusal to yield will result first in shots
being fired off the (underway) vessel's bow; if the vessel still won't
yield, shots will be fired to in an attempt to disable the vessel (usually
the steering system is targeted).

If thats the word you like to use Outlaw that is fine, but again shows how off the shelf some of the FCC laws really are, a law enforcement officer that goes around catching rapist,drug dealers ,mobsters,scam artist, murderers, child pornographers , pedophiles, these are the real criminals that need attention not someone talking on a cb radio with 1000 watts, I guess if you ever drive over the speed limit which I am sure you do /done I guess we'll call you a Outlaw driver

> To which I add: Conjecture is no better than not knowing, ARR

Then why is it practiced here? Frenaye quoted a "reliable source," which eliminates conjecture in the first instance. The information from that reliable source may or may not have been accurate, but that isn't some major failing in ARRL practices.

"Joe," on the other hand, equally unknown, states unequivocally that it is not part of the military. So what are his bonafides? He says Newfoundland hams were NOT notified, but that could just mean HE was not notified.

"...and it will be back again." What is the source of that information? "It seems there's nothing that can be done about it." Says who?

Geez. Idle speculation is worse than conjecture AND not knowing.

Your "reporting" might be more credible if you didn't have such a nasty and obvious anti-ARRL bias. Anonymity doesn't help, either. Why should

we place any credence in what you have to say?

Excuse me? Who's twisting your arm to use the outgoing bureau? Just send your cards to the various bureaus around the world. That way you don't have to use the ARRL you hate so much. Of course, then you'd find out that $6/lb is a pretty good deal.

It just makes me tired all over to hear an apples/oranges load of claptrap like this. One has nothing to do with the other.

Their award (DXCC), their rules. You can always get Wayne Green's DX Dynasty award (or whatever it was called), or World Radio's W-100N. It's such a mental thing anyway. You know you worked the countries, so why do you feel the need for an award to prove it?

There are times at sea where two vessels work together,know each other
real well and there is no need for id between them, so why bother? no
one is going to find you in the open seas.
let's face wasnt'it rediculus back then when we had to id in every
return of the microphone?
It would be reasonable to ID if someone asked you.

Oooo, a black ball list.

I respond to ALL QSLs, but do not send any out first, unless it's a
manager. I disagree with the continued use of paper QSLs. It's done to
keep ARRL raking in the 6 bucks a pound (too much if you look at the
rates), and keep the hook in members' mouths.

If the FCC is accepting electronic applications for the license that
authorizes you to make the contacts which generate the QSLs, who is ARRL

To which a Canadian replied

There is a local OHT radar about 30 miles to the south of my QTH. The
buzz is extremely loud and irritating... and it will be back again.

Hams in Newfoundland were NOT informed. It seems there's nothing that
can be done about it. It completely obliterates everything in a 50 kHz
bandwidth and even appears on 160 metres at times. It is not a
part of the m ilitary, but a private/research group.

The No Code International argument is that Morse Code should be a hobby only and not be included in the test. Here's my idea:

1. Ham radio is primarily for emergency communications.
2. Morse code is another method of ham radio.
3. IF WE DIDN'T KNOW HOW TO TALK, WE WOULD BE TESTED ON SSB/AM/FM ALSO!!!

Now does it make any sense to you no-coders?

(Learned much about the Code from my famous post last Spring - "Morse code" with zillions of replies saying that morse code is better for emergencies since the band conditions can be bad -- formulated this idea on my own)

I hate most of their FCC policies in 1999, their effeminate product reviews and their bitching about rate increases while they continue to hire contesters for second careers. I don't hate the entire ARRL.

> > If the FCC is accepting electronic applications for the license that

Bull. You're telling us that the ARRL should be stricter with it's dumb awards than FCC is with its licensing ? FCC should operate on the "good word" of a VE and licensee, but ARRL demands paper. They demand paper because paper inspections make money for the 401(k). E-mail probably won't.

Amateur radio is a privilege, not a right. That privilege can be yanked
at anytime. Is it your desire that the L-net be the straw that broke its
back?

"We can't control you, but you must be controlled if you are
to exist; therefore, control yourselves, or cease to exist."

A government ultimatum to Amateur Radio, 1921.

You see Jeffrey, this is where you and your homosexual buddies can all get off the train. You seem to feel that government controls EVERYTHING, including amateur radio. And should the government give you a little piece of the pie....you should then feel "privileged".

Sorry, Herman. My Constitution says "We The People", not "Hollingsworth and the FCC".

I just saw a rerun of Sanford and Son in which Redd Foxx said the ever dreaded "N" word. Shall we now outlaw TV-Land reruns of Sanford and Son, All In The Family, Maude, etc. which were all irreverent??

We see the set-up coming. You just accidentally blurted it out. Hollingsworth is here to take away the frequencies, and his excuse will be to blame it all on the Liberty Netters. And AA8DP is a little government mole who is helping to expedite the process. I've seen through "Doctor Pepper" for years.

Fred

> most of the communications done on hf bands have nothing to do with
> emergency communication.

Right. Most emergency communications are done on VHF and UHF frequencies in HAM radio AND public service radio such as Police and Fire. NO emergency communications use Morse Code. Most police officers, fire fighters, and paramedics do not know morse code, nor do 911 operators. Neither are any of them required to take tests on code since they will never need it. Why can't we ALL wake up and not require it on ham radio JUST BECAUSE some of you HAD to. This is a stupid 5 or 6 year old children's type of arguments.

Morse code has NO USE OTHER than for hobby or nostalgic use. NOTHING ELSE! It surely has no valid EMERGENCY use or Police, Fire and Paramedics would be using it! They do not, nor would any of us WANT them to use that if our owns lives were on the line!

This is such an idiotic "debate" that it is embarrasing to even TELL anyone you are a Ham operator these days! Someone might think you are one of the nut cases that REALLY and TRUELY BELIEVES that Morse Code needs to be learned in order to use a microphone, or that it is usefull for something other than hobby or nostalgic use!!

Yes, technically the old 23 channel C.B.s are illegal to use, though the chances of ever being fined for using one are about the same as me ever winning the 100 million dollar powerball lottery. Technology has changed so much that the FCC has refused to type accept the radios of yesterday. The funny thing is that you can buy a $40 C.B. today that will probably put most mobile rigs of the 70's to shame anyway, but I still like playing around with a lot of the older C.B. gear, and I tend to buy old C.B.s if I can find them at flea markets, etc.

Well get the actual measurements, and you can calculate the carateristic
Impedance.

The impedance is a function of the ratio of the diameters of the
dielectric and the Center conductor.
The formula is 138/(Square root of epsilon) * log(D/d)

where epsilon is dielectric constant
D is the diameter of the Dielectric
d is the diameter of the center conductor

note Epsilon for air is about 1 (1.0006)
I am not sure what Epsilon for Polyethylene is , but it is larger than 1.

Good luck

Indeed, most of the communications done on _amateur radio_ have nothing to do with emergency communication. Most people involved in amateur emergency communications know that reliable communication over distances greater than 100 miles is not realistic _except_ on HF. Here is So Cal we are 500 miles from the state Office of Emergency Services.

So what? Everyone knows that the Southwest was originally settled by Spain, who took it from the Amerindians. And who the heck knows who the Amerindians took it from? There's evidence of ancient oriental (Chinese?) settlements on the west coast, and recent discoveries show the probability of Whites in the Northwest
thousands of years ago. Who the heck knows who was really here first?

But the REAL issue for White Americans TODAY is: Are you going to allow YOUR country to be overrun and taken over by non-Whites? Are you going to let your culture and civilization to be utterly destroyed and turned into a 3rd-world slum? If you think a WHITE civilization and culture will be (or even CAN be) maintained by non-Whites, you have your head up your ass!

You should have read the next paragraph Bill, also, I'm pretty sure they always show up with a Marshall.

Q: The FCC Agent standing at my door does not have a search warrant, so I don't have to let him in, right?

A: Wrong. Search warrants are needed for entry involving criminal matters. One of the requirements as a licensee, or non-licensee subject to the Commission's Rules, is to allow inspection of your radio equipment by FCC personnel. Whether you operate an amateur station or any other radio device, your authorization from the Commission comes with the obligation to allow inspection. Even radio stations licensed under a "blanket" rule or approval, such as Citizen's Band (CB) Radio, are subject to the Commission's inspection requirement.

Perhaps this is the same reason that I as an amateur radio operator am not required to know CPR, how to start an IV drip, or use a high pressure water hose. One really has nothing to do with the other does it?

> Why can't we ALL wake up and not require
> it on ham radio JUST BECAUSE some of you HAD to. This is a stupid 5 or
> 6 year old children's type of arguments.

Your in serious need of a sanity check my friend, your correct 911 operators, police, fire, and paramedics have no need for morse code of course none of these you mentioned use HF transceivers in their daily communications now do they? Your trying to compare the operations of an amateur station on HF to that of a 911 operator?

> Morse code has NO USE OTHER than for hobby or nostalgic use. NOTHING
> ELSE! It surely has no valid EMERGENCY use or Police, Fire and
> Paramedics would be using it!

Ahh so were now measuring the validity of a mode of communications based on whether the Police and Fire use it? Perfect.
So when your sailing 200 miles off the coast of S. Carolina and have an emergency, don't turn on the HF transceiver, reach for a cell phone, or a VHF or UHF transceiver, because that's what the 911 operators and police use right? No I didn't say morse code, I said the HF transceiver, certainly it has no valid use in an EMERGENCY since the police and fire aren't using them right?
What you fail to understand is that there are some very valid reasons for continuing the use of morse code but you need to open your mind a little to appreciate them and your not quite there yet.

> They do not, nor would any of us WANT
> them to use that if our owns lives were on the line!

Local police and fire have no need for it. If you were in the mountains in a plane crash or a sinking ship, or trapped somewhere where all you could do is key a transmitter. I'll be you'd really appreciate someone on the other

end who knew what you were sending. Or perhaps you could just wait for the 911 operator to find you.

Really?

I wonder how much of the non-ham world reads rrap and rram regularly enough to _know_ what we are "bickering" about.

Seems to me that people who read the rra.* groups do so because they are hams, or interested in becoming hams (and therefore interested in the code issue itself).

> Contactus cognitio ergo spam,

Improper Latin. Contactus and cognitio cannot be placed next to each other for the sentence to make any sense. You can however separate them within a sentence to elaborate on the importance of the sentiment you are trying to convey. Plus the word cognitio has two separate meanings, either of which wouldn't be prefaced with the word Contactus.

When I first came here as Wakka_101, I was amazed how many license classes there were in amateur radio Rick. When I bought the Tech study guide, and learned I had to pass a code test to upgrade, I literally threw the Q&A book into the fire. Nah, I'll obtain the Tech
license during the winter/summer break. I'll then wait till the code requirement is laid to rest, then upgrade.

57 MILLION
EMAIL ADDRESSES
FOR ONLY $149

You want to make some money?

I can put you in touch with over 50 million people at virtually no cost.

Can you make one cent from each of theses names?

If you can you have a profit of over $500,000.00

That's right, I have 57 Million Fresh email

addresses that I will sell for only $149. These are all

fresh addresses that include almost every person

on the Internet today, with no duplications. They are

all sorted and ready to be mailed. That is the best

deal anywhere today! Imagine selling a product for

only $5 and getting only a 1/10% response. That's

$2,850,000 in your pocket !!!

Don't believe it? People are making that kind of

money right now by doing the same thing, that is

why you get so much email from people selling you

their product....it works! I will even tell you how to

mail them with easy to follow step-by-step

instructions I include with every order.

I will send you a copy of every law concerning

email. It is easy to obey the law and make a

fortune. These 57 Million email addresses are

yours to keep, so you can use them over and

over and they come on 1 CD.

This offer is not for everyone.

If you can not see the just how excellent the

risk / reward ratio in this offer is then there is

nothing I can do for you.

To make money you must stop dreaming

and TAKE ACTION.

The answer to the problem your complaining about is simple John. We
eliminate the use of Morse code as a pass/fail test element and then none of
The people on the newsgroup would have anything to argue about and the
entire group could move on to other subjects.

Perhaps so, Rick, but the argument is unfortunately not confined to re.radio.amateur.xxxxx newsgroups.

Any SWL who does any listening of any significance to the ham bands on HF has heard it.

Any scanner listener who has spent any significant amount of time listening to the 2m and 70cm ham bands has heard it.

Any non-ham radio hobbyist who has looked at an issue of Popular Communications or Monitoring Times has heard it.

Anyone who has spent any significant amount of time within earshot of a CB radio has heard it - although in this case, they've probably also heard a lot worse, HI.

In any event...this is the image that our community presents to the rest of the world.

Consider, for example, the casual scanner listener...Joe Sixpack who buys a scanner to listen to the local cops and fire department and get the weather forecasts from NOAA Weather Radio.

Joe hears something on NOAA radio in a voice announcement mentioning something about how SKYWARN works with the NWS offices to provide up-to-date information on severe weather in his area.

Joe gets on AOL and does a web search on SKYWARN and comes up with the frequency of the repeater the SKYWARN guys and gals in his area use.

Joe punches this frequency into his scanner and gets his first exposure to amateur radio as follows:

"Well, Dick, I've been an Extra for 27 years. I got my license by learning the code, and if anyone else can't be bothered to learn the code, then I say to hell with them. Let them stay down on the CB band with all the riff-raff and other garbage and talk to those idiots. If they can't make the effort to learn the code, we don't want 'em up

here!"

"Well, you have to admit, Larry, there's not as much use for the code as there used to be 27 years ago. I happen to be a no-code Tech myself, but I'm also the assistant coordinator of the SKYWARN group in this area, so my lack of knowledge about the code doesn't prevent me from making a contribution to my community or to amateur radio."

"I don't care what you do with your no-code license, if you don't know the code, you aren't a REAL ham."

That presents Joe Sixpack with a really good first impression of ham radio, doesn't it? Yeah, real nice introduction to the amateur radio service. Of course, Joe still hasn't found out anything about SKYWARN, has he?

So the next day while doing some grocery shopping, Joe spots an issue of Popular Communications on the magazine rack, and there's a blurb about SKYWARN on the front cover...so Joe buys the magazine thinking that perhaps now he will be able to find out more about SKYWARN. And if this issue of PopComm has an article about SKYWARN in it, he probably does.

Unfortunately, he also reads the rest of the magazine, and there in the Mailbag column are all the code/no-code letters written to the editorial staff. There are the chest-beating assertions of the pro-coders, just like the guy Joe heard on his scanner. There are the no-code Techs talking about how the coded hams at the local club ostracize the no-coders.

Joe doesn't understand what all the fuss is about anyway, so he tosses the magazine on the same pile with yesterday's newspapers and goes outside to take the dog for a walk...and there's his next-door neighbor out in the driveway, just putting the finishes touches on the installation of his new CB radio. Joe walks over there to see what's going on, and maybe ask the neighbor if he's ready to return the weed whacker he borrowed last weekend, and gets within earshot of the CB which is tuned to a channel on which two local CBers are having an argument over who had the frequency first.

"I was here first, you bleeping motherbleeper, and if you don't like it, take your bleeping radio and shove it up your bleep!"

"Oh yeah? Well bleep you! I'm going to come over there right now and put my foot so far up your bleep you'll need to have it surgically removed!"

"Come on down, ya bleep! Come on down! I'd just love to key my 1500 watt linear on your little mud duck radio while you're sitting out in front of my 20 and blow that radio to bleep, then I can come out there and kick the bleep out of you while you're here."

Joe turns to his neighbor and says, "what are those guys, hams?"

Joe's neighbor, who is a new CBer himself and doesn't know much about it yet, replies, "Well, I'm not sure, but that one guy must be if he has a 1500 watt linear, because that's illegal on CB, only hams are allowed to have them."

And thus does the ARS get yet another, though perhaps undeserved, black eye in Joe's estimation. "Yeah, probably is," Joe says. "I heard a couple of them over my scanner last night, and I was reading this magazine where a lot of them were arguing about some stuff too. Sounds like these guys just plain can't get along with anybody."

You are absolutely right. Although civility is somewhat diminished by sinking a debate to the level of another, it does wonders for a persons circulation.

Gees John, you're catching flack from the CBers on the CB newsgroup and now you're catching from your own.....Are you sure you want to go all the way to extra?

PS: I read that constitutional synopsis you wrote on the CB newsgroup. Man you just don't get it. FCC rules and regs ARE Congressional Law because their mandate was given to them by virtue of the 1934 Communications Act which created the FCC as an ADMINISTRATIVE governmental agency, AND Congress voted on this act. Its a pity they took Civics out of the classrooms. If your going to attempt to interpolate the constitution on an amendment by amendment basis, do yourself a favor by reading what powers the legislative branch of government can create upon itself and how the jurisprudence practice effects Administrative Law.

Administrative Law is SUBORDINATE to Legislative Law which is SUBORDINATE to Constitutional Law.. That's the whole reason why when you break an Administrative law, it is heard by an Administrative Law Judge....and not a Common Law judge.

I agree with John.
It is just that a transmitter would see the mismatch and have to dissipate
the higher power levels some place other than the feed-line and antenna.
A receiver would only have smaller amounts but still have to deal with less
signal due to the SWR mismatch.
Technically you John are absolutely right.
BC and the Cheek-A-Likes will never agree or admit error on these matters.

Right, you're wrong. If a cop with a search warrant is at your door and you refuse, he just forces entry. If an FCC Agent *without* a warrant is at your door and you refuse, he can't force entry. He can however go back to the office and make you wish (legally) that you had let him in.

For example, if the regular cops had had a search warrant for the K1MAN house, and no one answered the door, they would simply have broken in. The FCC, when they got no answer, had to go back to the office and start a letter writing campaign...

Big one!!! :-) I thought I had cleared it up. Don't read what I said understand what I mean. I mispoke myself big time in the first statement. I really was trying to say it doesn't matter and people don't normally check the impeadance of a antenna for receiveng.

(snip)

> A scanning receiver operates accross a much much broader range and no
antenna

My dealer says he has heard that there is/were ???? problems with this radio?

Has anyone heard of this??? Does anyone have one and what do you have to say about the one you have??

thanks for your input
Dan

Why they stop using Morse code is becsuse it need a highly trained operator to send and receive morse code. The main aim of the introduction of GMDSS (Globle Maritime Distress and Safety System, which come into force at 1st February 1999) is to minimise the skillful operator needed. Deck officers of ocean-goinging vessels can optain a GCO (General Cert. to Operate?) and operate the radio equipments on broad, thus a highly trained Radio Officer is no longer necessary.
Well, someone will argue (and I do agree) that, morse code is the best back-up media. What is needed to transmit morse code in emergency is a bettery! (Can anyone tell me how to do this?)

I personally interesting in Morse code not only because I want to optain a Full licence (equivlent to the Class A licence), but also it is useful in another media: light. We can't modulate a light source and hope it can be received by another people. But we can simply turn on-and-off the light source (a touch for example) and sending morse code with it.

I've got my amature licence for a year. However, I found that the exam didn't cover much on the operating procedures. As I was studying in Radio Communication in the college, I have never go for any RAE course. In the college, I have to go throw exams on the licencing conditions as well as radio communication (for maritime purpose unforutnately) similating and distress message drafting. I do think, if they are going to replace the Morse test by something else, it is a good idea to ask the candidate to pass a similation.

But on the other hand, is Morse code useless, worthless, something can be throw away?
Yes, morse code is no longer necessary in modern days. However, I don't want to see this billiant things fade out. It is part of our history isn't it? We have keep some of our traditions for centeries, why don't we keep the morse code as well?

I agree that forcing those who want to operate below 30MHz to learn something they don't even use in his entry life is not fare for them. Let's do it on another way round. Morse coders, let's come out and promote Morse code to our next generations! We can encourage them to learn Morse code, to keep this billiant thing alive, to keep the tradition of Radio Communication.

Good grief. You have so many issues here that a simple exchange on the internet isn't going to help you. "Effeminate product reviews?" What's that about? "FCC policies?" Wouldn't it be more appropriate to vent your hostilities towards the FCC? Oh, wait; you do.

What in the world does hiring contesters, for first or second careers, have to do with anything? Are they qualified? Are they doing a good job? Did one of them beat you out for a job you wanted? This isn't the first time you've laid out that "contester" issue. What is your problem with contesters?

The FCC issues licenses on the verified performance of the applicant. ARRL issues selected awards on the verified performance of the applicant. What's the difference?

Any electronic exchanges between the applicant and FCC is for routine housekeeping; address changes, name changes, renewals, callsign requests.

I'll tell you what, let's put together panels of 3 well qualified amateurs to, what, examine your e-mail QSLs to see if they've been falsely issued? Who do you know with the technical ability to do that?

As I said, it's apples and oranges.

> They demand paper because paper inspections make money for the 401(k).

I don't know what the rest of your sentence was, but I can tell you that a gentlemanly response to your rhetoric means a civil response, with no personal attacks, and based on facts, not emotion. I have met that standard.

A gentleman does not give up the right, nay the responsibility, to challenge and correct misinformation and false logic when encountered, nor to expose vituperative ranting for the bigoted outburst that it is.

Why is it in 1999 if you have an opinion that goes against the
Demokratically controlled executive you're hostile, but if it's a
Demokrat against a Republican, they're "doing their duty for America" ?

ARRL product reviews, purportedly "independent" are gutless. I get more
critical reviews and pannings from a computer magazine that gets review
models for free. ARRL is once again, spineless, like its FCC dealings.

No, ARRL pays too little for my education and skill level. Nor could I
be part of a hypocrite group (see above).

Yes, their recent retroactive enforcement is testimony to their
"oversight".

> Any electronic exchanges between the applicant and FCC is for routine
> housekeeping; address changes, name changes, renewals, callsign
> requests.

Unless I'm mistaken and a VE can speak otherwise, I thought that all new
licenses are submitted the digital way. What oversight ?

I'm a member. No, the rate increases are absolutely poppy cock. Again,
stop creating posts for contesters. I'm not addressing this issue
anymore as I've received 6 e-mails in as many months from other members
who read this and agree. You need to go do some research.

Impressive use of a thesaurus to employ words you might not understand
beyond the popular parlance.

My information is on target, as always. Call ARRL and ask what :

N1FOC did before the buro
John Bee did
How many more books they'll pay K1ZM for

and those the just are the first that come to mind in the past 5 years

Are you posting under two different addresses ? I don't have time to

I am a VE and I can tell you that no individual applicant submits their application directly to the FCC. Applications are submitted by the VEC. The oversight is thus from the VEC. You need to do a little research.

> > I'll tell you what, let's put together panels of 3 well qualified

I challenge you to find anyone that can detect faked e-mails. There's an entire "spam" network that proves you can't.

> Again, stop creating posts for contesters.

What in the world does that mean? I ask again, what is your issue with contesters?

> I'm not addressing this issue anymore as I've received 6 e-mails in as
> many months from other members who read this and agree. You need to go

Your idea of competent affirmation is one e-mail per month from readers of r.r.a.m.? You need to look up "research" in any reputable dictionary.

> Impressive use of a thesaurus to employ words you might not understand
> beyond the popular parlance.

Heh, heh, heh.

> My information is on target, as always.

You haven't posted any "information" yet. All you do is criticize with unfounded or at least undocumented accusations. You have a deep and unhealthy hostility toward the ARRL, the FCC, and the government.

> Are you posting under two different addresses ? I don't have time to

Nope. I'm an open book. I identify myself and my bonafides and have little confidence in the output of those that don't.

i work in a warehouse that ships our product world wide by truck only to boat docks, across continental / national boarders etc.
you'd be suprized at some of the junk radios that these truckers hook up to these "10kw" antennas.
the antennas cost more than the radio did new and most don't even OWN an amp.
if i had a swastica flag hanging from my front door, it wouldn't mean that any illegal activities were going on inside.
some of these truckers care more about the looks of there trucks than they care about their onw health.
there is no law against vanity run wild and i seriously doubt that any federal judge would risk looking foolish by issuing a warrant to bust a 2 watt junker just on the looks of an antenna and yes the fcc does need field strength readings, key signature or voice prints to back their case.
otherwise there could be laws made for being ugly which would be the case here.
a 7 foot firestick can easily handle 1.5kw but is this justification for the inconvienance of a search?
i don't think that would hold up on an appeal. worse things have gotten by on this technicality.
worse yet, if it didn't hold up, the fcc would be open for a malicious prosecution suit.
they can't afford to do their jobs now let alone defend a suit over an "ugly" antenna.
think about it.

Hi,
I have an Astatic mic, one of the "LollyPop" stand type. with a standard 4-Pin audio connector on the end of the cable. Its a factory fit, so hasn't been modified at all.

Wondering if anyone knows what the pinout is for this plug is. Can't seem to locate it anywhere.

Thanlks
Bob

Read this, then tell me that the FCC can force an inspection without a
warrant.

Most D 104 mikes have the wiring diagram glued on the underside of the base cover. For ham use I always remove the amplifier in the base if it has one.

Do you mean "W" or "AT"? If the latter, why must is be longer?
"_ _ _ ." is available and would be no longer than ". _ _".

BTW. if the / was used, I can't see that anyone would misunderstand.

The debate over code vs no code is, in my opinion, akin to the debate over the existence of a divine entity. People are going to believe what they want to believe and no amount of argument is going to change that. No matter what decision the FCC finally makes, there are going to be people unsatisfied with it.

I think a better direction of our energy would be to educate and inform the non-Ham public on what Ham radio is all about. There are too many people out there who associate Ham radio with CB. Maybe if we, as Hams, can bring about a stronger awareness of our hobby to the general public (including ALL aspects of the hobby) we can attract more people to the hobby.

Notice nowhere in his obit was the mention of ham radio.
Because it was wholly meaningless

Welcome to ham radio-set your watch back 40 years

Please visit my World Wide Web Site, you have never seen a page like it.
You will see:

1. How to pass the A+ Certification
2. Really interesting answering machine messages
3. A blond naked chic being held by a female ham!.
4. How you know you are a ham.
5. Hear Ted Kennedy really screw up in front of Clinton
6. Actually sounds of Bill Clinton "after the lov'in".
7. The writings of me and others on ham radio, hear a typical ham contact.
8. The warm side of K1OIK, hear me speak, see me with famous people.
9. An amazing card game that will shock others
10. Pictures of me and my family.
11. Did common German's enable the holocaust?
12. See now the future of ham radio.

I agree. The only problem is that UNTIL code testing ends, the
folly of its being a requirement gets in the way of presenting
rational discussions with none hams.

>>This is such an idiotic "debate" that it is embarrasing to even TELL

Tim, KK7HO, your E-Mail address is invalid.

The hunting and fishing is excellent in this area. Licence fees for foreigners are quite expensive and the season for Moose and deer starts this year on 2 Nov. I could literally shoot a moose or deer from my back porch if I was so inclined. I am not a hunter.
Thank you for your encouraging words. I still haven't made the decision to proceed as yet but I have heard Europeans operating from the West Indies on what they would consider DXpeditions. It sure would be a different type of vacation for a Ham. By the way, 3950 and 14313 are 59+ here.

I tried making this point when I first started posting to this
newsgroup, but it was like talking to a brick wall. There is one ham
in this NG who, by his own admission, would sooner see the ARS
dismantled than have any further no-code licensing...and yet, people
still dignify the idiot by responding to his posts.

Listen to a CB radio and what do you hear? You hear some courteous,
responsible operators with an interest in promoting the hobby...you
also hear a lot of morons arguing about utter nonsense, sounding for
all the world like a bunch of undisciplined children.

Read this newsgroup and what do you see? You see some courteous,
responsible hams with an interest in promoting the hobby...you also
see a lot of morons arguing about utter nonsense, sounding for all the
world like a bunch of undisciplined children.

Read a magazine that has anything to do with ham radio (CQ, 73, QST,
Popular Communications, Monitoring Times) and what do you see? You see
some courteous, responsible hams with an interest in promoting the
hobby...you also see a lot of morons arguing about utter nonsense,
sounding for all the world like a bunch of undisciplined children.

Anyone care to hazard a guess as to why the non-radio public might
associate ham radio with CB?

Is it really necessary to point out that Spanish is a European language? Those cities were not named in an aboriginal language. The aborigines adopted the language of the White men: Spanish.

Some of the Amerinds, seeing the white skins and sometimes blue eyes and red beards of the Spaniards, believed that the Conquistadores were the fulfillment of ancient prophecies about the return of White gods who, according to legend, gave the aborigines the rudiments of civilization. Some speculate that these legends have a basis in fact.

Spanish is part of the Indo-European (or Aryan) family of languages, and is one of the "Romance" languages derived from Latin (hence the term "Latin America") which also include Portuguese, Italian, French, and Romanian.

Followups set.

With all good wishes,

--

Kevin Alfred Strom.

OK Glenn, EXACTLY how many years have you been in possession of a
VALID AMATEUR RADIO LICENSE ISSUED BY THE FCC? What
was the CALLSIGN & CLASS of ANY VALID LICENSE you are claiming
& SPECIFICALLY what years was it valid?

977. KV4FZ

Newsgroup: rec.radio.amateur.misc
Date: 1999-10-19 00:00:00 UTC
From: franktodd4@my-deja.com
Message-ID: <7ui3t5fnc1@nnrp1.deja.com>
Source record: 129375

KV4FZ has been an active amateur radio operator since 1954 when he was first licensed in the Midwest as W0VXO. While working his way through college (1960-64), he spent summers teaching at several camps for the physically handicapped. He was highly successful in teaching seriously disabled campers about the potential of amateur radio. Many of these campers went on to fully qualify for their amateur radio licenses.

His father, W.B. Schoenbohm, was the founder of Courage Center in Minneapolis. Herb was a major force in pushing for the initiation of the Handi-Ham program, which is now widely recognized as the premier service organization for disabled radio amateurs. After college, Herb worked as a international sales representative for Gates Radio, Harris Corp, and Collins Radio. He sold and distributed broadcast equipment to the international market, primarily Latin America. In 1968, he moved to the U.S. Virgin Islands with the intent of better serving his customers. His wife Monika was, at that time. a service representative for Pan AmericanAirways. KV4FZ was very active in DX work and, as a frequent traveler, put many new countries on 160 meters. He was instrumental in getting Stew Perry, W1BB, the necessary countries to be the first ham ever to get DXCC on 160 meters. He also gave G3IOR the last country he need (VP2EFZ, Anguilla) for the first ever DXCC via satellite (Oscar 7).

During the 1970's, KV4FZ was able to set CQ World Wide records 160-10 in almost ever category except 40 meters. He was also very active in supporting the IARU Intruder Watch after encountering frequent yachts in the area that had acquired licenses of convenience for a fee. At that time, FCC Commissioner Margita White appointed KV4FZ as the Virgin Islands SECC. The SECC has responsibility to plan and manage the operation of radio communications resources during island emergencies. Herb fulfilled that role magnificently and was named a Virgin Island "Hero" after Hurricane Hugo destroyed most of St. Croix in 1989. Herb received this award for keeping vital communications circuits open during the crisis.) Herb also took a detailed interest in how most of these "pirates" has a close association with the so-called "service nets" on the top end of 20 meters. He joined the net and attended several of the hamfest functions. Only then did he learn how deliberate and sordid was the manner in which net members misused the amateur spectrum as a means to provide an international telephone toll by-pass service. One of the most flagrant of all these operations was the "INTERCON" network operating, for the most part, on 14.313 MHz. Herb began detailed monitoring of their operation and intercepted many communications that were appalling to say the least. In 1979, KV4FZ listening to what appeared to be a "business connection" between WB6MID/8R1 in Jonestown, Guyana and WB6MID in Ukia, California. Herb broke in and informed the net personnel that this type of operation on

an amateur frequency was illegal. Furthermore, Herb stated that their communication constituted international business communications related to funds transfers and the procurement of equipment and supplies. The net hierarchy reacted by excoriating him for his "embarrassing comments" and ignoring the violations. The net bluntly told him that the Jonestown Operation was a missionary group and that they had special permission from the Carter administration to use ham radio to further their "worthy cause". Herb persisted with his concern and was quickly declared 'PERSONNA NON GRATA" by Robert Sternberg, AA4EE, a tax attorney who claimed to be the nets legal advisor. Herb expressed his concerns to other net operators participating in the companion "Maritime Mobile Net" such as Dick Eastman, N5FX and Mike Galego, KA4MUJ. Several Maritime Net members agreed that some of the more criminal practices, such as one ringers and "maintenance charges" for providing long distance toll free connections practically anywhere in the world, must be curtailed.

Some of the net cabal hierarchy rebuffed all attempts to institute reform and a nasty power struggle ensued. Eastman and Galego were "ex-communicated" by Ruth Hoffman N4LMC, Eddie Ricca K4PT and Art Candell N4PCK. The latter began a propaganda campaign, replete with false stories and personal attacks, that promised to destroy any net opposition that sought reform. The net members objected to the lively participation of KV4FZ, KA4MUJ, and N5FX (a former net director) who frequently brought to the attention of net participants certain stations whose conduct violated the FCC and International Rules.

During the 1980's, net members began a campaign of coordinated complaints to the FCC claiming that the aforementioned three were causing willful and malicious interference to the net. N5FX and KV4FZ both received prefabricated FCC citations at the behest of the net command. Both were able to get the FCC to nullify their actions based on the fact that their constructive comments did not constitute "malicious interference" and that certain members of the net themselves were engaged in a premeditated campaign of harassment and interference.

Several members of the net were subsequently caught interfering with the communications of KV4FZ and KA4MUJ. They include K2BFI and AA5LY. AA5LY later gave the FCC, and supporters of KV4FZ and KA4MUJ, a complete and accurate accounting of the plot by disgruntled net members to "settle the score". That plan included a vigorous campaign of letter writing to politicians in Washington in an attempt to pressure them into punishing the net detractors.

N4PCK had his own reason to get even. He had known Herb while he was operating in Haiti as HH2A and was very active on the INTERCON net. Herb had learned, through his contacts in Haiti, that Candell had a serious problem. He would solicit young pre-teen boys and pay them a quarter to perform sex acts on him. A prominent Haitian administrator was told, by his son, that the young boy had been abused and sodomized by Candell. There was no arrest or trial. But the arrival of the

outraged local citizenry at Candell's hillside villa dictated that Candell receive an armed escort to the airport. Candell then appeared in the Orlando, Fl area, illegally using the call HH2A/W4 and actively engaging in net activities. The net watchdogs, now known as the B.A.R.F. (The Better Amateur Radio Federation), pointed out that Candell was not eligible to use a Haitian call sign in the United States unless he was a Haitian citizen and had been granted a proper permit from the FCC.

Again the net members supported Candell and sought to silence Herb. However, the FCC ruled that Candell could no longer operate from Florida unless he obtained a valid U.S. amateur radio license. Candell later paid off a VEC in Silver Springs, Fl to fraudulently give him a passing grade on a General Class license examination. The VEC was later sanctioned but Candell was neither removed from the air nor required to be re-examined. In 1989 Candell was finally arrested and convicted of multiple incidents of child molestation. He was given a suspended sentence that was partially based upon INTERCON's assertion that he had been rehabilitated by amateur radio service in their net. (Candell was arrested and convicted again in 1994 for carnal assault on several boys between 8 and 10 years of age whom he had invited into home under the pretense of showing them his ham station. He has been institutionalized for several years but his ham license was, nonetheless, renewed in 1996 for another ten years.) In 1990, Candell continued with his plot to destroy and discredit KV4FZ in retaliation for Herb's alleged "interference" with the net's "business".Candell actively leagued with other enemies of KV4FZ such as Pat Miller,KP2J in St. Thomas, and Richard Whiten, WB2OTK. Miller supplied Whiten the so-called "proof" of a crime by playing a recorded tape on both 20 and 75 meters. Miller introduced Candell to the operator of a long distance resale service that KV4FZ briefly subscribed to in 1987. Some of the users of the CALLS (Caribbean Automated Long Line Service) system (a six digit access code system on which half the possible combinations of digits gained the caller access to a WATTS line) had been illegally abusing the CALLS scheme. Malcolm Ford had claimed losses to the tune of $200,000 and needed a scapegoat. Thereupon, it was decided that a criminal case should be manufactured against Herb, KV4FZ.

Ford needed this falsification to support his ludicrous claim that the impending bankruptcy of CALLS was not due to his inept management. Instead, it proffered that somehow Herb had caused his business to fail. This was vital to Ford because he was still salaried as the GM of CALLS even though they were in receivership. Ford's efforts failed and he was physically removed from the operation after the Federal Bankruptcy judge found him raiding the treasury and assets of CALLS.

However, all during this time, Ford was fabricating evidence in an attempt to establish a connection between CALLS financial failure and KV4FZ. Yet the Department of Justice continually refused to prosecute Herb. This resulted in even more acrimonious letters to officials and politicians in a further attempt to implicate Herb as the culprit.

Malcolm Ford, the previous owner of CALLS, was then under investigation for bankruptcy fraud. In an attempt to escape indictment, Ford hired John Ackley, KP2A, to fabricate various reports that would designate Vitelco(a local phone service), STSJ Long Lines, ITT and Herb as coconspirators who were attempting run him out of business. While this was going on, Ackley was attempting to buy the nearly defunct company for ten cents on the dollar. (Ackley failed but STSJ was able to get the company back on its feet.) Miller, Hoffman, Candell and others intensified their letter writing campaign to hundreds of politicians in Washington urging them to investigate. They even began writing letters to newspapers, claiming that politicians were shielding KV4FZ from prosecution. In these hate letters to public officials, Herb was equated with organized crime, drug trafficking, and high level political corruption. In 1991, KV4FZ was writing a hard-hitting column for the St. Croix Avis newspaper. Herb frequently attacked political corruption so it stood to reason that he might have some enemies in government. Herb had articles published about the check kiting and House Banking fraud perpetrated by the Virgin Island Delegate to Congress, Ron Delugo. Outraged and distraught, Delugo (who had designs upon becoming the next governor of the Virgin Islands) assigned a full time staff attorney (Sylvester Julian) to explore methods of pressuring the FCC, the Secret Service, and the Department of Justice into investigating Herb and "putting a 'severe hurting' on him".

However an obstacle remained in the path of their plan to annihilate KV4FZ. Some at the FCC supported Herbs activities on behalf of the amateur radio service. Additionally he was elected as Vice Chairman of the Virgin Islands Republican Committee, which made him a frequent delegate to the GOP Conventions. Furthermore, Herb was personally acquainted with President Bush. Herb's father had served on the President's Commission for the Handicapped.

Initially, each and every involved agency claimed there was not enough evidence to support a charge against Herb. Subsequent to this, John Ackley, KP2A, manufactured a list of 660 telephone calls that were prearranged to add up to $1,047 in value. This was exactly forty-seven dollars over the amount needed to achieve the threshold of prosecution. Delugo wrote threatening letters to various government agencies threatening that he would see to it that their funding was severely curtailed if he did not receive figuratively receive Herb's head on a silver platter. Ruth Hoffman constantly badgered the acting U.S. Attorney for the Virgin Islands, Terri Halpern. This continued to the point that Hoffman was finally ordered to stop harassing Halpern. However, as a Congressman to the VI, Delugo was in a position convince colleagues not to block Halpern's confirmation. Delugo reportedly told Halpirn that, unless she prosecuted Herb Schoenbohm, she would never become U.S. Attorney. (Halprin was fired in 1992 by the DOJ for ethical lapses after the Office of Professional Responsibility investigated the severe criticism, from the 3rd Circuit Court of Appeals, that Halpern received for the "knowing use of false evidence" to secure a conviction. Nevertheless, the trial prosecutor was cleared by OPR because they were unable to prove that the prosecutor actually knew the evidence used was

false.)

Herb's trial took place in April 1991 (four months past the five-year statute of limitations). Both Ackley and Miller testified, under oath, as to the veracity and accuracy of the incriminating evidence they had assisted in concocting. (Miller offered his so-called "caught in the act"tape of Herb dialing "illegal access codes". Ackley presented his list of random numbers that he verified, as a government expert witness, were all telephone numbers dialed by defendant Schoenbohm.

The puzzled and confused jury convicted Herb on all three counts of Title 18, SS 1029(a): 1,2 and 3, which is, in reality, an illegal credit card statute. This statute has been used infrequently to curb the illegal use of cloned cellular telephones. After trial, Schoenbohm with the help of Bob Sheron, W4ASX, closely scrutinized the evidence and began tracking down the parties that Ackley had claimed, under oath, that Herb had illegally called. A most amazing discovery unfolded: most of the persons contacted did not know Herb Schoenbohm or had never had a telephone conversation with him. Amazingly, they had already given statements confirming this fact to the Secret Service investigators. Most had even identified persons, other than Schoenbohm, whom had called them from the Virgin Islands during the timeframe in question (1987). Interestingly, the court refused to allow Schoenbohm to verify the numbers before trial.

The court incredibly claimed that it needed to protect the potential witnesses from pre-trial disclosure! After trial, armed with affidavits from the persons alleged to have received Herb's "illegal" calls, Herb moved for a Judgment of Acquittal not withstanding the jury verdict. The court granted the motion on all counts but one (Possession or Use of a Counterfeit Access Device). The court maintained that the Miller tape proved that something was amiss and the jury could correctly deduce from this that the law had been broken. This court decision differs from the previous decision in that the device is similar to, but not exactly the same as, a valid device and does not require the threshold of over $1000 in use. (The irony in this entire matter is that Herb freely admitted to using the service briefly in 1987. He was a bona fide customer and the total actual use amounted to $106. CALLS finally was required by the court to produce Herb's check for $104 that they had received in1987. They admitted that they did not cash the check but, instead, held it as an aid in the plot to entrap KV4FZ.) When the court vacated the judgment requiring two months prison time, Herb's detractors were enraged and, once again, began the political letter writing campaign. Now the claim was that Herb had used amateur radio in the commission of a crime and should be taken off the air. They sent the highly doctored Miller Tapes to the FCC in an attempt to prove their incredible theory. Their letters were full of outrage over the fact that Herb had once more cheated Madam Guillotine and he still on the air making waves. Some were furious due to the fact that they had given financial support to certain political candidates and nothing permanent had been done to rid the airwaves of this "pest", KV4FZ. (Ruth Hoffman even conveyed gifts to

officials at the FCC in attempt to bribe public servants. One such official, William Cross, was investigated for leaking internal information to Ruth Hoffman in the KV4FZ matter. Hoffman then disseminated this information for use in the hate campaign against Herb.)

KV4FZ then was subsequently forced to embark upon a long and costly struggle for justice. He has had to fight the refusal to renew his amateur license by demanding a hearing before the FCC. (The refusal to renew is rarely used as a procedure and has been given the title: "The FCC Death Penalty" because the entire burden of proof is placed upon the licensee.)At the first FCC hearing, Administrative Law Judge Luton ruled against KV4FZ. However, upon higher review, the FCC General Counsel refused to accept Judge Luton's findings and remanded the matter for reconsideration. The principle issue is whether or not KV4FZ had used amateur radio in the furtherance of the commission of a crime. This time the ALJ ruled that there was nothing in the evidence (The Miller Tape) that was illegal in anyway. The concluded that Schoenbohm actually was dialing ordinary and valid Virgin Islands telephone numbers. He was not entering illicit access codesto make long distance calls.

The ALJ did, however, agree with the Wireless Telecommunications Bureau (WTB) assertion that, by giving out the telephone number, in 1994, of Herb's future boss, Congressman Frazer (whom, incidentally ran Delugo out of office), Herb was violating a solicitation restriction of ex-parte rules. This was despite the fact that WTB had conceded that no actual ex-parte violation had taken place. The ALJ ruled that, by attempting to explain his conviction as a De Minimus violation rather than a crime of major impact, he was trying to mislead the trial of fact. (In administrative law, the assertion of innocence is a crime even if the accused is actually innocent! It is akin to Hobson's Choice or the Salem witch trials whereupon, if the tied woman is thrown into the pond, and she does not drown, then she must surely be a witch and, thus, must be burned to death.

Herb had been fighting the remaining count through the Federal Courts and has even succeeded in convincing the courts to severely criticize the DOJ for their handling of the case. Nevertheless, they refused to reverse the remaining conviction because of the nearly impossible to define "standard of harmless error". The appellate court ruled that the motion for Judgment of Acquittal had been filed too late even though the trial judge had granted an extension based on the emergence of irrefutable proof that the prosecution had used false evidence. As a result they were barred from considering the sufficiency of evidence matter at this late date under the rigorous standards of Habeas Corpus review. However, a positive revelation in the latest FCC decision is that it clearly vindicates Herb on the original charge of using ham radio in the commission of a crime. It also conclusively proves that his detractors engaged in perjury before a Federal Grand Jury and Petit Jury trial.

Many on the local scene recognized the truth. The Trial Judge, The Honorable Ann Thompson, wrote a letter of support and praise on Herb's behalf. The Governor of the Virgin Islands did not simply restore Herb's government career. He elevated Herb to a position of higher authority with more responsibility to the island and a significantly higher salary. He was also employed, as a part-time field representative, on the congressional staff of newly elected Congressman Frazer.

The FCC WTB attorneys characterized these as "political jobs", unworthy of consideration as a mitigating factor in Herb's "rehabilitation"!) Although Herb had a Congressional Floor Pass, granting him direct access to the ears of the politicians, there is no evidence that he ever abused his position to lobby House members against the FCC. This is in spite of the fact that the bureaucrats inside the FCC are very much afraid that Herb might just whisper in the ear of someone who controls their finances. Because of this, Herb is not allowed to take his case to the very people who would be horrified to learn the truth about how he has been treated. These are the people who could finally put a stop to this travesty of justice. Yet, Herb's detractors are on the phone daily, pushing those in power to get him off the air, one way or another. When will the voice of reason and justice be heard?

Some of us do not like the odds and are willing to help end this fiasco. Herb's legal bills are soaring but he continues the fight. His attorney, Larry Colby (a licensed ham), has stated that when this issue gets into the proper arena, Herb will be totally vindicated. But this can only happen if Herb is allowed to fight on and get his case into the proper arena. Right now, it is still in a forum where all the rules are stacked against the licensee. When the matter gets out of the FCC, and into the D.C. Circuit Court, then the playing field is closer to being balanced. There, the Feds don't have the automatic upper hand that allows them to do what their political puppet-masters demand.

A small donation of $25, $50 or $100 will go a long way in continuing the fight for justice. There is an underlying principle that must be preserved. It is not keeping Herb on the air that drives his supporters. It is the realization that if they can deprive KV4FZ of justice then they can deprive any of us of justice. Today they are persecuting KV4FZ. Tomorrow it could be you. You could be railroaded just because somebody doesn't agree with your position on the nets, phone patching, or apple pie. Herb is working vigorously to get the funds together for his appeal. His attorney Larry Colby is attempting to get an extension of time to file exceptions. If you can help in anyway, please contact John Dillenger, K4GFM, who is the custodian of the Defense Fund.

<snip>

Straight to the battery - that's the ticket!

Crawl under the dash, pull the rug, and look around - you may find a cable path or paint plug already there. My 1995 & 1993 Saturns have a hole through the firewall on top of the transmission hump - the manual shift linkage tube runs through it on the '93, but there was still enough space to get some AWG 10 through there to the battery. I even found a hole on my ol' family truckster, a 1970 Ford pickup.

Poke around a bit - there's a better than even chance that you won't have to drill.

As far as handhelds, a decent gain antenna in the right spot can make those 2-5 watts work wonders. Did that for years, too.

Stan

Right. Morse Code and CPR have nothing to do with using a microphone
and communicating over a radio.

> Your in serious need of a sanity check my friend, your correct 911
> operators, police, fire, and paramedics have no need for morse code of
> course none of these you mentioned use HF transceivers in their daily
> communications now do they?

First of all, that has nothing to do with the argument that Morse Code
is helpfull in emergency situations, but YES many state police use HF
frequencies. Again, not that the frequency used has ANYTHING at ALL to
do with this argument!

Your trying to compare the operations of an
> amateur station on HF to that of a 911 operator?

We were discussing the importance of Morse Code in Emergency
situations. Sorry you can't understand.

> > Morse code has NO USE OTHER than for hobby or nostalgic use. NOTHING
> > ELSE! It surely has no valid EMERGENCY use or Police, Fire and
> > Paramedics would be using it!
>
> Ahh so were now measuring the validity of a mode of communications based on
> whether the Police and Fire use it?

Yes. They are able to handle emergency communications without Morse
Code, so the argument that it is needed and usefull in emergencies is
not valid.

> So when your sailing 200 miles off the coast of S. Carolina and have an
> emergency, don't turn on the HF transceiver, reach for a cell phone, or a
> VHF or UHF transceiver,

Are you really this stupid or just being a troll? Why can't you use the
HF transeiver with a microphone like the State Police do?

> What you fail to understand is that there are some very valid reasons for
> continuing the use of morse code.

Nostalgia and hobby enjoyment. Nothing else.

> Local police and fire have no need for it. If you were in the mountains in a
> plane crash or a sinking ship, or trapped somewhere where all you could do
> is key a transmitter. I'll be you'd really appreciate someone on the other
> end who knew what you were sending.

Right, but since most of the population do NOT know morse code, it would
be in your best interest to call for help with a MICROPHONE!

Commercials on radio and TV are not in Morse Code for that same reason,
they want their message to be understood by as much of the listening
audience as possible. Try to sell a product to the 3 people tuned in
that understand Morse Code would be a waste of advertising dollars and
time!

Or perhaps you could just wait for the
> 911 operator to find you.

Perhaps you could call 911 and talk to the operator by Morse Code and
see if anyone comes to help you.

Unlike the human voice right? Only difference is most of the population
on THIS planet don't UNDERSTAND Morse Code, so a translating morse to
text device is needed.

> 2. Morse allows the exchange, albeit basic, of information between two stations
> who speak different languages.

Complete Bullshit. How do you tell someone in russian "send an
ambulance to the building behind the large pine trees" in Morse Code
without knowing russian? You CAN'T!

Some may have a hard time understanding a Spanish
> speaking operator describing his station in Spanish but I would understand
> completly:
>
> Name HR is Juan, QTH Juanajuato, UR RST 579, WX HR 24C, RIG Kenwood ES ANT Yagi
> ES dipole, PWR 35W

Great! And without using Morse Code too! Abreviations can be given with
the international phonetic alphabet.

> 3. It allows quick identification of repeater systems that ID in morse

Morse is quicker than speech?! Not only is it not understood by most of
the population, Morse is much slower and inefficient than talking
normally.

> 4. It allows communications between two stations when SSB signals may not be
> copiable.

Voice allows communications when MORSE is not copiable due to the fact
that MOST of the population do not understand it.

> 5. Using a 250 Hz filter you can fit more operators into 3 KHz than you could
> using SSB. Thus more efficient use of the band during crowded conditions.

Which makes more sense... Hundreds of operators using the band to send
messages no one understands, or just a few people sending messages MOST
understand?

> 6. Since building IS a part of our hobby we shouldn't ignore the fact that a CW
> transmitter can be built using the most basic circuits

Same with a black and white TV over a Color TV. I prefer Color TV. An AM radio uses fewer parts than an FM, But FM sounds a lot better. A washboard is easier to make than a washing machine, but i would much rather have the machine.

> 7. I'll grant you that many digital modes have a better and faster throughput and
> work better under noisey conditions.

good.

but then consider how many contacts could you
> make using Clover vs the number you could make using morse.

Consider how many contacts you would make using speech that everyone can understand rather than a secret code that only a small fraction of the population know.

That is to say, how
> many HF ops are active using Clover vs morse?

How many people communicate at work or at the store in Morse vs speech?

> In my opinion, these are some good reasons for keeping morse,

So, then you admit that there are none.

> >6 year old children's type of arguments.
>
> Knowledge of code is not required if you choose to remain above 30 MHz.

It also isn't required if I want to brush my teeth, what does that have
to do with anything? it should not be required on ANY band just because
some had to learn it to get there in the past and want everyone to do it
just because they had to.

> >Morse code has NO USE OTHER than for hobby or nostalgic use. NOTHING
> >ELSE!
>
> Same could be said of SSB, ATV, SSTV, meteor scatter, et cetera.

Television is used for more than hobby or nostalgic use. SSB has
nothing to do with this as you can use voice or morse code with it.
Stay with the concept of the discussion!

> >It surely has no valid EMERGENCY use or Police, Fire and

What?

In the cw bands?

But all the cw fans keep telling us that it is only phone
operators who cause problems on the HF bands--NEVER cw users.

How horrible!

Another illusion crushed!

>What would be the benefit of doing away with the subband allocations?

It would open up a great deal of bandwidth to the _majority_ of
hams who prefer phone or other modes to cw, and would allocate the
frequencies fairly to all amateurs instead of providing special
treatment for those who use cw--a mode with no more or less value than
any other.

My point was that nothing you said pointed to a necessity for Morse
proficiency for access to HF ... I stand by that assertion.

The point of the grammar lesson was that it would facilitate more
meaningful communications with foreign language speaking hams
to become proficient in their language and have a REAL conversation
instead of resorting to arcane abbreviations of English terms in
an antiquated code because the latter technique severely restricts
your ability to have really meaningful dialogs. Far more
"international
goodwill" could be established by showing enough interest to learn
and speak to them in their own language than sending silly codes
in Morse.

Right "let them (nocoders) eat VHF" ... and you think that Morse can
help to complete a contact (one that I view as rather empty and
sterile).

Ok, so you "respect my point of view but don't agree." What part of
that
is supposed to surprise me?

Guess again. I have personally argued the jurisdiction point with two city attorneys and the the District Attorney when a local judge signed a search warrant on a Ham and CB operator, which fell on deaf ears. All they said was "Hey, the judge signed it, it is legal." And "The F.C.C. has abdicated authority to the local officials." Local police in Green Bay WI, without the F.C.C. or Federal Marshall executed the warrant. All because a local alderman with help from a willing Detective Police Sergant wanted that person out of the neighborhood.
The police confiscated ham gear, CB radios, and even a personal stereo. None were returned. It wasn't until a few choice words (Lawsuit agains the City with apprpriate media coverage) were said to the then Mayor at lunch with his cronies did the harassment stop.

You can NOT do anything to communicate across to another language without knowing it by using Morse Code instead of a Microphone!! STOP this silly bullshit!! Using abreviated letter codes can be done with a microphone and the international phonetic alphabet too! Morse Code only makes it more confusing and inefficient!

There is NO MAGIC that Morse Code has that can mystically translate between two different languages!!

And even your silly little abreviated codes can not do anything but allow you to exchange reception reports, you can not talk about how you just painted your house or bought a new dog with your limited vocabulary across language barriers!

Rick..you misguided fool. The beacons on 14.1 are qrm'ed by digital modes. NO ONE operates cw on (or near) that freq. CW operators stay in their sub bands. Try pulling your head out of your ass...quit the whining and crying about learning code..and frickin live with it. The cw requirement will be there for YEARS..!!!
At best (for you losers) the code requirement will be lowered to 5 wpm for HF privileges. It'll be years and years before it'll be dropped completely. If you want HF without code...why wait...go by a CB radio and talk skip with your buddies

sometimes the truth hurts

I'd rather see ham radio die a dignified death..than see it turned into channel 19

>someone else wrote

>> most of the communications done on hf bands have nothing to do with
>> emergency communication.

>Right. Most emergency communications are done on VHF and UHF
>frequencies in HAM radio AND public service radio such as Police and
>Fire.

My, how quickly they forget. Prior to the VHF-FM explosion in the early 70s, almost all amateur emergency comms were conducted on our HF bands; 160, 80, and 40 meter bands easily provided local, regional state-wide comms. They still do; every time there is a wide-area disaster, HF frequencies are set aside for that emergency.

Amateurs (and PSB) rely on high-elevation sites for their VHF comms; once those sites are taken out of the equation, unless operators are skilled at passing traffic in a point-to-point simplex manner on VHF, their HTs (and VHF-only license) are useless. Then HF proves it worth again for local, regional, and state-wide comm capability.

>NO emergency communications use Morse Code.

That simple but false statement invalidates everything that will ever come from your keyboard. Not a week goes by without an emergency call on CW on the HF marine bands somewhere in the world. Think on a global scale (HF) rather than just locally (VHF).

>Most police
>officers, fire fighters, and paramedics do not know morse code, nor do
>911 operators. Neither are any of them required to take tests on code
>since they will never need it.

And hams who want to be just like them and operate only VHF+ don't need to take a test on Morse, either. So what's your point here?

We did away with the code exam for VHF+. Be happy with it.

>Why can't we ALL wake up and not require

>6 year old children's type of arguments.

Knowledge of code is not required if you choose to remain above 30 MHz.

>Morse code has NO USE OTHER than for hobby or nostalgic use. NOTHING
>ELSE!

Same could be said of SSB, ATV, SSTV, meteor scatter, et cetera.

From some poll, it's said that CW is the second-most used mode on HF;
but most of the time I count more CW QSOs than SSB QSOs.

>It surely has no valid EMERGENCY use or Police, Fire and
>Paramedics would be using it! They do not, nor would any of us WANT
>them to use that if our owns lives were on the line!

There is no code requirement if you want to operate on VHF as those
folks do. They also don't use SSB, either, so next you'll be telling
us that SSB has no valid emergency use. =:o

You continue to mix apples (VHF) and oranges (HF). Bad boy.

>This is such an idiotic "debate" that it is embarrasing to even TELL
>anyone you are a Ham operator these days!

This is an internal debate; few folks outside the ARS are aware of your
whining. If they did care, they might also ask, "Why is a knowledge
of electronics still being required get receive a license -- after all,
no one builds their own radios anymore, right?" (Ha! I do!)

>Someone might think you are
>one of the nut cases that REALLY and TRUELY BELIEVES that Morse Code
>needs to be learned in order to use a microphone, or that it is usefull
>for something other than hobby or nostalgic use!!

Well, why require that someone know about all the other modes (RTTY,
digital, ATV, SSTV, satellites, moon-bounce, meteor scatter, et al)
if they're only going to utilize a mic? It's just one of those unknown
wonders of the world. Accept it or you'll get an ulcer.

Look again at what you wrote above ....

>> There is no such thing as a 50 ohm match
>> for receiving. It is rare looking from the receiver end and pointless to try
>> and achieve it. Poor advise to say the least.

Then look just above at what you wrote in same message ... a contradiction.

You guys are kinda comparing apples and oranges ... or maybe walnuts and almonds in this case. Yes there are mismatches when you move off the optimum frequency of the antenna. In the case of transmitters, one generally finds them operating on one or perhaps more frequencies in general proximity to the resonant antenna in a 50 ohm match. In worst case, there might be a broadband Tx operating in an entire band, such as 150 - 174 MHz into a broadband antenna with a close match accross this range around 50 ohms.

A scanning receiver operates accross a much much broader range and no antenna can possibly offer a good 50 ohm match, a good 75 ohm match , or whatever accross this entire range. This means whether you're using 50 ohm or 70 ohm coax doesn't really matter in the broad sense because both are going to have mismatches from optimum impedance most of the time.

Too bad this traditional morse myth has no examples
to be based on. You want hundreds of thousands
of hams to learn morse code "just in case" such a
situation might arise. Even the FCC doesn't buy that
argument.

Cheers,
Bill K2UNK

As usual Jeff, you exaggerate the role that knowledge of
the other modes you mention actually plays in testing.
You know full well that there is NO separate testing of any
one of those modes as there is for CW. You know full
well that a test taker can miss all questions on one
or more of those modes and still pass the written test.

Cheers,
Bill K2UNK

>letter writing campaign...

I think the obvious problem with this debate is that apples and
oranges are being argued.

A LEO with a warrant can enter a home to search for evidence of
a crime _without_ either the permission of the owner OR any proof that
the owner had the evidence on the premises (assuming s/he can convince a
judge that probably cause to believe the evidence is present does
exist). Thus if someone is suspected of committing a homicide, his/her
home can be searched for the murder weapon without any proof that the
weapon has _ever_ been on the premises.

An FCC official, on the other hand, cannot demand that the
station equipment be made available for inspection unless s/he can prove
that illegal activities occurred at that location. In other words, an
FCC official can view an antenna connected to a building, have reports
in his/her hand by other users of the frequency that specific offenses
had occurred, but still not demand access to the equipment unless s/he
actually detects a radio transmission originating from the location _at
the time._

These are _not_ equivalent situations. In the first case, the
existence of the evidence is pure conjecture based on the facts of the
crime; in the second case, the transmission could _not_ have occurred
unless the equipment (evidence) was on that site and in use at the time.

Thus the correct comparison is not to a LEO with a search
warrant, it is to a LEO who witnesses a crime being committed in which
immediate action is necessary in order to preserve the evidence trail.
In such a case, a warrant is not required for entry.

In the case of the FCC, because they lack the legal status of
Law Enforcement Officers, they cannot force entry to prevent the
destruction of evidence (i.e., removal of the illegal equipment). But
having evidence of the commission of the offense, if the resident
refuses them permission to inspect the equipment (and thus to confirm
that it is _not_ illegal which would end the matter immediately), the
burden of proof immediately falls to the resident to demonstrate a
compelling reason why the station could NOT be inspected.

The comparison would be far more accurate if made to the right
of a LEO to require a test for intoxication when s/he observes a
motorist driving in an erratic and apparently intoxicated manner. Most
states have laws that require the suspension of the driver's license of
any driver who refuses such a test since one condition of driving on the
roads of the state is that the driver provides tacit agreement to submit
to such a test.

1003. Hawaii Afternoon Net (HAN)

Newsgroup: rec.radio.amateur.misc
Date: 1999-10-19 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <7ugvildmm1@news.hawaii.edu>
Source record: 129435

The Hawaii Afternoon Net (HAN) will resume regular 75 meter testing on Saturday November 6 at 4 PM local using 3888 khz LSB (HAN's alternate frequency). Testing will be informal but will operate under direct NCS control. If operations are usable, the entire net session will remain on 3888 khz.

If conditions are marginal, the net will QSY to 7088 khz LSB (HAN's primary frequency) at approximately 1615 local.

All stations are requested to make maximum effort to use 3888 khz on this date.

This session (and EVERY session of HAN) is open to all Hawaii amateurs, and all check-ins are always welcome. To check in, come up on the proper frequency and follow NCS instructions. The net meets 365 days a year at 4 PM, normally on 7088 khz.

(Note: All times are HST = UTC - 1000)

Net manager is Warren KH6WM, kh6wm@arrl.net.

I have an FT-2600M that I purchased in July and I haven't had
any problems with it at all.

While it's not quiet up with my FT-8100R in terms of features,
it's a _very_ solid rig, runs cool, and has plenty of power and features
for most any application. I haven't used it for packet (the FT-2600M is
in the car and the FT-8100R is in the shack) but hams I've heard from
say it does an excellent job there, too.

The ability to selectively set each memory channel to display
either the Alpha label _or_ the frequency is particularly valuable,
since it allows common local repeaters to be instantly identified while
leaving the frequencies of temporary or non-repeater memories displayed.

Overall, I can recommend it _very_ highly--it's by far the best
2m only FM rig I've owned.

Hope it helps,

Rick

Source record: 129437

In case you were wondering------propagation comes to the east coast on 80 meters much earlier than the west. It's a matter of the earth rotation and your location. Sid and his cohorts may well have been on at 4:00PM PST. which is 3 to 4 hours behind the east coast. With the dinky signals out of the west due to propagation, Sid and his co-conspirators could not even be heard. But due to the ability and technical know how of the participants on the east coast, we were able to send massive signals out to the west coast. Sorry folks, but the left coast always get the short end in the early evening due to forces beyond our control---propagation.
The east coast loses in the early morning when the west is still in prime propagation
And believe me when I type that if anyone had the frequency at that time, I would not have participated in any discussion on 3950 and would have yielded to the rightfull occupants. It was that I could not hear even one peep from anyone on the frequency when I got on.
Tim, if I heard you were on the air, I would have left-----it would have been your frequency. It was just that there was no signals present when I got on with W3KE.
You folks out west should really get someone out east to record your signals. You people---yes you people-----(K5ZUism)
have no idea that you cannot be heard until
the west gets dark. You could have been on for 10 hours before we got on. If you cannot be heard-----you are not there. The frequency is open as far as the east coast is concerned.

If you refuse, then there is *no* need for an inspection. You're then guilty of violating the conditions of your license. They have you either way, Bill. Pay up.

Back to the CIB web page:

Q: The FCC Agent standing at my door does not have a search warrant, so I don't have to let him in, right?

A: Wrong. Search warrants are needed for entry involving criminal matters. One of the requirements as a licensee, or non-licensee subject to the Commission's Rules, is to allow inspection of your radio equipment by FCC personnel. Whether you operate an amateur station or any other radio device, your authorization from the Commission comes with the obligation to allow inspection. Even radio stations licensed under a "blanket" rule or approval, such as Citizen's Band (CB) Radio, are subject to the Commission's inspection requirement.

In the cases publicized here in Hawaii, a US deputy marshal accompanies
the FCC agent, and it's the marshal who forces entry. Latest case was
a pirate broadcaster. The marshal cut through the locks. The bad guy
lost all his equipment, including even the antenna and feed-line.

Come ON people... Let's stop this assinine once-every-fifty-years
bullshit arguement. If you can't justify CW with a better arguement
than this, stop trying!!

No one believes it. It Bullsh!# to begin with. And it even pisses off
the procode people.

All this senseless bickering, with arguements as lame as this, does is
further polarize people into pro and anti CW. The writing is on the
wall, like it or not, the CW requirement is going to go.

And as someone who still has a Swan decked out with dual VFOs and
the only input device EVER used on it since I got it in 1981 is a
straight
key, I'm scared to death that these pointless arguement, with lame
excuses
like the above, are going to cause a backlash that will cause the CW
subbands to ALSO go when the requirement goes.

So get real! Get a life! CW is fun, but it won't save your life! As a
mode it needs and deserves to have protected bandspace. But as a
requirement it's nothing but elitist BS for people who can't justify
anything else other than bragging they they run CW better than
someone else.

Still haven't taken the time to see a psychiatrist, eh Lloyd?
I recall that this newsgroup was subjected to an episode similar to
N0VFP's return several months ago when Drew "CBRAMBO" Durigan left the NG for a
brief period, then returned without being asked. Therefore, it seems
reasonable to assume that Lloyd is still afflicted with the delusion that he is
CBRAMBO, in addition to his usual paranoid delusions.
Go play in traffic, Lloyd, no one wants you posting your claptrap here.
Save it for your religious wacko buddies.

> Yet you offer no such reasons here.

1. Morse can be decoded by ear with no additional electronic equipment.

2. Morse allows the exchange, albeit basic, of information between two stations who speak different languages. Some may have a hard time understanding a Spanish speaking operator describing his station in Spanish but I would understand completly:

Name HR is Juan, QTH Juanajuato, UR RST 579, WX HR 24C, RIG Kenwood ES ANT Yagi ES dipole, PWR 35W

If he said this in Spanish would you understand it? Perhaps, if you speak Spanish.

Bueno, mucho gusto y gracias por tu llamada, tu senales esta mubien aqui, mas or menos cinco seiz o cinco siete, yo vivir norte de la ciudad Juanajato y mi nombre is Juan. Entonces Bill? Entendiste?

While the information exchange may be simple it DID allow a contact that would have otherwise not been possible. I believe this one falls under the catagory of promoting international good will.

3. It allows quick identification of repeater systems that ID in morse as well as which input your on when multi-receiver repeaters ID the receive site in morse. Notice that police, fire, and ambulance used to all ID in voice by the station attendant, now allmost all have switched to automated morse ID's. This also allows the repeater to ID while a converstation is going on.
I suppose you could ask if your tuned to the correct repeater, but it seems silly since the information was just sent in morse.

4. It allows communications between two stations when SSB signals may not be copiable.

5. Using a 250 Hz filter you can fit more operators into 3 KHz than you could using SSB. Thus more efficient use of the band during crowded conditions.

6. Since building IS a part of our hobby we shouldn't ignore the fact that a CW transmitter can be built using the most basic circuits, A single transistor transmitter with an output of 1 w or so allows the beginner an oportunity to build and put something on the air, an SSB transmitter may be too difficult for

the beginner looking for his first project. Of course if no one on HF knows morse this opportunity goes away. Yes we need to advance the state of the art but does the Novice or entry level ham with no building experience start by building a DSP based tranciever?

7. I'll grant you that many digital modes have a better and faster throughput and work better under noisey conditions but then consider how many contacts could you make using Clover vs the number you could make using morse. That is to say, how many HF ops are active using Clover vs morse? After all communicating is what it's all about right?

In my opinion, these are some good reasons for keeping morse, I can't think of any good ones for why it should be eliminated.
Wayne Green attempted to tell us how many RF Engineers, microwave specialists, and technical guys we would draw to the hobby but morse was keeping them out. We dropped it on VHF and above, where are they? Actually Bill I don't really care that much one way or another if they drop the requirement for HF, it won't effect my operation or enjoyment of the hobby, but I do disagree with the arguments that morse has no value to the hobby.

>propagation
>

[...]

Exactly. I suspect that natural propogation conditions play a major role in the 3950 occupancy wars. Everyone knows (or should know) that higher HF frequencies propogate better during the day, while lower frequencies propogate better at night. High sunspot levels (like we have now) tend to keep the high HF freqs open even into the night, but the lower HF freqs are usually not open for cross-country comms during the day.

As the sunset "gray line" advances from east to west over the continent, stations to the EAST of the gray line will start being heard out west BEFORE sunset occurs in the west. The effect is reversed at sunrise, with western stations being heard out east after sunrise. These effects can be heard quite dramatically on the standard AM medium wave broadcast band, by the way.

So it is quite possible, and even probable,
that Sid's QSO could not be heard out east. Therefore, NOBODY is at fault here.

The only question that remains is ... who has to move when both QSOs finally hear each other?? Does the FCC have any guidelines on this?

You'd better read the charter for the ham radio service. Emergency
communications is only one several features of this service. It is
not, nor has it ever been a "primary" function.

>2. Morse code is another method of ham radio.

Method of what? Morse code is a code. On-off keying is the
modulation. The abbreviations and signal codes we layered on top of
the medium are useful for other low bandwidth character based
communications too. What's your point? It is not part of the charter
of our service. So where does it say that morse code proficiency is
necessary for ham radio to exist?

>3. IF WE DIDN'T KNOW HOW TO TALK, WE WOULD BE TESTED ON SSB/AM/FM
>ALSO!!!

Maybe we should test for reasoning abilities too?

>Now does it make any sense to you no-coders?

No, it doesn't. I'm an extra-class licensee, only a few months away
from eligibility in QCWA. I still can't figure out why so many are so
attached to the code that they insist on it being a prerequisite for
becoming a ham.

>(Learned much about the Code from my famous post last Spring - "Morse

Jeffrey Herman wrote
>In the cases publicized here in Hawaii, a US deputy marshal accompanies
>the FCC agent, and it's the marshal who forces entry.

The Marshall likely had a warrant. It's a *constitutional protection*, even from the federal cops. There are some legal exceptions to a warrant. For example if the officer can see a body inside the house they can force entry to give aid. (However once they determine it is a crime scene, they must back out, secure the scene, and get a warrant.) Another exception is fresh pursuit. The bad guy, running (with the cops close behind), can't just run into his house and say kings-x. But the amateur radio station inspection rule is certainly not an exception. If you refuse entry, unpleasant things may later happen to you in court, but absent a warrant, you *can* refuse entry to your home...

Tim,

You're clouding the facts. NO ONE is talking about getting rid of
Morse, other than that is EXACTLY what will eventually happen
(in my opinion) as a result of all the BS about pro and anti code.
They are talking about getting rid of it as a qualifier, but you won't
even acknowledge that fact.

As the Wayne Green's comment you seemed so proud to quote.
Let me just point out the astronaut corps. How many were HAMs
prior to novice enhancement? How many are HAMs now? And
just to tickle you interest, how many have had a license BEYOND
tech or tech plus at the time of ANY space flights?

There HAS been a flood of engineers to HAM radio. You just
don't notice, because they aren't where you see them. There are
4 HAMs here where I work. Only TWO are active with voice,
and I'm the only one who at least was active on CW.

Let Morse stand on it's own. It will survive. But it WON'T
survive as long as the bickering goes on, and people are turned
off to it because of elitist attitudes and arguements that make
some people almost ashamed to say they're on that side of the
arguement. And when the 'requirement does go, and it will
eventually, you'd better hope there are enough CW people out

there to maintain a hold on the CW subbands, ot they will go shortly thereafter.

The discussion shouldn't be about keeping CW as a requirement. It should be about how to maintain the CW subbands. The first thing that will happen, in my opinion, is the CW subbands will be 'consolidated' to single speed bands. But in a spectrum tight environment, do you think they'll keep them all there, just open them up? Think about it, they'll probably cut them back, and then back again, and then...

Howdy, Folks.

This is an open invitation to browse http://hfradio.org, the NW7US Ham Radio and Shortwave Radio Resource Website.

This non-commercial site offers:

+ Azimuth Map / Equidistant Map Creation (choose any QTH as center, many options

+ Propagational Resources (live, real-time reports, eAlert service (sign up for automatic email solar/geo reports, complete with Aurora index))

+ News, and DX information and reports

+ QSL Manager and Callsign Lookup center

+ Swap and Shop

+ FREE HOME PAGES THAT YOU CAN USE TO POST YOUR OWN HAM OR SWL SITE

+ Bookstore - SWL and Ham related books. Over a 1000 titles so far.

+ Plus more (Directories, etc.)

This is my offering to the community, all funded by me. I am working hard to bring excellent content to the site. I have need for others who might wish to assist. I need a Software editor -- someone who can review and post software links, etc. Let me know if you are interested. (See the site on how to email me).

If you feel up to it, after looking around the site, drop me a note (you'll find my address on the site) and share your thoughts.

73!

So what? English is instantly recognizable by
the vast majority of hams yet it isn't a requirement.

>2. Morse allows the exchange, albeit basic, of information between two stations
>who speak different languages.

Morse myth number ?
Just what or who gives a hoot about exchanging such
information beyond the two people involved in a QSO.
The ability to exchange such rudimentary info is of
no importance in the analysis of why anyone MUST know
morse code for HF access.

>Some may have a hard time understanding a Spanish
>speaking operator describing his station in Spanish but I would understand
>completly:

Wonderful for you.

>Name HR is Juan, QTH Juanajuato, UR RST 579, WX HR 24C, RIG Kenwood ES ANT Yagi
>ES dipole, PWR 35W

And the importance of this info exchange is what?

>If he said this in Spanish would you understand it? Perhaps, if you speak
>Spanish.

He is sending in English. Name, RIG, ANT, dipole are all English
language words.

>Bueno, mucho gusto y gracias por tu llamada, tu senales esta mubien aqui, mas or
>menos cinco seiz o cinco siete, yo vivir norte de la ciudad Juanajato y mi nombre
>is Juan. Entonces Bill? Entendiste?

Yo quiero Taco Bell.

>While the information exchange may be simple it DID allow a contact that would
>have otherwise not been possible. I believe this one falls under the catagory of
>promoting international good will.

There is no such requirement of anyone to engage in
or otherwise do such. Part 97 identifies such goodwill
efforts as a goal of the service...NOT a requirement.

>3. It allows quick identification of repeater systems that ID in morse as well as
>which input your on when multi-receiver repeaters ID the receive site in morse.

Great example. Too bad such code knowledge is
NOT needed by hams which are, by license
class, limited to bands where the great majority
of repeaters are to be found...YET those same
hams have no knowledge of code to identify
the repeater ID anyway.

>Notice that police, fire, and ambulance used to all ID in voice by the station
>attendant, now allmost all have switched to automated morse ID's.

There is NO CW ID requirement for non-ham repeaters as far
as I am aware. Indeed, why would there be and why would
a ham have to ID such repeaters anyway?

>This also
>allows the repeater to ID while a converstation is going on.
>I suppose you could ask if your tuned to the correct repeater, but it seems silly
>since the information was just sent in morse.

I never pay any attention to such morse IDs.
The English language ID is all I need and all I
have ever needed.

>4. It allows communications between two stations when SSB signals may not be
>copiable.

So does many other digital modes.

>5. Using a 250 Hz filter you can fit more operators into 3 KHz than you could
>using SSB. Thus more efficient use of the band during crowded conditions.

So do other digital modes.

>6. Since building IS a part of our hobby we shouldn't ignore the fact that a CW
>transmitter can be built using the most basic circuits, A single transistor
>transmitter with an output of 1 w or so allows the beginner an oportunity to
>build and put something on the air, an SSB transmitter may be too difficult for
>the beginner looking for his first project. Of course if no one on HF knows morse
>this opportunity goes away. Yes we need to advance the state of the art but does
>the Novice or entry level ham with no building experience start by building a DSP
>based tranciever?

Assuming your premise to have an element of belief,
you ignore the fact that no one is saying that beginners
should not be allowed to do any of what you describe
above. No one is saying "Do not use code."
The issue is the code TEST requirement...NOT code
use.

>7. I'll grant you that many digital modes have a better and faster throughput and
>work better under noisey conditions but then consider how many contacts could you
>make using Clover vs the number you could make using morse. That is to say, how
>many HF ops are active using Clover vs morse? After all communicating is what
>it's all about right?

Mandatory requirements (the CW test) is what the issue
is about. There is NO such requirement that anyone use
CW at all. No one MUST respond to any QSO at all...
not to a Clover, a CW, an SSB, etc.

>In my opinion, these are some good reasons for keeping morse, I can't think of
>any good ones for why it should be eliminated.

No reasons are needed to eliminate the test. The burden
of proof is on those that want to retain the requirement.
That is always the responsibility of governemnt to justify
the laws, rules and regulations that government establishes.
Clearly the FCC understands that and has, via the NPRM 98-143,
asked the basic question as to the continued need (justification),
if any, for code testing to continue. The ONLY supporting
argument that the FCC identified up front was the
existence of the treaty (ITU) requirement for
code testing...BUT the FCC knows full well that 5wpm
fully meets that treaty obligation.

>Wayne Green attempted to tell us how many RF Engineers, microwave specialists,
>and technical guys we would draw to the hobby but morse was keeping them out. We
>dropped it on VHF and above, where are they?

Frankly, that's not an issue or argument needed at all.

>Actually Bill I don't really care
>that much one way or another if they drop the requirement for HF, it won't effect
>my operation or enjoyment of the hobby, but I do disagree with the arguments that
>morse has no value to the hobby.

Morse has value to the individuals that want to use it.
No one disputes that. The issue is the requirement, not
the use by anyone.

Cheers,
Bill K2UNK

The FCC Inspector does NOT have Police Powers, and needs a Federal
Marshal,
(on Land) or a USCG Officer (aboard ship) to provide Police Powers to
conduct entry and sezure actions. If he is refused entry, he can have
the License Revoked, and Fine or Forfeture Imposed, but these are all
after the fact penalties, and must be approved by HQ in DC before
imposition. When there is
a liklyhood of refusal and the case demands imeediate action, the
Enforcement
Officer is dispatched with the Inspector, and when the Inspector
certifies to the Enforcment Office that there is Probable Cause that a
Violation is currently happening or has happened in the very recent
past, then the Enforcemnt Officer does the entry and it is by His
authority that any search and or sezure takes place, with the Inspector
acting as a technical advisor to the Enforcement Officer. Been there,
done that!

Well my intent was not to cloud anything, but that's fine. I'll be happy to acknowlege that the intent is to eliminate it as a requirement, and in response to Bill's comment I listed some reasons I think it should continue as a requirement. I didn't think I had to acknowlege that fact since I thought that's what the topic was to begin with.

> As the Wayne Green's comment you seemed so proud to quote.

I don't know the answer to your specifics about license classes and who did or didn't upgrade. I am thankful to have as many hams in space as we have had although I'm not sure that this is representative of the ham community in general, did these astronauts just up and decide to become hams after the license change went into effect or did SAREX/ARRL approach them specifically so that we could have some activity from the shuttle? I don't know but I suspect the latter as there has been an unusually high number of astronauts with new ham tickets. I think it's great they were licensed but again I'm not sure that it's a good example for this particular discussion.

I have no problem at all with the no code for VHF and above, and many argue that many of these go on to get General and higher class licenses, but that only tells me that the morse wasn't the factor keeping them out otherwise they wouldn't have bothered to upgrade.

1037. AL80A Info Please

Newsgroup: rec.radio.amateur.misc
Date: 1999-10-19 00:00:00 UTC
From: tbone107@aol.com
Message-ID: <19991019163149.04379.00000012@ng-cb1.aol.com>
Source record: 129469

I've had an Ameritron AL80A for about 8 years and for various reasons have used it only 5 or 6 times and only on 40m (phone and RTTY) and 160m (phone and cw).

Now that I've moved to a less offensive neighborhood (meaning I'm less likely to offend the neighborhood with RFI) I want to get to using it more often.

IGNORANCE ALERT!!!

Can the AL80A be used in FM? The manual mentions SSB and CW, providing power ratings for each. While I know for tuning purposes one needs to excite the amp with a carrier, but the manual doesn't even mention AM. The term "all mode" appears nowhere. I'm certain AM is ok, but what about FM?

Now that conditions are
(kind of) improving on 10m, sometimes (most of the time) the100w from my Icom751A in the FM portion of 10m, and 50w in AM just isn't enough when conditions are marginal. A few hundred sure would be nice. It's a nice amp and I would hate to damage it through simple ignorance.

Thanking you in advance,

Packet stays out of the CW area and visa-versa now(for the most part). CW stays out of the phone sub-bands now (for the most part). When SSB was introduced, SSB stayed on low end of the phone band and AM went high. Hams have always had success using gentleman's agreements for mode sharing. Why must we have the government enforce (forced) mode sub-bands. Many other countries don't...

"Hello, pleased to meet you and thanks for your call. Yous signal is
very good here, more or less 5-6 or 5-7. I live north of the city of
Guanajuato and my name is Juan. So. Bill, do you understand?"

Si senor entiendo ... y BFD.

Actually, your Spanish grammar and conjugation could use some
work.
It should be "tu senal" not "tu senales" (I'll forgive the
lack of accents througout);
his senal "esta muy bien" not "esta mubien";
it should be "mas *o* menos" not "mas *or* menos";
it should be "yo vivo" not "yo vivir" (vivir is the infinitive);
and finally, it should be "al norte de la ciudad de Guanajuato",
not "norte de la ciudad Juanajato."

Despite your poor Spanish, there is NOTHING in the above exercise
which demonstrates ANY necessity for Morse proficiency for access
to ANY amateur band.

Anyone use that special Alaskan amateur frequency on 5167.5 kHz? Is regular amateur equipment acceptable or are there special equipment requirements?

Besides MARS and CAP the equipment manufacturers I contacted won't give out modification information to operate on that amateur frequency assignment.

> morse code for HF access.

Myth number? If you think it's a myth that when I was in Jr. High school I worked hundreds of stations in the Soviet Union, Japan, and dozens of European countries using morse then we probably don't have much more to talk about. When I received the QSL cards many wrote a nice note in English, the majority wrote very broken phrases in English leading me to believe I could have never made the contact on phone. Also you seem hell bent on why anyone MUST know morse for HF access, if we apply these same arguments to the written exam is there really anything there that one MUST know to operate an HF station? Bands, power requirements, modes etc could all be easily read off a chit sheet kept next to the radio, why test for anything?

> >Some may have a hard time understanding a Spanish
> >speaking operator describing his station in Spanish but I would understand

> >completly:
>
> Wonderful for you.

Based on the tone of your comment I believe you misunderstood me, I meant I would understand completely if it was sent in morse as shown below.

> >Name HR is Juan, QTH Juanajuato, UR RST 579, WX HR 24C, RIG Kenwood ES ANT Yagi
> >ES dipole, PWR 35W
>
> And the importance of this info exchange is what?

Oh I see, you previously posted that I listed no valid reasons to keep morse and so I did, now it's a question of the importance of the QSO?

> >If he said this in Spanish would you understand it? Perhaps, if you speak
> >Spanish.
>
> He is sending in English. Name, RIG, ANT, dipole are all English
> language words.

OK Bill, I'll grant you that but it really doesn't matter does it? RIG could very well be XY1 or AB5 or anything else, the point is the abbreviations are common in all countries and known by CW ops enabling them to share information to other stations crossing language barriers and accent barriers that might otherwise impede the contact.

> >Bueno, mucho gusto y gracias por tu llamada, tu senales esta mubien aqui, mas or
> >menos cinco seiz o cinco siete, yo vivir norte de la ciudad Juanajato y mi nombre
> >is Juan. Entonces Bill? Entendiste?
>
> Yo quiero Taco Bell.

Exactly Bill, and I'm sure this non English speaking station from Argentina would be thrilled to know you want Taco Bell, now tell me how much of the above a non Spanish speaking ham in the US would understand? Especially when spoken over the air.
That's a reason to keep the morse requirement for HF where international communications are more likely.

> >While the information exchange may be simple it DID allow a contact that would

I never implied nor stated it was a requirement, I said it allowed the promotion of international good will, which, as you stated is a goal of the service, and it allows it by crossing language barriers. Shouldn't a mode that helps us acheive our goals as a service be a requirment for those wanting to join the service?

Bruce & Debora Gordon wrote
>The FCC Inspector does NOT have Police Powers, and needs a Federal
>Marshal,...to provide Police Powers to conduct entry and sezure actions.

It's always wise to have a uniform present to avoid confusion when serving a warrant or making a scheduled arrest. Local cops here are required to do so, even when plainclothes cops are serving the warrant. "Police powers" are not always necessary in entering a building when serving a warrant. In Arizona (and most states) private citizens can and do enter buildings to serve warrants. They're commonly called "bounty hunters". (Also, private citizens (here) can arrest for most felonies and some misdemeanors in progress.)

>If he is refused entry, he can have the License Revoked, and Fine
>or Forfeture Imposed, but these are all after the fact penalties,

Which is why I wouldn't suggest that a ham refuse entry to the FCC, unless of course he's going to lose all that anyway by letting them in...

>[if] that there is Probable Cause that a
>Violation is currently happening or has happened in the very recent
>past, then the Enforcemnt Officer does the entry and it is by His
>authority that any search and or sezure takes place,

Entering a building to stop a felony in progress would be an exception to requiring a warrant. However it is usually used where injury to people or destruction of property is in progress. I think it's pretty unlikely that the average ham or CB'er will have his door kicked down these days, especially in light of the current toothless FCC letter writing campaign...

As to the average ham (who is not holding a hot mike) and finds the FCC at his door, absent a warrant, he *can* refuse entry. If the inspector forces his way in, I would advise him not to resist. Any evidence gained in an illegal search will likely be supressed.

>Bruce (semiretired powderman & exFCC Field Inspector for Southeastern
>Alaska)

The "warrant-free searches" (wink wink) for real cops were better in the old days too...

> Si senor entiendo ... y BFD.

My point was simple and straightforward I thought, Bill said I listed no valid reasons for keeping morse and presented something I though had some validity, nothing more. I wasn't looking for a lesson in grammar or spelling, it was just a simple comment on my experiences on HF communicating across language barriers using morse.

> Despite your poor Spanish, there is NOTHING in the above exercise
> which demonstrates ANY necessity for Morse proficiency for access
> to ANY amateur band.

Hmm the ability to communicate with stations in other countries where phone contacts may not be possible due to language barriers? You might not think it's important but I'm not sure how you can say it doesn't demonstrate ANY necessity for morse requirements on HF.

Tim ka8ddz

Yo entiendo el por que morse no es necesario en la banda VHF y mas arriba, pero en la banda HF en donde las communicaciones internacionales son possibles, yo creo que morse podria alludar a completar un contacto. Probablemente tu no sientas que morse tiene mucha importancia en la banda HF, pero para este tiempo yo no pienso que iliminar eso sea requirido vaya alludar a nuestro pasatiempo. Yo respeto tu punto de vista pero no

estoy de acuerdo. Es esto mejor Senor?

Yes you can, your just too stupid to know how to do it so therefore you
think it cant be done.
I have done it hundreds of times, I can show you a log book full of contacts
with non english speaking stations.

> STOP
> this silly bullshit!!&#65533; Using abreviated letter codes can be done with a
> microphone and the international phonetic alphabet too!

It's time for you to put up or shut up, tell me exactly how you accomplish
this on phone. I want you to tell a Japanese station who doesn't speak
English to change freq to 7122, now give me the same example for a station
who speaks only Polish.
Show me how this is done please because clearly you haven't thought it
through, wanna bet you don't come up with an answer?
I'll be here, when you figure it out stop back and let me know. I can't wait
to see this one.

Where'd that come from? Who wants it? Only the unmotivated desire a
classless environment.

>It would more efficiently use spectrum space
>by allowing the most used modes to use the most spectrum.

Then we keep the status quo. The two most popular modes are phone and CW.
Keep them segregated to head off any ungentleman-like behavior.

>It would represent less government regulation.

11m epitomizes that desire.

>It would put U.S. hams on an equal footing with other countries.

That runs counter to how most Americans think. And study the history --
during the early international radio conferences, the US was the *only*
country fighting for amateur radio frequencies on a worldwide basis.
No other countries wanted private radio ownership. It took lots of
arm-twisting by the US delegates (which partly consisted of ARRL
officials) at each and every conference.

>It fits in with the free market idea

There certainly are controls over "free" markets, as there should be.
Otherwise the unscrupulous take advantage of the "free."

>It allows hams to make gentleman's agreements instead of crying to
>the government for special protection.

Gentlemen's agreements work fine if everyone behaves as a gentleman;
that's no longer true on the amateur bands (witness the daily QRM
from the packet operators to the 14.1 Mc beacon frequency, not to
mention the behavior of amateurs on 14.313).

>It makes life less complicated which is always good...

If you find the current band plans "complicated," keep working at them;
they become quite natural once you're on the air for awhile.

1055. help ft8100 receive fault

Newsgroup: rec.radio.amateur.misc
Date: 1999-10-20 00:00:00 UTC
From: mark bennett <mbenne26@ford.com>
Message-ID: <380DC96E.7783F182@ford.com>
Source record: 129287

i have a Ft8100 dual band 2m/70cm with an intermittent receive fault,

it only happens sometimes when you switch it on, once on and working ok
it stays ok untill another time when you switch it on.

Fault is that the 2M receive side Fails to Receive but there is noise
from speaker as if receiver is working, and if you transmit it seems
to transmit (power pack hums and transmit bar goes across)however
so far i cannot find where or if it actually is transmitting,(i havenot
had chance to check with a meter when the fault happens)

If i change the 70cm side to receive 2M that still works fine

i have tried cold cpu reset that does not work

the only way is to keep turning the radio on and off in quick succession
until it works again

this fault seems to occur every few days

note when fault does occur all radio functions on display are normal
(there are no visible faults ie still displays frequency)

thanks in advance
MARK

Amen and Amen!

However we must understand, Hams, having passed a test to operate, can feel secure in looking DOWN at CBers who didn't, and Hams who also passed a Morse Code Test can feel secure in looking DOWN at both, CBers and Non Coded Hams, and Hams who really beeeeped fast can feel secure in looking down at EVERYONE except of his own class, ticketed before he/she. AND THEY DO

Then there are those that feel voice of any kind is sub human, some feel working satelites is good, moonbounce is fun, and for some reason, many feel a need to put down anyone not operating just like he/she. I ask you, is it about abilities, or is it just ego stroking? I have my ideas and it has nothing to do with what you know and never did.

That has been the case for years, but many of us in CB have worked
dilegently to try and prove that, NO we in CB are not like those guys on
the Ham bands.

>Bil/Vilchjo
>W7WKM
>--

Maybe I've been focusing my attention in the wrong direction, but have many US hams been suggesting that non-US hams learn English? This is new to me. Most hams seem to enjoy having contacts with non-English speaking hams, I know I do. Of course, these conversations don't go on for hours, but they are enjoyable...the thrill of the chase so to speak. Personally, I would rather have a 5 minute conversation just to copy a non-US hams basic info and have him copy mine than to have to sit back for 5 minutes listening to a fellow US ham going on and on about his weather, his radio, his antenna, his power output and nothing about anything that means anything. I have weather. I have a radio. I have an antenna. I have RF output. (Yes, there are many hams who are true conversationalists, but what percentage of your QSOs with new, previously unlogged stations go anywhere beyond this basic information? How many contacts develope into truely good conversations?) Isn't part of the fun of the hobby trying to communicate with non-English speakers? People not like ourselves? Talking to people in far away places? (Damn...there I go again...Using the words "fun" and "hobby" in the same sentence within the context of amateur radio. It's a "service" and "fun" is frowned upon). I'm sorry I wasn't paying attention. I never knew of this level of apparent expectation on the part of US hams that the world of radio amateurs should know English.

That's my 2 cents. Keep the change.

It doesn't demonstrate any need for the requirement.
The only thing it demonstrates is that if YOU or anyone
else wants to contact those stations using morse code, then
YOU and or anyone else should learn morse code on

your own to do so. There is nothing in Part 97 that
mandates the contact be made in the first place.

I want to pose the question to you. Are you a member? Do you see your membership needs being met? Yes, I am a member, but I see all that the ARRL wants to do is sit around on its duff and do nothing for the younger, codeless hams like myself. They seem to cater to the big-class contesters, making sure they get those DX QSL cards and putting blantent editorials on folks like KV4FZ who the ARRL has no right slandering.

Let me know what you think of the ARRL

>
>

My own experience with amateur radio licensing causes me to disagree with your analysis here. I apologize for jumping into the middle of this conversation, but I could not remain silent on this particular point.
I have been enamored with radios for many years. My father in law bugged me for years to get a ham license. I did not have the desire to learn the code, however. I'm not knocking CW. It was strictly a lack of desire on my part. Having two careers didn't help either. I did not feel that I would have the time to devote to code study and practice.
Late in 1992, I happened to come across some postings on the old Prodigy service in the Ham Radio and Scanner section. A guy by the name of Luck Hurder, who happened to work at ARRL HQ at the time, was spreading the word about the "No Code" ham ticket. I certainly had the desire. I had the requisite knowledge (one of my careers is advanced troubleshooting of electrical and electronic systems). Following his instructions, I studied the Novice and Tech theory. I got my Tech ticket in early 1993.
My ham career would have advanced no further, except for the intervention of some folks from my local radio club. These folks actually brought me into their homes and exposed me to HF operation. One man, in particular, exposed me to HF DX'ing. That was the bug that bit me. I have since upgraded to the Advanced class.
Although I have passed the 13 WPM test, I still get no enjoyment from CW. I definitely do not enjoy long CW QSO's. Yet I have worked as many countries on CW as I have on phone. That may sound odd, but I don't really concern myself with the mode. My only concern is to work the DX. I sometimes wonder if I would still be a no-code tech if the DX bug had not bitten. I have concluded that I still would be at that lower level. This causes me to wonder about all those people who would like to play on HF a little bit, but can't. Either they are not driven as I was or they don't have the time or inclination to learn the code.
I have heard all the arguments concerning the role of CW as being the guardian of the gates of ham radio. Somehow, it is reasoned, people who put forth the effort to learn CW appreciate their privileges more

and, therefore, are more likely to be better radio operators.
Unfortunately, this argument does not mirror my experience with amateur radio. I have witnessed some appalling conduct on the HF bands that I have never encountered on my local repeater. 75 meter phone has been especially bad for a number of years, yet all of these hams are at least General class licensees. No, CW has been a pretty poor gatekeeper for ham radio in my estimation.
The good news for HF has been the increased FCC monitoring and rules enforcement. Over the past year, I have noticed a significant decline in rules infractions. However, we still have a long way to go. I still only let my son listen to the local 2 meter repeater. I DO NOT let him listen to HF (the Generals and above). I think that speaks volumes.

Then again, any of the digital modes could just as easily convey
this information. Should we mandate testing people in the use of RTTY,
AMTOR or PACTOR?

>That runs counter to how most Americans think. And study the history --
>during the early international radio conferences, the US was the *only*
>country fighting for amateur radio frequencies on a worldwide basis.

I don't understand what this answer has to do with no sub-bands. I often compete with foreign SSB stations when working CW at the low end. Why shouldn't U.S. SSB stations be allowed the same privileges that much of the world already has?

>Gentlemen's agreements work fine if everyone behaves as a gentleman;
>that's no longer true on the amateur bands

I would estimate that 95% (or more) of the hams still act like gentleman when on the air.

>witness the daily QRM
>from the packet operators to the 14.1 Mc beacon frequency, not to
>mention the behavior of amateurs on 14.313).

Neither of which would change for the worse if there were no sub-bands.

>If you find the current band plans "complicated," keep working at them;
>they become quite natural once you're on the air for awhile.

And what did I do to deserve this flame? Were you thinking of yourself when you said hams don't act like gentlemen...

Think about it Bill the operator would have to look in the book translate
the ...- ..-- etc. into English then look up the words he wanted to send and

send in a language that he has no understanding of or knows the proper syntax to frame his responses.

Even if Both operators can send and recieve at twenty words per minute and the American operator can identify the dialect and particular language the through put would drop like a rock and if they get by all these hurdles a five minute conversation would take a hour and probably be on the intellecutal level of a two or three year old.

I am sure that there are standardized or canned responses along the line of the Telegrams in that book but that type of communication hardly justifys keeping a multi-tiered code test system of licensing or that thousand of Amateurs expend a huge amount of man-hours to learn Morse code just so they can have severly a limted or even childish level contact with a foregin operator for their log books.

My daughter and I visited several colleges from Brandeis
to Georgetown. One had a list of 178 clubs on campus. In all the
listings of all the clubs on all the campuses, there were exactly
zero ham radio clubs.

What does that tell you?

1.College students have lives 2.College students don't sit in front of
radios
because they have more important things to do, like class and work
3.Colleges
have REAL radio stations, without old farts jawing about the "double u ex"-
you know, places you can play MUSIC and not be BORED SILLY ? 4.Colleges are
not a convenient place to set up ham stations usually 5.Most hams of
college
age have their licenses through their parent's interest and the last thing
they want to do is be like them for 4 years 6.Internet or 1200 buck ham
radio- you choose 7.The average age of hams is older than most professors
are
8.ALL OF THEIR FATHERS' INCOME WILL BE GOING TO PAY FOR SCHOOL AND THEY
WON'T
BE LEACHING OFF THE FINANCIAL AID SYSTEM, EXCEPT FOR AWARDS BASED ON
SCHOLARSHIP AND THEY WON'T HAVE MONEY TO GET HAM RADIOS, HMMMMMMM ???
9.Hams
use odd terms like "lids, kids and space cadets" to which college students
have responded with an appropriated ham term "FU OM" 10.You don't get the
question pools in college- hams are academic LOSERS

It tells me you didn't visit the right schools.

Here's a _partial_ list of college ham radio clubs:

K1AD - Brown Radio Club
W1AF - Harvard Wireless Club
W1ET - Dartmouth Amateur Radio Association
W1YK - Worcester Polytechnical Institute Wireless Association
W1YU - Yale University Amateur Radio Club
W2AEE - Columbia University Amateur Radio Club
W2CXM - Cornell Amateur Radio Club
W2SZ Amateur Radio Club - Rensselaer Polytechnic Institute
WA2NPP - Rutgers University Ham Radio Club
WA3GAY - University of Delaware Amateur Radio Club
W3EAX - University of Maryland Amateur Radio Association
W3VC - Carnegie Tech Radio Club
W4AQL - Georgia Tech Amateur Radio Club
W4ATC - North Carolina State University Amateur Radio Society
WD4EOG - Clemson University Amateur Radio Club
K4KDJ - Virginia Tech Amateur Radio Association
K4RY - Auburn University Amateur Radio Club
WB4TCW - University of Central Florida Amateur Radio Club
KE4YVZ - Embry-Riddle Aeronautical University Amateur Radio Association
W5AC - Texas A & M University Amateur Radio Club
W5GB - New Mexico State University Amateur Radio Club
KC5OJY - Baylor Amateur Radio Club
W5TC - University of Oklahoma Amateur Radio Club
W5YD - Mississippi State University Amateur Radio Club
W5YM - Amateur Radio Club of the University of Arkansas
W6BHZ - California Polytechnic State University (Cal Poly) Amateur Radio
Club
W6UE - Caltech Amateur Radio Club
W6YX - Stanford Amateur Radio Club
W7YH - Rho Epsilon Amateur Radio Club (Alpha Chapter) - Washington State
University
W8UM - University of Michigan Amateur Radio Club

K9IU - Indiana University Amateur Radio Club
W9HHX - Milwaukee School of Engineering Amateur Radio Club
W9JWC - Bradley University Amateur Radio Club
W9YH - Synton Amateur Radio Club (Alpha Chapter) - University of
Illinois
W9YT - Badger Amateur Radio Society - University of Wisconsin
Wï¿½QQQ - Kansas State University Amateur Radio Club
???? - Tower Amateur Radio Club - Wheaton College
???? - University of Arkansas - Little Rock Amateur Radio Club
W2KGY - Cadet Amateur Radio Club - West Point
DKï¿½TUI - Technical University of Ilmenau
PI4TUE - Eindhoven Student Radio Amateur Club
SKï¿½BU - Radio Club of the Royal Institute of Technology
VE2CUA - Concordia University Amateur Radio Club
VE3UOW - University of Waterloo Amateur Radio Club
VE4UM - University of Manitoba Amateur Radio Society
VE7UBC- University of British Columbia Amateur Radio Society
???? - University Of Manchester

There are some pretty good schools there (i.e., Harvard, Yale,
University of Michigan, Brown, Cornell, Columbia, Rutgers). Sorry to
hear that your daughter isn't qualified for them.

Any more "brilliant" observations about ham radio?

Rick

Jealous of what?

I'm not a tech--I'm an Advanced Class who will have his Extra
next month anyway.

What do I have to be jealous of? If I want to work cw I can do
so as well as the average cw fan. I send comfortably at 25+ WPM, and
while my hearing prevents me from receiving at that speed, my computer
is quite capable of doing so for me using CW-Get (I don't send with the
keyboard, I prefer my paddles).

Jealous?

Nope.

Just not an elitist.

Rick

<< Subject: KV4FZ
From: franktodd4@my-deja.com
Date: Tue, 19 October 1999 11:48 AM EDT
Message-id: <7ui3t5fnc1@nnrp1.deja.com>

KV4FZ has been an active amateur radio operator since 1954 when he was first licensed in the Midwest as W0VXO. While working his way through college (1960-64), he spent summers teaching at several camps for the physically handicapped. He was highly successful in teaching seriously disabled campers about the potential of amateur radio. Many of these campers went on to fully qualify for their amateur radio licenses.

His father, W.B. Schoenbohm, was the founder of Courage Center in Minneapolis. Herb was a major force in pushing for the initiation of the Handi-Ham program, which is now widely recognized as the premier service organization for disabled radio amateurs. After college, Herb worked as a international sales representative for Gates Radio, Harris Corp, and Collins Radio. He sold and distributed broadcast equipment to the international market, primarily Latin America. In 1968, he moved to the U.S. Virgin Islands with the intent of better serving his customers. His wife Monika was, at that time. a service representative for Pan AmericanAirways. KV4FZ was very active in DX work and, as a frequent traveler, put many new countries on 160 meters. He was instrumental in getting Stew Perry, W1BB, the necessary countries to be the first ham ever to get DXCC on 160 meters. He also gave G3IOR the last country he need (VP2EFZ, Anguilla) for the first ever DXCC via satellite (Oscar 7).

During the 1970's, KV4FZ was able to set CQ World Wide records 160-10 in almost ever category except 40 meters. He was also very active in supporting the IARU Intruder Watch after encountering frequent yachts in the area that had acquired licenses of convenience for a fee. At that time, FCC Commissioner Margita White appointed KV4FZ as the Virgin Islands SECC. The SECC has responsibility to plan and manage the operation of radio communications resources during island emergencies. Herb fulfilled that role magnificently and was named a Virgin Island "Hero" after Hurricane Hugo destroyed most of St. Croix in 1989. Herb received this award for keeping vital communications circuits open during the crisis.) Herb also took a detailed interest in how most of these "pirates" has a close association with the so-called "service nets" on the top end of 20 meters. He joined the net and attended several of the hamfest functions. Only then did he learn how deliberate and sordid was the manner in which net members misused the amateur spectrum as a means to provide an international telephone toll

by-pass service. One of the most flagrant of all these operations was the "INTERCON" network operating, for the most part, on 14.313 MHz. Herb began detailed monitoring of their operation and intercepted many communications that were appalling to say the least. In 1979, KV4FZ listening to what appeared to be a "business connection" between WB6MID/8R1 in Jonestown, Guyana and WB6MID in Ukia, California. Herb broke in and informed the net personnel that this type of operation on an amateur frequency was illegal. Furthermore, Herb stated that their communication constituted international business communications related to funds transfers and the procurement of equipment and supplies. The net hierarchy reacted by excoriating him for his "embarrassing comments" and ignoring the violations. The net bluntly told him that the Jonestown Operation was a missionary group and that they had special permission from the Carter administration to use ham radio to further their "worthy cause". Herb persisted with his concern and was quickly declared 'PERSONNA NON GRATA" by Robert Sternberg, AA4EE, a tax attorney who claimed to be the nets legal advisor. Herb expressed his concerns to other net operators participating in the companion "Maritime Mobile Net" such as Dick Eastman, N5FX and Mike Galego, KA4MUJ. Several Maritime Net members agreed that some of the more criminal practices, such as one ringers and "maintenance charges" for providing long distance toll free connections practically anywhere in the world, must be curtailed.

Some of the net cabal hierarchy rebuffed all attempts to institute reform and a nasty power struggle ensued. Eastman and Galego were "ex-communicated" by Ruth Hoffman N4LMC, Eddie Ricca K4PT and Art Candell N4PCK. The latter began a propaganda campaign, replete with false stories and personal attacks, that promised to destroy any net opposition that sought reform. The net members objected to the lively participation of KV4FZ, KA4MUJ, and N5FX (a former net director) who frequently brought to the attention of net participants certain stations whose conduct violated the FCC and International Rules.

During the 1980's, net members began a campaign of coordinated complaints to the FCC claiming that the aforementioned three were causing willful and malicious interference to the net. N5FX and KV4FZ both received prefabricated FCC citations at the behest of the net command. Both were able to get the FCC to nullify their actions based on the fact that their constructive comments did not constitute "malicious interference" and that certain members of the net themselves were engaged in a premeditated campaign of harassment and interference.

Several members of the net were subsequently caught interfering with the communications of KV4FZ and KA4MUJ. They include K2BFI and AA5LY. AA5LY later gave the FCC, and supporters of KV4FZ and KA4MUJ, a complete and accurate accounting of the plot by disgruntled net members to "settle the score". That plan included a vigorous campaign of letter writing to politicians in Washington in an attempt to pressure them into punishing the net detractors.

N4PCK had his own reason to get even. He had known Herb while he was operating in Haiti as HH2A and was very active on the INTERCON net. Herb had learned, through his contacts in Haiti, that Candell had a serious problem. He would solicit young pre-teen boys and pay them a quarter to perform sex acts on him. A prominent Haitian administrator was told, by his son, that the young boy had been abused and sodomized by Candell. There was no arrest or trial. But the arrival of the outraged local citizenry at Candell's hillside villa dictated that Candell receive an armed escort to the airport. Candell then appeared in the Orlando, Fl area, illegally using the call HH2A/W4 and actively engaging in net activities. The net watchdogs, now known as the B.A.R.F. (The Better Amateur Radio Federation), pointed out that Candell was not eligible to use a Haitian call sign in the United States unless he was a Haitian citizen and had been granted a proper permit from the FCC.

Again the net members supported Candell and sought to silence Herb. However, the FCC ruled that Candell could no longer operate from Florida unless he obtained a valid U.S. amateur radio license. Candell later paid off a VEC in Silver Springs, Fl to fraudulently give him a passing grade on a General Class license examination. The VEC was later sanctioned but Candell was neither removed from the air nor required to be re-examined. In 1989 Candell was finally arrested and convicted of multiple incidents of child molestation. He was given a suspended sentence that was partially based upon INTERCON's assertion that he had been rehabilitated by amateur radio service in their net. (Candell was arrested and convicted again in 1994 for carnal assault on several boys between 8 and 10 years of age whom he had invited into home under the pretense of showing them his ham station. He has been institutionalized for several years but his ham license was, nonetheless, renewed in 1996 for another ten years.) In 1990, Candell continued with his plot to destroy and discredit KV4FZ in retaliation for Herb's alleged "interference" with the net's "business".Candell actively leagued with other enemies of KV4FZ such as Pat Miller,KP2J in St. Thomas, and Richard Whiten, WB2OTK. Miller supplied Whiten the so-called "proof" of a crime by playing a recorded tape on both 20 and 75 meters. Miller introduced Candell to the operator of a long distance resale service that KV4FZ briefly subscribed to in 1987. Some of the users of the CALLS (Caribbean Automated Long Line Service) system (a six digit access code system on which half the possible combinations of digits gained the caller access to a WATTS line) had been illegally abusing the CALLS scheme. Malcolm Ford had claimed losses to the tune of $200,000 and needed a scapegoat. Thereupon, it was decided that a criminal case should be manufactured against Herb, KV4FZ.

Ford needed this falsification to support his ludicrous claim that the impending bankruptcy of CALLS was not due to his inept management. Instead, it proffered that somehow Herb had caused his business to fail. This was vital to Ford because he was still salaried as the GM of CALLS even though they were in receivership. Ford's efforts failed and he was physically removed from the operation after the Federal Bankruptcy judge found him raiding the treasury and assets of CALLS.

However, all during this time, Ford was fabricating evidence in an attempt to establish a connection between CALLS financial failure and KV4FZ. Yet the Department of Justice continually refused to prosecute Herb. This resulted in even more acrimonious letters to officials and politicians in a further attempt to implicate Herb as the culprit.

Malcolm Ford, the previous owner of CALLS, was then under investigation for bankruptcy fraud. In an attempt to escape indictment, Ford hired John Ackley, KP2A, to fabricate various reports that would designate Vitelco(a local phone service), STSJ Long Lines, ITT and Herb as coconspirators who were attempting run him out of business. While this was going on, Ackley was attempting to buy the nearly defunct company for ten cents on the dollar. (Ackley failed but STSJ was able to get the company back on its feet.) Miller, Hoffman, Candell and others intensified their letter writing campaign to hundreds of politicians in Washington urging them to investigate. They even began writing letters to newspapers, claiming that politicians were shielding KV4FZ from prosecution. In these hate letters to public officials, Herb was equated with organized crime, drug trafficking, and high level political corruption. In 1991, KV4FZ was writing a hard-hitting column for the St. Croix Avis newspaper. Herb frequently attacked political corruption so it stood to reason that he might have some enemies in government. Herb had articles published about the check kiting and House Banking fraud perpetrated by the Virgin Island Delegate to Congress, Ron Delugo. Outraged and distraught, Delugo (who had designs upon becoming the next governor of the Virgin Islands) assigned a full time staff attorney (Sylvester Julian) to explore methods of pressuring the FCC, the Secret Service, and the Department of Justice into investigating Herb and "putting a 'severe hurting' on him".

However an obstacle remained in the path of their plan to annihilate KV4FZ. Some at the FCC supported Herbs activities on behalf of the amateur radio service. Additionally he was elected as Vice Chairman of the Virgin Islands Republican Committee, which made him a frequent delegate to the GOP Conventions. Furthermore, Herb was personally acquainted with President Bush. Herb's father had served on the President's Commission for the Handicapped.

Initially, each and every involved agency claimed there was not enough evidence to support a charge against Herb. Subsequent to this, John Ackley, KP2A, manufactured a list of 660 telephone calls that were prearranged to add up to $1,047 in value. This was exactly forty-seven dollars over the amount needed to achieve the threshold of prosecution. Delugo wrote threatening letters to various government agencies threatening that he would see to it that their funding was severely curtailed if he did not receive figuratively receive Herb's head on a silver platter. Ruth Hoffman constantly badgered the acting U.S. Attorney for the Virgin Islands, Terri Halpern. This continued to the point that Hoffman was finally ordered to stop harassing Halpern. However, as a Congressman to the VI, Delugo was in a position convince colleagues not to block Halpern's confirmation. Delugo reportedly told Halpirn that, unless she prosecuted Herb Schoenbohm, she would never

become U.S. Attorney. (Halprin was fired in 1992 by the DOJ for ethical lapses after the Office of Professional Responsibility investigated the severe criticism, from the 3rd Circuit Court of Appeals, that Halpern received for the "knowing use of false evidence" to secure a conviction. Nevertheless, the trial prosecutor was cleared by OPR because they were unable to prove that the prosecutor actually knew the evidence used was false.)

Herb's trial took place in April 1991 (four months past the five-year statute of limitations). Both Ackley and Miller testified, under oath, as to the veracity and accuracy of the incriminating evidence they had assisted in concocting. (Miller offered his so-called "caught in the act"tape of Herb dialing "illegal access codes". Ackley presented his list of random numbers that he verified, as a government expert witness, were all telephone numbers dialed by defendant Schoenbohm.

The puzzled and confused jury convicted Herb on all three counts of Title 18, SS 1029(a): 1,2 and 3, which is, in reality, an illegal credit card statute. This statute has been used infrequently to curb the illegal use of cloned cellular telephones. After trial, Schoenbohm with the help of Bob Sheron, W4ASX, closely scrutinized the evidence and began tracking down the parties that Ackley had claimed, under oath, that Herb had illegally called. A most amazing discovery unfolded: most of the persons contacted did not know Herb Schoenbohm or had never had a telephone conversation with him. Amazingly, they had already given statements confirming this fact to the Secret Service investigators. Most had even identified persons, other than Schoenbohm, whom had called them from the Virgin Islands during the timeframe in question (1987). Interestingly, the court refused to allow Schoenbohm to verify the numbers before trial.

The court incredibly claimed that it needed to protect the potential witnesses from pre-trial disclosure! After trial, armed with affidavits from the persons alleged to have received Herb's "illegal" calls, Herb moved for a Judgment of Acquittal not withstanding the jury verdict. The court granted the motion on all counts but one (Possession or Use of a Counterfeit Access Device). The court maintained that the Miller tape proved that something was amiss and the jury could correctly deduce from this that the law had been broken. This court decision differs from the previous decision in that the device is similar to, but not exactly the same as, a valid device and does not require the threshold of over $1000 in use. (The irony in this entire matter is that Herb freely admitted to using the service briefly in 1987. He was a bona fide customer and the total actual use amounted to $106. CALLS finally was required by the court to produce Herb's check for $104 that they had received in1987. They admitted that they did not cash the check but, instead, held it as an aid in the plot to entrap KV4FZ.) When the court vacated the judgment requiring two months prison time, Herb's detractors were enraged and, once again, began the political letter writing campaign. Now the claim was that Herb had used amateur radio in the commission of a crime and should be taken off the air. They sent the highly doctored Miller

Tapes to the FCC in an attempt to prove their incredible theory. Their letters were full of outrage over the fact that Herb had once more cheated Madam Guillotine and he still on the air making waves. Some were furious due to the fact that they had given financial support to certain political candidates and nothing permanent had been done to rid the airwaves of this "pest", KV4FZ. (Ruth Hoffman even conveyed gifts to officials at the FCC in attempt to bribe public servants. One such official, William Cross, was investigated for leaking internal information to Ruth Hoffman in the KV4FZ matter. Hoffman then disseminated this information for use in the hate campaign against Herb.)

KV4FZ then was subsequently forced to embark upon a long and costly struggle for justice. He has had to fight the refusal to renew his amateur license by demanding a hearing before the FCC. (The refusal to renew is rarely used as a procedure and has been given the title: "The FCC Death Penalty" because the entire burden of proof is placed upon the licensee.)At the first FCC hearing, Administrative Law Judge Luton ruled against KV4FZ. However, upon higher review, the FCC General Counsel refused to accept Judge Luton's findings and remanded the matter for reconsideration. The principle issue is whether or not KV4FZ had used amateur radio in the furtherance of the commission of a crime. This time the ALJ ruled that there was nothing in the evidence (The Miller Tape) that was illegal in anyway. The concluded that Schoenbohm actually was dialing ordinary and valid Virgin Islands telephone numbers. He was not entering illicit access codesto make long distance calls.

The ALJ did, however, agree with the Wireless Telecommunications Bureau (WTB) assertion that, by giving out the telephone number, in 1994, of Herb's future boss, Congressman Frazer (whom, incidentally ran Delugo out of office), Herb was violating a solicitation restriction of ex-parte rules. This was despite the fact that WTB had conceded that no actual ex-parte violation had taken place. The ALJ ruled that, by attempting to explain his conviction as a De Minimus violation rather than a crime of major impact, he was trying to mislead the trial of fact. (In administrative law, the assertion of innocence is a crime even if the accused is actually innocent! It is akin to Hobson's Choice or the Salem witch trials whereupon, if the tied woman is thrown into the pond, and she does not drown, then she must surely be a witch and, thus, must be burned to death.

Herb had been fighting the remaining count through the Federal Courts and has even succeeded in convincing the courts to severely criticize the DOJ for their handling of the case. Nevertheless, they refused to reverse the remaining conviction because of the nearly impossible to define "standard of harmless error". The appellate court ruled that the motion for Judgment of Acquittal had been filed too late even though the trial judge had granted an extension based on the emergence of irrefutable proof that the prosecution had used false evidence. As a result they were barred from considering the sufficiency of evidence

matter at this late date under the rigorous standards of Habeas Corpus review. However, a positive revelation in the latest FCC decision is that it clearly vindicates Herb on the original charge of using ham radio in the commission of a crime. It also conclusively proves that his detractors engaged in perjury before a Federal Grand Jury and Petit Jury trial.

Many on the local scene recognized the truth. The Trial Judge, The Honorable Ann Thompson, wrote a letter of support and praise on Herb's behalf. The Governor of the Virgin Islands did not simply restore Herb's government career. He elevated Herb to a position of higher authority with more responsibility to the island and a significantly higher salary. He was also employed, as a part-time field representative, on the congressional staff of newly elected Congressman Frazer.

The FCC WTB attorneys characterized these as "political jobs", unworthy of consideration as a mitigating factor in Herb's "rehabilitation"!) Although Herb had a Congressional Floor Pass, granting him direct access to the ears of the politicians, there is no evidence that he ever abused his position to lobby House members against the FCC. This is in spite of the fact that the bureaucrats inside the FCC are very much afraid that Herb might just whisper in the ear of someone who controls their finances. Because of this, Herb is not allowed to take his case to the very people who would be horrified to learn the truth about how he has been treated. These are the people who could finally put a stop to this travesty of justice. Yet, Herb's detractors are on the phone daily, pushing those in power to get him off the air, one way or another. When will the voice of reason and justice be heard?

Some of us do not like the odds and are willing to help end this fiasco. Herb's legal bills are soaring but he continues the fight. His attorney, Larry Colby (a licensed ham), has stated that when this issue gets into the proper arena, Herb will be totally vindicated. But this can only happen if Herb is allowed to fight on and get his case into the proper arena. Right now, it is still in a forum where all the rules are stacked against the licensee. When the matter gets out of the FCC, and into the D.C. Circuit Court, then the playing field is closer to being balanced. There, the Feds don't have the automatic upper hand that allows them to do what their political puppet-masters demand.

A small donation of $25, $50 or $100 will go a long way in continuing the fight for justice. There is an underlying principle that must be preserved. It is not keeping Herb on the air that drives his supporters. It is the realization that if they can deprive KV4FZ of justice then they can deprive any of us of justice. Today they are persecuting KV4FZ. Tomorrow it could be you. You could be railroaded just because somebody doesn't agree with your position on the nets, phone patching, or apple pie. Herb is working vigorously to get the funds together for his appeal. His attorney Larry Colby is attempting to get an extension of time to file exceptions. If you can help in

anyway, please contact John Dillenger, K4GFM, who is the custodian of the Defense Fund.

Message-id: <7ui3t5fnc1@nnrp1.deja.com>

KV4FZ has been an active amateur radio operator since 1954 when he was first licensed in the Midwest as W0VXO. While working his way through college (1960-64), he spent summers teaching at several camps for the physically handicapped. He was highly successful in teaching seriously disabled campers about the potential of amateur radio. Many of these campers went on to fully qualify for their amateur radio licenses.

His father, W.B. Schoenbohm, was the founder of Courage Center in Minneapolis. Herb was a major force in pushing for the initiation of the Handi-Ham program, which is now widely recognized as the premier service organization for disabled radio amateurs. After college, Herb worked as a international sales representative for Gates Radio, Harris Corp, and Collins Radio. He sold and distributed broadcast equipment to the international market, primarily Latin America. In 1968, he moved to the U.S. Virgin Islands with the intent of better serving his customers. His wife Monika was, at that time. a service representative for Pan AmericanAirways. KV4FZ was very active in DX work and, as a frequent traveler, put many new countries on 160 meters. He was instrumental in getting Stew Perry, W1BB, the necessary countries to be the first ham ever to get DXCC on 160 meters. He also gave G3IOR the last country he need (VP2EFZ, Anguilla) for the first ever DXCC via satellite (Oscar 7).

During the 1970's, KV4FZ was able to set CQ World Wide records 160-10 in almost ever category except 40 meters. He was also very active in supporting the IARU Intruder Watch after encountering frequent yachts in the area that had acquired licenses of convenience for a fee. At that time, FCC Commissioner Margita White appointed KV4FZ as the Virgin Islands SECC. The SECC has responsibility to plan and manage the operation of radio communications resources during island emergencies. Herb fulfilled that role magnificently and was named a Virgin Island "Hero" after Hurricane Hugo destroyed most of St. Croix in 1989. Herb received this award for keeping vital communications circuits open during the crisis.) Herb also took a detailed interest in how most of these "pirates" has a close association with the so-called "service nets" on the top end of 20 meters. He joined the net and attended several of the hamfest functions. Only then did he learn how deliberate and sordid was the manner in which net members misused the amateur spectrum as a means to provide an international telephone toll by-pass service. One of the most flagrant of all these operations was

the "INTERCON" network operating, for the most part, on 14.313 MHz. Herb began detailed monitoring of their operation and intercepted many communications that were appalling to say the least. In 1979, KV4FZ listening to what appeared to be a "business connection" between WB6MID/8R1 in Jonestown, Guyana and WB6MID in Ukia, California. Herb broke in and informed the net personnel that this type of operation on an amateur frequency was illegal. Furthermore, Herb stated that their communication constituted international business communications related to funds transfers and the procurement of equipment and supplies. The net hierarchy reacted by excoriating him for his "embarrassing comments" and ignoring the violations. The net bluntly told him that the Jonestown Operation was a missionary group and that they had special permission from the Carter administration to use ham radio to further their "worthy cause". Herb persisted with his concern and was quickly declared 'PERSONNA NON GRATA" by Robert Sternberg, AA4EE, a tax attorney who claimed to be the nets legal advisor. Herb expressed his concerns to other net operators participating in the companion "Maritime Mobile Net" such as Dick Eastman, N5FX and Mike Galego, KA4MUJ. Several Maritime Net members agreed that some of the more criminal practices, such as one ringers and "maintenance charges" for providing long distance toll free connections practically anywhere in the world, must be curtailed.

Some of the net cabal hierarchy rebuffed all attempts to institute reform and a nasty power struggle ensued. Eastman and Galego were "ex-communicated" by Ruth Hoffman N4LMC, Eddie Ricca K4PT and Art Candell N4PCK. The latter began a propaganda campaign, replete with false stories and personal attacks, that promised to destroy any net opposition that sought reform. The net members objected to the lively participation of KV4FZ, KA4MUJ, and N5FX (a former net director) who frequently brought to the attention of net participants certain stations whose conduct violated the FCC and International Rules.

During the 1980's, net members began a campaign of coordinated complaints to the FCC claiming that the aforementioned three were causing willful and malicious interference to the net. N5FX and KV4FZ both received prefabricated FCC citations at the behest of the net command. Both were able to get the FCC to nullify their actions based on the fact that their constructive comments did not constitute "malicious interference" and that certain members of the net themselves were engaged in a premeditated campaign of harassment and interference.

Several members of the net were subsequently caught interfering with the communications of KV4FZ and KA4MUJ. They include K2BFI and AA5LY. AA5LY later gave the FCC, and supporters of KV4FZ and KA4MUJ, a complete and accurate accounting of the plot by disgruntled net members to "settle the score". That plan included a vigorous campaign of letter writing to politicians in Washington in an attempt to pressure them into punishing the net detractors.

N4PCK had his own reason to get even. He had known Herb while he was operating in Haiti as HH2A and was very active on the INTERCON net. Herb had learned, through his contacts in Haiti, that Candell had a serious problem. He would solicit young pre-teen boys and pay them a quarter to perform sex acts on him. A prominent Haitian administrator was told, by his son, that the young boy had been abused and sodomized by Candell. There was no arrest or trial. But the arrival of the outraged local citizenry at Candell's hillside villa dictated that Candell receive an armed escort to the airport. Candell then appeared in the Orlando, Fl area, illegally using the call HH2A/W4 and actively engaging in net activities. The net watchdogs, now known as the B.A.R.F. (The Better Amateur Radio Federation), pointed out that Candell was not eligible to use a Haitian call sign in the United States unless he was a Haitian citizen and had been granted a proper permit from the FCC.

Again the net members supported Candell and sought to silence Herb. However, the FCC ruled that Candell could no longer operate from Florida unless he obtained a valid U.S. amateur radio license. Candell later paid off a VEC in Silver Springs, Fl to fraudulently give him a passing grade on a General Class license examination. The VEC was later sanctioned but Candell was neither removed from the air nor required to be re-examined. In 1989 Candell was finally arrested and convicted of multiple incidents of child molestation. He was given a suspended sentence that was partially based upon INTERCON's assertion that he had been rehabilitated by amateur radio service in their net. (Candell was arrested and convicted again in 1994 for carnal assault on several boys between 8 and 10 years of age whom he had invited into home under the pretense of showing them his ham station. He has been institutionalized for several years but his ham license was, nonetheless, renewed in 1996 for another ten years.) In 1990, Candell continued with his plot to destroy and discredit KV4FZ in retaliation for Herb's alleged "interference" with the net's "business".Candell actively leagued with other enemies of KV4FZ such as Pat Miller,KP2J in St. Thomas, and Richard Whiten, WB2OTK. Miller supplied Whiten the so-called "proof" of a crime by playing a recorded tape on both 20 and 75 meters. Miller introduced Candell to the operator of a long distance resale service that KV4FZ briefly subscribed to in 1987. Some of the users of the CALLS (Caribbean Automated Long Line Service) system (a six digit access code system on which half the possible combinations of digits gained the caller access to a WATTS line) had been illegally abusing the CALLS scheme. Malcolm Ford had claimed losses to the tune of $200,000 and needed a scapegoat. Thereupon, it was decided that a criminal case should be manufactured against Herb, KV4FZ.

Ford needed this falsification to support his ludicrous claim that the impending bankruptcy of CALLS was not due to his inept management. Instead, it proffered that somehow Herb had caused his business to fail. This was vital to Ford because he was still salaried as the GM of CALLS even though they were in receivership. Ford's efforts failed and he was physically removed from the operation after the Federal Bankruptcy judge found him raiding the treasury and assets of CALLS.

However, all during this time, Ford was fabricating evidence in an attempt to establish a connection between CALLS financial failure and KV4FZ. Yet the Department of Justice continually refused to prosecute Herb. This resulted in even more acrimonious letters to officials and politicians in a further attempt to implicate Herb as the culprit.

Malcolm Ford, the previous owner of CALLS, was then under investigation for bankruptcy fraud. In an attempt to escape indictment, Ford hired John Ackley, KP2A, to fabricate various reports that would designate Vitelco(a local phone service), STSJ Long Lines, ITT and Herb as coconspirators who were attempting run him out of business. While this was going on, Ackley was attempting to buy the nearly defunct company for ten cents on the dollar. (Ackley failed but STSJ was able to get the company back on its feet.) Miller, Hoffman, Candell and others intensified their letter writing campaign to hundreds of politicians in Washington urging them to investigate. They even began writing letters to newspapers, claiming that politicians were shielding KV4FZ from prosecution. In these hate letters to public officials, Herb was equated with organized crime, drug trafficking, and high level political corruption. In 1991, KV4FZ was writing a hard-hitting column for the St. Croix Avis newspaper. Herb frequently attacked political corruption so it stood to reason that he might have some enemies in government. Herb had articles published about the check kiting and House Banking fraud perpetrated by the Virgin Island Delegate to Congress, Ron Delugo. Outraged and distraught, Delugo (who had designs upon becoming the next governor of the Virgin Islands) assigned a full time staff attorney (Sylvester Julian) to explore methods of pressuring the FCC, the Secret Service, and the Department of Justice into investigating Herb and "putting a 'severe hurting' on him".

However an obstacle remained in the path of their plan to annihilate KV4FZ. Some at the FCC supported Herbs activities on behalf of the amateur radio service. Additionally he was elected as Vice Chairman of the Virgin Islands Republican Committee, which made him a frequent delegate to the GOP Conventions. Furthermore, Herb was personally acquainted with President Bush. Herb's father had served on the President's Commission for the Handicapped.

Initially, each and every involved agency claimed there was not enough evidence to support a charge against Herb. Subsequent to this, John Ackley, KP2A, manufactured a list of 660 telephone calls that were prearranged to add up to $1,047 in value. This was exactly forty-seven dollars over the amount needed to achieve the threshold of prosecution. Delugo wrote threatening letters to various government agencies threatening that he would see to it that their funding was severely curtailed if he did not receive figuratively receive Herb's head on a silver platter. Ruth Hoffman constantly badgered the acting U.S. Attorney for the Virgin Islands, Terri Halpern. This continued to the point that Hoffman was finally ordered to stop harassing Halpern. However, as a Congressman to the VI, Delugo was in a position convince colleagues not to block Halpern's confirmation. Delugo reportedly told Halpirn that, unless she prosecuted Herb Schoenbohm, she would never

become U.S. Attorney. (Halprin was fired in 1992 by the DOJ for ethical lapses after the Office of Professional Responsibility investigated the severe criticism, from the 3rd Circuit Court of Appeals, that Halpern received for the "knowing use of false evidence" to secure a conviction. Nevertheless, the trial prosecutor was cleared by OPR because they were unable to prove that the prosecutor actually knew the evidence used was false.)

Herb's trial took place in April 1991 (four months past the five-year statute of limitations). Both Ackley and Miller testified, under oath, as to the veracity and accuracy of the incriminating evidence they had assisted in concocting. (Miller offered his so-called "caught in the act"tape of Herb dialing "illegal access codes". Ackley presented his list of random numbers that he verified, as a government expert witness, were all telephone numbers dialed by defendant Schoenbohm.

The puzzled and confused jury convicted Herb on all three counts of Title 18, SS 1029(a): 1,2 and 3, which is, in reality, an illegal credit card statute. This statute has been used infrequently to curb the illegal use of cloned cellular telephones. After trial, Schoenbohm with the help of Bob Sheron, W4ASX, closely scrutinized the evidence and began tracking down the parties that Ackley had claimed, under oath, that Herb had illegally called. A most amazing discovery unfolded: most of the persons contacted did not know Herb Schoenbohm or had never had a telephone conversation with him. Amazingly, they had already given statements confirming this fact to the Secret Service investigators. Most had even identified persons, other than Schoenbohm, whom had called them from the Virgin Islands during the timeframe in question (1987). Interestingly, the court refused to allow Schoenbohm to verify the numbers before trial.

The court incredibly claimed that it needed to protect the potential witnesses from pre-trial disclosure! After trial, armed with affidavits from the persons alleged to have received Herb's "illegal" calls, Herb moved for a Judgment of Acquittal not withstanding the jury verdict. The court granted the motion on all counts but one (Possession or Use of a Counterfeit Access Device). The court maintained that the Miller tape proved that something was amiss and the jury could correctly deduce from this that the law had been broken. This court decision differs from the previous decision in that the device is similar to, but not exactly the same as, a valid device and does not require the threshold of over $1000 in use. (The irony in this entire matter is that Herb freely admitted to using the service briefly in 1987. He was a bona fide customer and the total actual use amounted to $106. CALLS finally was required by the court to produce Herb's check for $104 that they had received in1987. They admitted that they did not cash the check but, instead, held it as an aid in the plot to entrap KV4FZ.) When the court vacated the judgment requiring two months prison time, Herb's detractors were enraged and, once again, began the political letter writing campaign. Now the claim was that Herb had used amateur radio in the commission of a crime and should be taken off the air. They sent the highly doctored Miller

Tapes to the FCC in an attempt to prove their incredible theory. Their letters were full of outrage over the fact that Herb had once more cheated Madam Guillotine and he still on the air making waves. Some were furious due to the fact that they had given financial support to certain political candidates and nothing permanent had been done to rid the airwaves of this "pest", KV4FZ. (Ruth Hoffman even conveyed gifts to officials at the FCC in attempt to bribe public servants. One such official, William Cross, was investigated for leaking internal information to Ruth Hoffman in the KV4FZ matter. Hoffman then disseminated this information for use in the hate campaign against Herb.)

KV4FZ then was subsequently forced to embark upon a long and costly struggle for justice. He has had to fight the refusal to renew his amateur license by demanding a hearing before the FCC. (The refusal to renew is rarely used as a procedure and has been given the title: "The FCC Death Penalty" because the entire burden of proof is placed upon the licensee.)At the first FCC hearing, Administrative Law Judge Luton ruled against KV4FZ. However, upon higher review, the FCC General Counsel refused to accept Judge Luton's findings and remanded the matter for reconsideration. The principle issue is whether or not KV4FZ had used amateur radio in the furtherance of the commission of a crime. This time the ALJ ruled that there was nothing in the evidence (The Miller Tape) that was illegal in anyway. The concluded that Schoenbohm actually was dialing ordinary and valid Virgin Islands telephone numbers. He was not entering illicit access codesto make long distance calls.

The ALJ did, however, agree with the Wireless Telecommunications Bureau (WTB) assertion that, by giving out the telephone number, in 1994, of Herb's future boss, Congressman Frazer (whom, incidentally ran Delugo out of office), Herb was violating a solicitation restriction of ex-parte rules. This was despite the fact that WTB had conceded that no actual ex-parte violation had taken place. The ALJ ruled that, by attempting to explain his conviction as a De Minimus violation rather than a crime of major impact, he was trying to mislead the trial of fact. (In administrative law, the assertion of innocence is a crime even if the accused is actually innocent! It is akin to Hobson's Choice or the Salem witch trials whereupon, if the tied woman is thrown into the pond, and she does not drown, then she must surely be a witch and, thus, must be burned to death.

Herb had been fighting the remaining count through the Federal Courts and has even succeeded in convincing the courts to severely criticize the DOJ for their handling of the case. Nevertheless, they refused to reverse the remaining conviction because of the nearly impossible to define "standard of harmless error". The appellate court ruled that the motion for Judgment of Acquittal had been filed too late even though the trial judge had granted an extension based on the emergence of irrefutable proof that the prosecution had used false evidence. As a result they were barred from considering the sufficiency of evidence

matter at this late date under the rigorous standards of Habeas Corpus review. However, a positive revelation in the latest FCC decision is that it clearly vindicates Herb on the original charge of using ham radio in the commission of a crime. It also conclusively proves that his detractors engaged in perjury before a Federal Grand Jury and Petit Jury trial.

Many on the local scene recognized the truth. The Trial Judge, The Honorable Ann Thompson, wrote a letter of support and praise on Herb's behalf. The Governor of the Virgin Islands did not simply restore Herb's government career. He elevated Herb to a position of higher authority with more responsibility to the island and a significantly higher salary. He was also employed, as a part-time field representative, on the congressional staff of newly elected Congressman Frazer.

The FCC WTB attorneys characterized these as "political jobs", unworthy of consideration as a mitigating factor in Herb's "rehabilitation"!) Although Herb had a Congressional Floor Pass, granting him direct access to the ears of the politicians, there is no evidence that he ever abused his position to lobby House members against the FCC. This is in spite of the fact that the bureaucrats inside the FCC are very much afraid that Herb might just whisper in the ear of someone who controls their finances. Because of this, Herb is not allowed to take his case to the very people who would be horrified to learn the truth about how he has been treated. These are the people who could finally put a stop to this travesty of justice. Yet, Herb's detractors are on the phone daily, pushing those in power to get him off the air, one way or another. When will the voice of reason and justice be heard?

Some of us do not like the odds and are willing to help end this fiasco. Herb's legal bills are soaring but he continues the fight. His attorney, Larry Colby (a licensed ham), has stated that when this issue gets into the proper arena, Herb will be totally vindicated. But this can only happen if Herb is allowed to fight on and get his case into the proper arena. Right now, it is still in a forum where all the rules are stacked against the licensee. When the matter gets out of the FCC, and into the D.C. Circuit Court, then the playing field is closer to being balanced. There, the Feds don't have the automatic upper hand that allows them to do what their political puppet-masters demand.

A small donation of $25, $50 or $100 will go a long way in continuing the fight for justice. There is an underlying principle that must be preserved. It is not keeping Herb on the air that drives his supporters. It is the realization that if they can deprive KV4FZ of justice then they can deprive any of us of justice. Today they are persecuting KV4FZ. Tomorrow it could be you. You could be railroaded just because somebody doesn't agree with your position on the nets, phone patching, or apple pie. Herb is working vigorously to get the funds together for his appeal. His attorney Larry Colby is attempting to get an extension of time to file exceptions. If you can help in

anyway, please contact John Dillenger, K4GFM, who is the custodian of the Defense Fund.

<<FRANKIE IS WELL TRAINED STOOGE OF KV4FZ's and you can sure bet he didn't write that tripe. Schoenbohm wrote it and passed it along to his munchkin to disseminate since KV4FZ was ashamed to do it himself. Send your funds to K4GFM? He's been dead for six months. As one can see, the above twisted propaganda was written quite a while ago by the St.Croix felon and renewed in light of the fact that Schoenbohm's lawyer, Lauren "Bacall" Colby just yesterday made an impassioned speech before the D.C. Appellate Court in a hopefully vain attempt to save his client's license. And would you believe that Herbie and his dopey esquire brought up my name in court? Can you imagine these two goofballs trying to convince a judge that I tried to sway Judge Luton's decision against KV4FZ. Talk about grasping for straws. Talk about a felon and a legal eagle with a face like a beagle bringing up the most ludicrous and specious and utterly farcical arguments to keep Schoenbohm on the air. Goodbye Herbie!

That sounds like a nice homebrew transmitter project. You can get a
crystal for that frequency from any of the xtal manufacturers for about
$20. Design a crystal oscillator, and go from there.

>off a chit sheet kept next to the radio, why test for anything?

Such international contacts are there with or without a
code test requirement. If you enjoy those so much, then USE
the code...BUT that is no reason to mandate code testing.

>
>Oh I see, you previously posted that I listed no valid reasons to keep morse and so I
>did, now it's a question of the importance of the QSO?

Of course it is the importance. If all you want to do
is rack up points, contacts, DX or whatever, then that is
YOUR goal, your objective and if knowing code helps you
attain that goal/objective then you are free to do so.
Such personal goals/objectives do not, however, justify
the code TEST requirement.

>> >If he said this in Spanish would you understand it? Perhaps, if you speak
>> >Spanish.
>>
>> He is sending in English. Name, RIG, ANT, dipole are all English

Then YOU can learn code on your own to make such
contacts. The contact itself contributes nothing to
justify a mandated code test requirement.

>a service be a requirment for those wanting to join the service?

NO! If such international goodwill was of such importance
as to be the justification for morse testing, then the argument
would be far more compelling as a basis to set a requirement
that all HF hams know a second language than English.

Cheers,

God hates fags, Doc

I also want to take this time to challenge your Jewish beliefs. You are not a real Jew. Only the white people who are from England and other white races are true Jews. David J. Smith tells back in about 700BC or so the 10 Northern Tribes of Isreal were taken in captivity by the Assyrians, and were scattered to the four corners of the Earth. They settled into what is now Germnay, England, Holland, etc. History teaches that. History also teaches about a king of the Khazer's (or however they are spelled) that adopted so-called Judiasm and gave it to his people. And people like you have adopted such a religion.

Just stating some facts for Doc, who never cares to hear the true side of things.

Hope noone else was offeneded.

Sure, Jones! Whatever do we need traffic rules and speed
limits for, anyway? Everyone who has a drivers license KNOWS
that all drivers know and thoruoughly understand what it
takes to get safely from point A to B and they ALL will
always be congenial, never Road Rage their way between said
points, no matter what the provocation from all the other
smart, safety-oriented drivers who are all concerned
citizens with exactly the same things in mind. Right.

Well I'm not communicating on ham radio with "most of the population" I'm communicating with other hams, all of which untill a few years ago UNDERSTOOD morse, and no translation device was needed, at least not in my shack.

> > 2. Morse allows the exchange, albeit basic, of information between two stations

Have you ever made a CW contact on HF with a DX station? I really have a hard time imagining that you have since you don't seem to have a clue what I'm talking about. I'm not talking about sending an ambulance to Russia, I'm talking about the ability to make a contact, meet someone, share a few details about your station and do it using a mode that is common throuout the amateur community around the world. The example below is what I'm talking about. I do it everyday, have you ever done it?

> Some may have a hard time understanding a Spanish

> the international phonetic alphabet.

Uh not quite Holmes, it still requires the non English speaking station to not only know the numbers in English, but pronounce them correctly, of course that's if he wants to talk to you, if he's communicating with a French station who doesn't speak his language he now needs to know the numbers in French AND pronounce them correctly in THAT language too. Have you had your coffee yet? Here it comes... How does one use the phonetic alphabet to say the number 7225? Please please tell me how you use voice to tell a non english speaking station to QSY to 7225? Wanna bet when I send "PSE QSY

7048" the morse operator at the other end knows EXACTLY what I mean regardless of his native tounge?

> >
> > 4. It allows communications between two stations when SSB signals may not be

Who is this "most of the population" you keep reffering to? Are you talking to just anyone on your amateur gear or are you talking to licensed hams? What does "most of the population" have to do with radio communications? Most of the population doesn't know what a VFO is either, should get rid of those too?

And black and white TV's and washing machines have exactly what to do with building a CW transmitter and using morse to put it on the air? This particular paragraph had to do with starting off with no experince building, the point was that simple CW transmitters could be built successfully by a novice and put on the air to communicate using morse it had nothing to do with? your preference. If you needed to wash your clothes and knew nothing about electical work or mechanics would you start by building a simple washboard or just whip up a 4 cycle, spin dry washing machine from scratch? Get it?

Yes, I see your point now, we should convince the rest of the non English speaking amateur community around the world to speak all speak English, that would be much easier than using morse, a coded system using Q codes and other abbreviations that we all understand, uh, radio amateurs that is, we are talking about CW on ham radio right? Have you been out drinking with Masataka Noda or something? That was allways his favorite argument. Since the majority of the population doesn't know morse, we should drop it, even though the majority of the population are not radio amateurs. Yea, that's good.

> That is to say, how
> > many HF ops are active using Clover vs morse?
>
> How many people communicate at work or at the store in Morse vs speech?

You are really, really strange. Were talking about radio here, not what you say at the office or how you talk to your neighbor next door, were talking about a mode of communications on RADIO. Would you say to your co-worker at the office using "voice" communciations "Your signal is really strong, about S9, well above the noise floor"? I hope not, but that would sound pretty normal on RADIO wouldn't it? Did this accidently get posted to alt.morse.in.all.places.insteadofvoice?

> > In my opinion, these are some good reasons for keeping morse,
>
> So, then you admit that there are none.

I didn't admit anything. I simply stated some reasons I thought morse should be continued as a requirement, and tried to show a couple examples which I have personally experienced. How about you? What is your experience with morse?

Funny, Dick. For private (versus commercial) use, one class of
driver's licenses seems to work pretty well right now.

Should we have varying classes--perhaps a class that can only
drive up to 25MPH and in rural settings, another that can drive at any
legal speed but only within 50 miles of their home, another that can
drive anywhere in the US and one that can drive anywhere in North
America (and require training in horsemanship for the last two, of
course)?

I happen to believe in multiple classes of license (three,
actually)--but based on written testing not on horse-and-buggy modes
with no relevance to the ability to operate an amateur station
efficiently and within the regulations set by the FCC.

Sure.

And 3950 is operated on only by broad-minded Extras, too.

>CW operators stay in their sub bands.

14.1 MHz _IS_ in the cw sub-band.

Read the regs.

It may not be used for cw _by convention_ but that is NOT part
of Part 97.

If cw ops are so great and conform to convention so completely,
who is performing all the illegal activities on 75 meters? You _have_ to
know code to be licensed to operate there, remember?

Again, simply because cw operators don't defecate in their
feeding trough doesn't make them better ops than anyone else--nor does
it mean they don't interfere with beacons or other operations.

>Try pulling your head out of your ass...quit the whining and crying
>about learning code..and frickin live with it. The cw requirement will be
>there for YEARS..!!!

Until the current generation of hams with a modern attitude
toward amateur radio take the place of the stuck-in-the-forties set who
now pretend that cw still has value other than as a mode-of-choice for a
few hams.

> At best (for you losers) the code requirement will be lowered to 5 wpm for
>HF privileges. It'll be years and years before it'll be dropped completely.
>If you want HF without code...why wait...go by a CB radio and talk skip with
>your buddies

Not to burst your bubble, genius, but if you'd look at my call
you'd see that I'm _already_ an advanced class amateur. I _have_ HF
privileges, remember?

So do a _lot_ of EXTRAS who support the elimination of cw
testing as well.

Why would I need a CB set--I can hear all the obscenities,
jammers, and carriers I want on 75 meters where most of the 40
years-as-a ham-plus gang hangs out.

>sometimes the truth hurts

Feeling the ache yet?

>I'd rather see ham radio die a dignified death..than see it turned into
>channel 19

And I'd rather see cw die a well earned death than see ham radio
continue to fail to attract sophisticated new members because it is
stuck in the 1940s instead of being ready for a new millennium.

>without knowing russian? You CAN'T!

Shows how much you know. There is a book containing 89,500 telegraphic
numeric codes which are used internationally. That's 89,500 phrases
which break through any language barrier; only the digits 0-9 in
Morse are necessary to send any of these phrases. Sure, you could
try using those numeric codes on phone, but accents can get in the
way; you could use those codes on the digital modes, but until such
modes become as common amongst the world's HF hams as the universal
mode, CW, you'll be limited with whom you can communicate.

>> It allows communications between two stations when SSB signals may not be
>> copiable.

>Voice allows communications when MORSE is not copiable due to the fact
>that MOST of the population do not understand it.

You're bringing in the general population? They aren't licensed and don't
have SSB HF radios, so they're not part of the discussion. On the ham
bands, though, ever wonder why DXpedition QSO CW totals *always* out-
number counts with any other mode?

Every HF-licensed ham knows Morse (discounting the CB-like JA no-code
license).

>> Using a 250 Hz filter you can fit more operators into 3 KHz than you could
>> using SSB. Thus more efficient use of the band during crowded conditions.

>Which makes more sense... Hundreds of operators using the band to send
>messages no one understands, or just a few people sending messages MOST
>understand?

Hey VHFer, all the world's HF-licensed hams *do* know code.

>> Since building IS a part of our hobby we shouldn't ignore the fact that a CW
>> transmitter can be built using the most basic circuits

>Same with a black and white TV over a Color TV. I prefer Color TV. An

>rather have the machine.

Our government-mandated charter asks that we *do* learn how to build radio equipment, so here's a challenge: I'll build a CW station from scratch, and you build one for your favorite HF mode. Let's see who finishes first and accumulates the most QSOs a month from now.

>Consider how many contacts you would make using speech that everyone can
>understand rather than a secret code that only a small fraction of the
>population know.

On HF, everyone knows Morse.

>How many people communicate at work or at the store in Morse vs speech?

How many folks at work or at the store are on HF? You're out in left field.

>It also isn't required if I want to brush my teeth, what does that have
>to do with anything?

Did you forget you were the one who brought up the police, fire, and EMT
VHF operators not having to know code? If you're going to talk about VHF
operations, we *do* have a code-free license. You can be just like them.

>it should not be required on ANY band just because
>some had to learn it to get there in the past and want everyone to do it
>just because they had to.

Just about as many CW QSOs as phone QSOs -- that in itself is a pretty
good reason to know it. And with those 89,500 universal telegraphic
numeric codes, you can break through any language barrier.

>> >Morse code has NO USE OTHER than for hobby or nostalgic use. NOTHING
>> >ELSE!

>> Same could be said of SSB, ATV, SSTV, meteor scatter, et cetera.

>Television is used for more than hobby or nostalgic use.

On the ham bands, relatively few operators utilize it, but knowledge
of it is required for anyone desiring an HF license.

>SSB has nothing to do with this as you can use voice or morse code with
>it.

You'll have to clarify that statement.

>Stay with the concept of the discussion!

You're the one drifting. The topic centers around knowledge of
Morse for HF-access, and you wonder off to VHF police comms and
people at work and at the market not having to know Morse...

>> >It surely has no valid EMERGENCY use or Police, Fire and
>> >Paramedics would be using it! They do not, nor would any of us WANT

>> >them to use that if our owns lives were on the line!

>> There is no code requirement if you want to operate on VHF as those

See the (very thick) book, Universal Commercial Telegraphic Codes;
it contains 89,500 numeric codes with translations into all the
major languages. Impossible to use on phone, for understanding the
numeric code, "bo'n hai ba?i chi'n mo^.t" spoken by a Vietnamese
operator would demand that you know his language, but every radio
operator could understand ....- ..--- --... ----. .---- with
very little practice.

Opinion doesn't matter. We only answer to the FCC, and the basis
and purpose of the ARS that they've composed for us reads:

97.1 Basis and purpose.
The rules and regulations in this Part are designed to provide an amateur
radio service having a fundamental purpose as expressed in the following
principles:
(a) Recognition and enhancement of the value of the amateur service to the
public as a voluntary noncommercial communication service, particularly with
respect to providing emergency communications.
(b) Continuation and extension of the amateur's proven ability to contribute
to the advancement of the radio art.
(c) Encouragement and improvement of the amateur service through rules which
provide for advancing skills in both the communications and technical phases
of the art.
(d) Expansion of the existing reservoir within the amateur radio service of
trained operators, technicians, and electronics experts.
(e) Continuation and extension of the amateur's unique ability to enhance
international goodwill.

They mentioned that Goldwater was an amateur pilot at his funeral
but not that he was a Ham. That is politics because Hams are less
important than pilots who are demographically more affluent.

Ham Radio was not meaningless to Jean. He talked about it on his radio
program. I remember when he talked about buying small parts via mail
order from Allied Radio in Chicago. He lamented when Allied stopped
mailing out catalogs to Hams as they wanted only large commercial
orders. He remembered when, as a Ham kid, he had bought as little as
one dollars worth of components at a time.
Please read my post to this NG about Jean's Ham Convention speech.

Tim, what have you done in order to see ham radio die a dignified death? More Status Quo stuff? CW forever?Bruce/WA8ULX said he wants to "destroy" ham radio.

Larry/K3LT wants it to go to the commercial users.
What is your plan?

Brian

If you are "certain AM is ok", then you understand the reduced power for that mode.

FM, RTTY, and CW share a common mode of operation at the same reduced power level
in that amplifier.

Well Brian, I'll be glad to tell you about the radio classes I've taught in the past to promote ham radio. But then you'd say I was living in the past. Instead I'll remind you every ham in the world that is licensed on HF "knows" code. Each and every one of these hams worked hard to achieve a goal that has a great deal of value to them and to the ham radio brotherhood. We already have a HF radio service that is open to all without hard work and effort..its called CB. In my opinion..the vast majority of hams on HF want to keep some type of code requirement. On the other hand I'd say the vast majority of people who haven't, won't, or refuse to learn code, are people who have done little for the license they have and like the healthy man on welfare wants something of great value for nothing. I know there are some hams who know code that want the flood gates open...but they are in the extreme minority.

Bottom line...I will strive to retain the value of ham radio for all the thousands of hams who worked hard and achieved the goal of becoming a ham radio operator.

Bigger is not better

I'd rather see ham radio die a dignified death..than become channel 19

A question for that Bigoted Baptist boob, Lloyd the Toid Davies. What happened to your boy David Smith? I don't hear the damn lousy white extremist rat on shortwave anymore. Run out of money or run out of town? Maybe he can get some funds from that phony lousy rightwing Topeka Baptist church which N0VFP attended never thinking about Christ but instead hoping to meet just one girl who'd give him a tumble. Or then again, maybe a boy who would? Something's wrong with these crazy rightwing Baptists like Lloydy Toidy. They stink. Their philosophy stinks. They're obnoxious beyond belief and pushy to the point of disgust. A bunch of screwballs who think they speak for Christ who said to love everyone while they want to do away with homosexuals. Go immerse yourselves twice you Baptist boobs like N0VFP and come up once.

Re: alternate payment method for "free solaris"
package requested
Date:
1999/05/20
Author:
Hawke <proudhawk@uswest.net>
Posting History

Thank you.
However, this situation may prove intolerable in the short
(or long) term. Those
of us on a "limited income" (because we are students, etc)
cannot afford the
alternative methods as discussed via the telephone with
another of your
representatives (methods such as local resellers,, etc).

The problem with the "free solaris promotion" is that it is
nearly "free" for
some while not being free at all (the cost being nearly
$100.00 at the
minimum for alternative purchasing methods). Thisa
disparity cannot be
tolerated by those who cannot choose because of lack of
sufficient credit,

lack of a proper checking account, or other reasons that could prevent the
acquisition of the product under the current terms of the "promotion"

Given the nature of this problem, the widest number of recipients that may
benifit from the information are being given the oportunity to read and respond
on their own terms.

Thank you for taking the time to respond to my concerns on this matter.

I'm not convinced whether the items contained in our Basis and Purpose, as written by the FCC, are voluntary. If you choose to ignore them, then you're not abiding by the B&P; I'm sure you won't be visited by an agent and marshal, but it's really no different than breaking one of our gentlemen's agreements. The FCC entrusts us to be self-policing; you're breaking that trust by not fully abiding by S971.

Yes, dear, I am.

> Do you see your membership needs being met?

Mostly. Maybe they could send that studly lookin' President Rod over
to my place for a little 'code practice'. Girl has gotta love a
guy named Rod, doncha think? Keep Mealy Mendelmouth at home though.
He mainly looks like a weasle, probably has a short tower too.

> Yes, I am a member, but I see all that the ARRL wants to do is

You'd think the P.U.K.E. Chief of Communications would know some
Morse!

> They seem to cater to the big-class contesters, making sure
> they get those DX QSL cards

It's called being nice to who brung you to the dance.

> and putting blantent editorials on folks like KV4FZ
> who the ARRL has no right slandering.

Who is KV4FZ? Looks like that call (just like mine?) isn't in
the FCC database.

> Let me know what you think of the ARRL

I love 'em, and am thinking of offering to be centerfold in
QST. (Leonard thinks I'm naughty when I say things like that.)

Well I suppose if we look at it that way, the FCC doesn't mandate you ever get on the air,
however since promoting international good will is part of the goal of the service,
something that could enhance this should be a part of the program.

>"knows" code.

Not true!
Japan has a nocode HF license and has had it for
years.

>Each and every one of these hams worked hard to achieve a goal
>that has a great deal of value to them and to the ham radio brotherhood. We
>already have a HF radio service that is open to all without hard work and
>effort..its called CB.

Please tell us what "hard work" has to do with the
justification for any requirement. No where in Part
97 does the FCC indicate anything that supports
a need to assess "hard work," etc.

> In my opinion..the vast majority of hams on HF want
>to keep some type of code requirement.

Slight majority is more the case if one relies on
the ARRL survey done a few years back. That
support changes daily, however, as more newcomers
join the ham ranks and the long term (I did it and
so should you) hams drop into the SK realm.

>On the other hand I'd say the vast
>majority of people who haven't, won't, or refuse to learn code, are people
>who have done little for the license they have and like the healthy man on
>welfare wants something of great value for nothing.

You don't have a clue as to what makes any of us tick.
You are, like others, attempting to sterotype based on
your own, unsubstantiated opinion.

>I know there are some
>hams who know code that want the flood gates open...but they are in the
>extreme minority.

What floodgates?

>Bottom line...I will strive to retain the value of ham radio for all the
>thousands of hams who worked hard and achieved the goal of becoming a ham
>radio operator.

And so will I, but without a code test requirement being
involved.

>Bigger is not better

That isn't the issue as I measure it.

>I'd rather see ham radio die a dignified death..than become channel 19

Nor does anyone else. This is just the typical
doom and gloom scare tactic raised by you and others
when you run dry on arguments. If nocoders
were going to turn anybands into channel 19
like operation, then you'd have seen that on
VHF already. It hasn't happened there and
it won't happen on HF.

Odd too that you reference channel 19 which
is a mobile use CB channel almost exclusively.
Even the freebanders don't bother with 19 and
leave it to the driving pulic and truckers who have
no real need for great distance propogation
which some procoders say is a reason CBers
will be attracted to HF rather than VHF.

Cheers,
Bill K2UNK

Hi

It's prolly a wrong question in the right place or a right question in the wrong place but I've almost given up hope, and this newsgroup seems the most likely to at least point me in a general direction where I could follow.... So sorry if you feel I mis-posted this question to this group.

Right, so I am trying to identify the manufacturer and a model of my car automatic antenna. Unfortunatelly it has only some numbers written on it:
MB 953390
8183
It's used in a Mitsubishi Carisma '98 built in Holland.

Could anyone gimme some hints where to start to get the information I am looking for?

I'd like to do this without having to call my local dealer :)

Regards and thanks
Tom

No, we don't "demand" that anybody speak English. In fact, English is
taught in the schools of practically every industrial nation on earth.
The reason may be is that there are far more books printed in English
than in any other language, and this gives people access to them.
I rem ember in VN seeing Korean soldiers peaking to VN soldiers, in
English. No, demanding, or even expecting, is not a valid criticism.
Esperanto, there is no literature or scientific books in that language.

QST de W1AW
ARRL Bulletin 85 ARLB085
From ARRL Headquarters
Newington CT October 20, 1999
To all radio amateurs

SB QST ARL ARLB085
ARLB085 Hurricane Watch Net Tracking Jose

The Hurricane Watch Net activated today on 14.325 MHz as Hurricane Jose threatened the Puerto Rico, the Virgin Islands, and the Leeward Islands. As of 1800 UTC, the storm was reported near latitude 17.2 north, longitude 62.0 west and had just passed over Antigua in the Leewards.

A hurricane warning remains in effect for Montserrat, Antigua, Barbuda, Nevis, St Kitts, St Eustatius, Saba, Dutch St Maarten, Anguilla, the British and US Virgin Islands, and Puerto Rico. A hurricane warning also is in effect for French St Martin, St Barthelemy, and Desirade.

ARRL Virgin Islands Section Manager John Ellis, NP2B, credits the Hurricane Watch Net with providing the best information on the storm. ''All ears are focused on the Hurricane Watch Net, which provides the most accurate and up-to-the-second coverage available,'' he said. ''When these things get this close, it is extremely helpful for us to know exactly where they are and what direction they are going. Thanks to the folks on the Hurricane Watch Net.''

Ellis expects to be on the Hurricane Watch Net. He also was planning to be available on the Caribbean Maritime Mobile Net on 14.300 MHz and on 14.160 MHz passing traffic as needed. He reports that hams are monitoring local repeaters, including the 147.25 MHz machine with its ''hurricane antenna.''

Jose is moving toward the northwest near 12 MPH and this general track is expected to continue during the next 24 hours. Maximum sustained winds are near 100 MPH with higher gusts.

The Hurricane Watch Net has been taking reports from stations in the storm's track and transmitting advisories. Hurricane Watch Net participants file real-time storm and weather data, which is relayed to forecasters via W4EHW at the National Hurricane Center in Miami.

1150. Re: The NoCode International argument -- my opinion

Newsgroup: rec.radio.amateur.misc
Date: 1999-10-21 00:00:00 UTC
From: jwfrank@toad.net
Message-ID: <W9MP3.176$yt1.538@newsfeed.slurp.net>
Source record: 129158
Cross-posted to: alt.ham-radio.morse,rec.radio.amateur.misc,rec.radio.amateur.policy,alt.ham-radio.vhf-uhf

First I would like to say I have nothing against folks
operating use morse code. That being said let's look at
facts, at least in the US.
The fact is that the only segment of ham radio
with any appreciable growth is the no code technician
license. Yes, there is some growth in the extra class
but it is really very small.
Fact we are getting very few young people into
ham radio. Why? They don't want to be bothered with nor
do they see the need for learning morse code. To them it's
antiquated and an old man's mode. If ham radio is to
survive in the future we have to have new folks in it or
we will lose the frequencies we now have to powerful and
money rich commercial companies.
Yes, I know all the old saws about morse and none
of them really hold water anymore than the I had to do it
so they should have to do it refrain does. Whether we like
it or not we have to move forward or die. It's that simple.
While I don't have any stats on the average age of hams I
would expect it to be at least 50. With that average we
don't have long to dawdle around and do more arguing before
nature takes care of the "crowded bands".

I am trying to prepare my two boys (ages 11 and 13) to take their first ham radio exam.

Are there any on-line examples of the kind of text messages that will be used durring the exam and example questions that I could use as practice exams with them?

Doc, Please this passage of Bible out of the Book of Romans Chapter 1:

21Because that, when they knew God, they glorified him not as God, neither were thankful; but became vain in their imaginations, and their foolish heart was darkened.

22Professing themselves to be wise, they became fools,

23And changed the glory of the uncorruptible God into an image made like to corruptible man, and to birds, and fourfooted beasts, and creeping things.

24Wherefore God also gave them up to uncleanness through the lusts of their own hearts, to dishonour their own bodies between themselves:

25Who changed the truth of God into a lie, and worshipped and served the creature more than the Creator, who is blessed for ever. Amen.

26For this cause God gave them up unto vile affections: for even their women did change the natural use into that which is against nature:

27And likewise also the men, leaving the natural use of the woman, burned in their lust one toward another; men with men working that which is unseemly, and receiving in themselves that recompense of their error which was meet.

28And even as they did not like to retain God in their knowledge, God gave them over to a reprobate mind, to do those things which are not convenient;

29Being filled with all unrighteousness, fornication, wickedness, covetousness, maliciousness; full of envy, murder, debate, deceit, malignity; whisperers,
30Backbiters, haters of God, despiteful, proud, boasters, inventors of evil things, disobedient to parents,

31Without understanding, covenantbreakers, without natural affection, implacable, unmerciful:

32Who knowing the judgment of God, that they which commit such things are worthy of death, not only do the same, but have pleasure in them that do them.

Dr. Smith is still alive and well on WWCR, I listen to him 2 times a day.

Source record: 129165

This is a 4in. x 4in. x 4in. (12 VDC in) power amplifier.

10 watts in gives 40 watts output.
5 watts in gives about 25 watts out

Two female SO-239 standard connectors for in and out. Power is 4 pin Jones,
Male panel mount

Unit is made by Power Kits.

Works fine.

$25 plus shipping

What happens when you are on a sinking ship and you don't have this book, your code key breaks, and all you have is a microphone to call for help and no one listening nearby knows Morse Code?

As if Morse Code wasn't slow enough as is, now you have to look up how to say things from a book of MORE codes! Why do people always insist on doing things backwards or the hard way? Just open your mouth and TALK!

> people at work and at the market not having to know Morse...

The discussion is using a microphone VS Morse Code. YOU are the one changing the discussion to VHF and HF, which have NOTHING to do with which MODE is used in emergencies. What difference does what FREQUENCY the police or paramedics use? Anyway, they use both VHF AND HF! (AGAIN, NOT THAT THIS MATTERS OR HAS ANYTHING TO DO WITH THIS DISCUSSION!) The point that Police, Fire and Paramedics are able to handle emergency radio communications without knowing Morse Code shows that there is no use for it in Ham radio for EMERGENCY use, only hobby or nostalgic use.

Since you can not seem to GRASP this simple discussion, let's try this:

Pretend that there is only ONE band in the world. (doesn't matter if it is VHF, UHF or HF... perhaps it is NONE of those at all) NOW... keeping this hypothetical in mind, try to have a discussion pertaining to Morse Code versus TALKING with a microphone in emergency situations. (remember... FORGET all about FREQUENCIES and think only about the MODES!)

If being Christian means accepting the kind of bigotry you preach, then anyone with any self respect would denounce it as morally corrupt.

BTW, Masons don't denounce Christianity--that's one of your delusions.

Rick

I was not tallking about the newsgroups. Only God knows that goes on in
these things. They're like a stupid CB. Anyone can say anything they please.
I know I do.

From: mf_luder@my-deja.com
Message-ID: <7ulm3e$q9$1@nnrp1.deja.com>
Source record: 129321

While it's "illegal" to solicit contacts during a contest by non-amatur means, i.e. internet and telephone, YCCC has devised a new way: beg on your website and give a convenient list to print out. How is a list printed out and kept by your radio days before a contest any different than having the same screen up during a contest ?

I thought it was bad during Cheerleader of the Year K1ZM's reign, but this is worse. Leave it to an old fart (K2KQ) who declares upon being jammed by some guy from 3832 (probably), "I've been a ham for 41 years, I hope you live that long." There's an attitude a certified pecker who sets up shop every Monday night 2 kc down from a frequency in use should take.

It's 2.4 kc, oh "great operator FOC" LIDS.

Love from PVRC country. I'll work them on all bands just to spite you cranky

And yet, here you are.

> > Frankie Todd, that eunuch
>
> Master linguist by your own admission, it's a eunich.

Let's see if we can use a recent statement of yours:

"Impressive use of a thesaurus to employ words you might not understand
beyond the popular parlance."

How about "unmpressive use of memory to employ words you clearly don't
understand including the popular parlance."

Yeah, that's about right. Better check your dictionary.

> Then why don't you go spend this time you're wasting with your wife ?

Good question. Especially in light of the "dumb newsgroups" statement
above.

>codeless
>hams like myself.

Well I'm 37 and an Extra class. (I started out as a Tech, but I learned the
code and upgraded, did not want to wait till they passed them out with
butter-n-cheese) I see them do a lot for all classes of Hams.
I used their books and tapes to upgrade.

>They seem to cater to the big-class contesters, making sure

I'm not a contester, I'm a rag chewer. But I do use the Outgoing Buro, it's a
good deal, and the Incoming Buro is free to everyone.
As for KV4FZ, I've read the stories, and the hype, and really don't care
either way.

>Let me know what you think of the ARRL

> Perhaps your posting was improper?

I never posted to this group. He automatically collects e-mail addresses from posters to this group and sends them the spam. People use fake addresses to avoid this type of garbage and some of the messages keep going to domains I have.

>
> > I have made numerous complaints abvout this guy but his ISP,

You don't seem to understand. People post to this group (on topic) forging fake addresses using my domain names. As a result, I get spam.

>
> > If other people get spammed from him direct your complaints to

> Tell me, what positive contributions have you made to this group?

This issue has nothing to do what he has or has not done for this
group. It is about sending spam to people in violation of the
Acceptable Use Agreement of his Internet provider. The spam is
sometimes to people (like me) who have nothing to do with this group.

Schleck is a spammer, pure and simple. He is also very arrogant in
believing everybody wants his garbage. Why doen't he just post the FAQ
here so the people that want to read it can? Instead he feels it is
necessary to force the FAQ down everybody's throat.

You pointed out that the numeric codes could just as well be send
using one of the other digital modes -- sure, but then you're limiting
the number of possible people you can communicate with.

> If such a tome ever became prominent in ham radio it would be just
>as easy to send the series of numbers digitally rather than by CW.

Sure, but then you're limiting the number of possible people you can
communicate with. At least we know that almost all the world's HF-licensed
hams have CW ability; how many have digital ability is really not known.

> Speaking of emergency communications, I was profoundly interested

For each such example, there are thousands where CW was used exclusively
for emergencies.

1183. Screwdriver Antennas and Trailer Hitches [Cross-post from rec.radio.amateur.antenna]

Newsgroup: rec.radio.amateur.misc
Date: 1999-10-22 00:00:00 UTC
From: Chuck Daley <chdaley@mindspring.com>
Message-ID: <GQ5Q3.10789$9J2.52971@news4.atl>
Source record: 129181

I am about to re-mount my screwdriver for the fourth time. I have experimented with a variety of mounts, but haven't quite found something I am happy with. This is for a '93 Ford F150 pickup (extended cab) with a shell on the back. I am considering a custom trailer hitch installation as my next variant.

I would be interested in getting comments from others that have taken this approach. Pictures would be useful. If people send picture files, I will try to make them available via a website for others to see.

Direct replies, or those with attachments can be sent to chdaley@mindspring.com. Otherwise, I will look for comments here.

Thanks.

Chuck Daley

I intensely dislike those who spam newsgroups with off topic posts. All
three of these individuals have a history of posting nothing but crap that has
little or nothing to do with the thread. Happy now?
By the way, Drew, I would think that at least you should be able to spell
your own last name correctly. There's only one "r" in "Durigan" ;)

Did you ever figure out how tell the non English speaking station to QSY to 7225 using the international phonetic alphabet?

Can't be done can it, me thinks your full of "Complete Bullshit".

That's the nice part about posting anonymously, if your wrong you can just dissapear
and come back later with a new nick.

We have at least two here in Michigan, one for autos and another for motorcycles - requires two separate tests.

Jeff, your response(s) continue to be overly vague. Just enlighten us what those priveleges and restrictions are. Otherwise, all I can say is that I've talked to plenty of codeless JA's on HF. Doesn't sound all that "key word restricted" to me.

Do the motorcycle licensees demand that automobile drivers pass their motorcycle tests before getting behind the wheel of a car?

Well, I'm not a member of NCI by any stretch of the imagination, but I will admit that I entered ham radio via the no-code tech license. I am currently an Advanced class licensee. You may even be surprised to learn that I have worked as many "DXCC entities" on CW as I have on phone. I even run RTTY occasionally.
I respect your position regarding CW. I am glad that I learned the code (although I never could seem to pass 20 WPM). However, if it is so important to test an applicant's ability to send and receive in one mode, why are we not testing applicant's ON ALL CURRENTLY ALLOWED MODES?
I can understand why CW testing began. In the early days of radio, the morse code was the only means of communicating. There was no voice capability. That is no longer the case. There are a multitude of voice modes and digital modes these days, and more are being developed.
Unfortunately, I think it is ham radio that is atrophying. As a group, we seem to be obsessed with doggedly living in the past. A little nostalgia can be a good thing, but the importance of morse code in ham radio has been raised to the level of dogma. Frankly, no one has ever convinced me that CW deserves to be elevated above all other modes in importance.
Notice carefully that I am not calling for the demise of CW. I think CW should receive the same level of prominence and protection that other modes receive. CW should stand or fall on its own merits, not be artificially propped by regulation, unless we are prepared to apply the same testing requirement to the other modes.
Frankly, I do believe that continued CW testing is a deliberate, arbitrary method of excluding people from the bands. That may also be NCI's position, but rest assured that I formed this opinion on my own. I would be inclined to re-evaluate my position provided that the entire ham radio community adopted similar, stringent testing of all currently utilized modes.

Nobody is expecting anybody overseas to learn English. They are free
to choose whatever language they want to learn. And, if the indications
(the spread of English as a second language around the world) are
correct, it is obvious they want to learn English, not Esperanto.

Where the heck is all this Esperanto propaganda coming from? This is
the seventh or eighth message thread I've seen on this topic in the last
month. This has absolutely nothing to do with Amateur radio - the
message below is nothing more than an advertisement for Esperanto.

Well, there are 89,500 encoded words/phrases; many adults don't
have a vocabulary that large. But I'm not convinced spending
huge amounts of man-hours in this newsgroup is any more productive
than learning Morse.

> Then again, any of the digital modes could just as easily convey
>this information.

Sure they could, but as communicators, one of our goals should be to
have the ability to communicate with as many of the other world's
hams as possible. Limiting yourself to the non-CW digital modes
inhibits that goal.

>Should we mandate testing people in the use of RTTY, AMTOR or PACTOR?

I don't see a need for that; CW is the most common mode amongst almost
all the world's HF hams. If we invoke another skill test, there'd only
be more complaining.

I did not hear the particular incident in question, perhaps they didn't hear
you when they first came on, I don't know.

However, I have personally witnessed
dozens of incidents where the "east coast"
start QSOs on a TOTALLY CLEAR freq,
only to have you and your friends come in later and claim that you had the freq
first!

Now, either you were LYING, or propogation conditions didn't carry your signals
out east until later on in the QSO. Which is it?

Not to worry, sir. I am not aligned with anyone here. And, frankly, I fail to see how I can be considered an "anti-barf folks", since I have made no mention of that topic.

And I hardly think Mr. Serrette's demise was in any way connected with amateur radio. I'd guess that it had more to do with ongoing health problems. Given that, you are free to indulge yourself in whatever superstition you desire.

Observe that the original thread started when I answered Dr. Bildeberger's question about The Right Reverend Doctor David J. Smith. You know .. the guy who has been saying for about 11 years that the Masons will take over the world any day now.

Well back then at least he was consistent. Night after night it was the Masons. Now he can't make up his mind. One night it's the UN. Next night it's the Bildebergers. Next night it's black helicopters. Etc etc.

With all these signs of the end times, it's no wonder the dispensationalists are falling all over themselves trying to out-prophesy each other as to who will win final control and usher in the Millineum. Or Armageddon. Or whatever.

It's enough to make Dr. Bildegerger want to turn into a Jehovah Witness. Or something.

Now you run along and don't worry about a thing. And send that passage from Romans to your friend Kevin and get his take on it. I'd expect his commentary to differ noticeably from that of Dr. Rice.

Notice above that you said that "you didn't hear the particular incident". Then notice below that you that you accuse me of lying or of propagation being bad. Now, since YOU didn't "hear" the "particular" incident you certainly are in no position to make any statement or judgement concerning that at all.
It IS possible that propagation played a role. I'm certainly willing to believe that and give the benefit of the doubt.
As for an answer to your last question - the way it sounds on the recording, the answer would be "neither", and don't ever call me a liar again! LOL 73 de Tim

Correct.

>Then
>notice below that you that you accuse me of lying or of propagation being
>bad.
>Now, since YOU didn't "hear" the "particular" incident you certainly are in
>no
>position to make any statement or judgement concerning that at all.

Of course I am in a position to make a statement. I can say whatever I want to
about ANYTHING. I was not making a JUDGMENT, I was only suggesting a possible
explanation about THAT PARTICULAR INCIDENT. But obviously,
since I didn't witness it, a suggestion is all I can make.

HOWEVER ....

I can still state with absolute confidence and truthfulness that I have
PERSONALLY heard the "east cost" or "Liberty Net" (if you will) folks start
QSOs on 3950 when the freq was absolutely clear and unoccupied .. DOZENS OF
TIMES ... only to have you and your radio buddies come on freq later and claim
that you had the freq first, and that the east coast was jamming you. So,
concerning THESE INCIDENTS THAT I WITNESSED, either you and your friends were
LYING, or lack of propogation prohibited both QSOs from hearing each other
until later on in the evening.

> and don't ever call me a liar again!

I reserve the right to call a liar a liar when I think he's a liar.

have the greatest rate of growth? =:o

> Fact we are getting very few young people into
>ham radio. Why? They don't want to be bothered with nor
>do they see the need for learning morse code.

Nah, that can't be the reason. We have a no-code VHF+ license;
Morse is not a barrier. It might be due to today's youngsters not
having the person-to-person speaking skills which talking on
a radio demands.

Those youngsters, for the most part, don't want to be bothered
learning mathematics, English grammar, science, art, or music,
either.

>To them it's antiquated and an old man's mode.

I'll ask my students tomorrow what they know about the Morse code.
I'll give them a demonstration and ask their reaction. Like every-
thing else, they'll probably have no opinion one way or the other.
Some will probably think it's "neat." I'll bet you an airline
ticket to Hawaii that none will say, "It's antiquated and an old
man's mode."

During Field Day, the public always seems more fascinated with the
CW operations than any other mode.

>If ham radio is to
>survive in the future we have to have new folks in it or
>we will lose the frequencies we now have to powerful and
>money rich commercial companies.

Not HF. We gained three new bands from WARC '79, and the government
is considering giving us more frequencies. It's the V/UHF+ spectrum
which is in danger, but there is a code-free tech license available
for up there. Hence, the code test has nothing to do with losing
frequencies.

Nice try, John. 73, Jeff KH6O

<REPEAT>

<10 SECOND KEY-DOWN>

That worked fine for some 90 years. No book needed for that.

>your code key breaks,

Unlikely, but you can send Morse with just the pair of wires which
were attached to the broken key.

>and all you have is a microphone to call for
>help and no one listening nearby knows Morse Code?

Use the mic, praying the listener understands English.

>As if Morse Code wasn't slow enough as is, now you have to look up how
>to say things from a book of MORE codes!

That code book was to facilitate QSOs between operators with no
common language. Your mic will not help much if the listener doesn't
understand English. He'll get the "MAYDAY" part, but probably nothing
else, especially that most critical position report.

>Why do people always insist on
>doing things backwards or the hard way? Just open your mouth and TALK!

What if the listener doesn't understand English?

Like Bill (Vilcxjo), I am an Esperantist. I find your reaction to his note very encouraging. You have a lot in common with the Esperantists. You like meeting people.

Personally, posting one liners like Bill did is not my style, and I wonder what it acomplishes. It would perhaps be more constructive to share some of the joy Esperanto brings then to complain about the "demands" of the "ugly English-speaker."

I am not a ham - although I've long been interested in it. Every year at the Hilton Apple Fest (near Rochester, NY) I see the local Hams' booth. This summer in Berlin at the World Esperanto Congress, I saw some hams up on the roof of the convention center. My imagination started running away about whether these two groups ever contacted each other.

> to have to sit back for 5 minutes listening to a fellow US ham
> going on and on about his weather, his radio, his antenna,
> his power output and nothing about anything that means anything.

That's funny. BTW, this happens in Esperanto too. Sometimes the conversations never go past sitting around and saying how great Esperanto is. I too find that boring. On the other hand, talking about things like how one decided to learn Esperanto gives someone a place to start and often turns up other side stories which I can't imagine antena-talk would do. (Why do you have a 4 meter antena -- well, you see, I was raised by aquatic mamals and...)

> Isn't part of the fun of the hobby
> trying to communicate with non-English speakers?

While I won't defend the way Vilcxjo worded his note, I think you are swinging too far in the other direction. It is at the very least be polite to take some effort to learn to help other people talk to you. If you are an English speaker, you can do this by learning some foreign language (like French, Chinese, or Esperanto.) If you have, then congratulations.

> The reason may be is that there are far more books printed in English
> than in any other language, and this gives people access to them.

People have written volumes on why this is. I think it's unfair to try to sumarise it in two lines like this.

> Esperanto, there is no literature or
> scientific books in that language.

It was this sentence which caught my attention. Please be a little more careful about generalizations like this. Perhaps if you said "compared to language X, there is practically no literature" - or "I don't like the literature and am not impressed by the scientific books in Esperanto" - I might have let that go. However, to make a generalization like that simply shows that you haven't investigated the matter.

Thats un-American. As far as the other licenses go (pilot, drivers), there is a vast difference between a license for private use and a license for commerce. Thus we have the amateur radio license and the commercial radio license. Take your pick.

This non-commercial site offers:

+ Azimuth Map / Equidistant Map Creation (choose any QTH as center, many options

+ Propagational Resources (live, real-time reports, eAlert service (sign up for automatic email solar/geo reports, complete with Aurora index))

+ News, and DX information and reports

+ QSL Manager and Callsign Lookup center

+ Swap and Shop

+ FREE HOME PAGES THAT YOU CAN USE TO POST YOUR OWN HAM OR SWL SITE

+ Bookstore - SWL and Ham related books. Over a 1000 titles so far.

+ Plus more (Directories, etc.)

This is my offering to the community, all funded by me. I am working hard to bring excellent content to the site. I have need for others who might wish to assist. I need a Software editor -- someone who can review and post software links, etc. Let me know if you are interested. (See the site on how to email me).

If you feel up to it, after looking around the site, drop me a note (you'll find my address on the site) and share your thoughts.

73!

language.

I was more-or-less with you up until the last sentence, but what ever gave you the idea that there's no literature or scientific books in Esperanto? William Auld, a Scot whose poetry is written almost _exclusively_ in Esperanto, was nominated for the Nobel prize in literature this year, and is only one of a number of excellent authors in Esperanto (Baghy, Szilyagi, Miyamoto Masao, Kalocsay, Szathmari, Varankin, etc). And while it's certainly true that some large fraction (possibly around 90%) of the scientific papers being produced today are written in English, I know of at least one instance where someone learned Esperanto _solely_ so that he could read a work on mycology available only in Esperanto. Just a cursory search on the web using a standard search engine will find you literature, scientific and otherwise, in Esperanto (see <http://fiziko.org>, for example).

It never ceases to amaze me that people feel it necessary to exaggerate the dominance of English, when its prominence is so darned impressive without any exaggerating at all...

Just my $0.02.

I don't know if the FCC has guidelines for this scenario, but in my opinion, Common Sense has: whichever QSO is having difficulty copying, MOVE OFF! What could be simpler or fairer? If the east not only experiences no QRM but can't even hear anyone else, why should they have to move? If the west is being interfered with, what could be simpler then to move and what could be more stupid or childish than to stay---griping, complaining and jamming? Remember: INTERFERENCE is NOT illegal! Only DELIBERATE or MALICIOUS interference is. If the above scenario occurs, which party is malicious? Does it take a rocket scientist to answer?

We do have only ONE type of drivers license...unless you
wish to drive commercial vehicles. I can drive ANY automobile
and the vast majority of trucks up to around 1 ton or so
with only one license.

Actually the Scofield-thumpers are just as much Zionists as the Jewish
Zionists, and there is evidence that C.I.Scofield and Samuel Untermeyer
were acquainted with each other.

My point was not to limit ourselves to non-CW digital modes. My
point was meant as a rebuttal to the comment regarding some book called
the Universal Commercial Telegraphic Codes, which I will be the first to
admit I do not own, have never seen and do not care to own. Frankly, I
don't think many of the worlds hams have invested in such a book, so its
actual real world significance to international ham radio communications
is very suspect.
If such a tome ever became prominent in ham radio it would be just
as easy to send the series of numbers digitally rather than by CW.
Although I am a RTTY fan, it would probably be more prudent to use a
digital mode featuring error correction, which RTTY does not. That is, if
we are still speaking of important, emergency communications.
Speaking of emergency communications, I was profoundly interested
in the short ARRL film entitled "Last Voice From Kuwait". A lot of
significant military intelligence and Health & Welfare reports were
passed from behind enemy lines by a Kuwaiti ham using ham radio in an
emergency capacity. I keenly noted that he did not use CW, but an error
correcting digital mode.

John, I see that you've adopted the standard NCI position
that anyone who advocates a code test for ham radio
licensing automatically also advocates use of CW mode as
much as possible, under any and all circumstances.

Nothing could be further from the truth. That opinion is an
artifact of the extreme hatred of code communications by
many NCI leaders posting here and some who do not. On the
contrary, many if not most CW advocates DO use other digital
modes. However, our experience has shown that International
Radiotelegraph Code communications is much too valuable --to
the world, not just ham radio--, but outside the third world
ham radio is the only that still includes it.

The reasons for code's abandonment in the commercial/military world are mostly financial. There's no doubt about its value as a backup to high tech communications, but it isn't being retained as backup simply because of the financial savings involved in its abandonment.

To allow code to atrophy and die out from disuse, and particularly lack of required learning of the mode by licensees, is to delete a potentially critical tool from our communications assets. Just because SOME who would be hams are too lazy to learn it.

I doubt it also :-(

My next project is to monitor this Liberty Net Crap. haven't listened too much but I'm going to start. I would join the battle on the air, but most of the idiots on 75 don't remember the code and that's the only mode my rig has.

Anyhow, I'm going to listen. If I hear a QSO on 3950 before the net time and the net tries to run them off then I'll know. I've had experience with Sid before when I used to run the SW Traffic net and even though I don't see eye to eye with his political opinions, He was always polite to me and my net.

Since I was 10 with my novice ticket (ex KA5ERO), I have been turned off by the petty bickering in this hobby, and since I am of superior intellect to 90% of this group, I plan to take control and whip the whinners!

If being Christian means accepting the kind of bigotry you
preach, then anyone with any self respect would denounce it as morally
corrupt.

BTW, Masons don't denounce Christianity--that's one of your
delusions.

Rick >>
>>You tell him Ricky baby. But keep in mind that N0VFP is not playing with a full deck. The guy lives for the hatred preached by his SPOTLIGHTERS and 3.950 clods and KKK and American Nazis and everyone else who thinks that the white man is superior. I mean I know white men superior to other white men when it comes to intelligence, finances, chicks, etc. but to say that a white man is superior to people of color on general principles is just plain nuts. Did you ever hear of a white man successfully running a laundry? No way but around here a Chinaman named Long Dong Woo Woo has the market sewn up. Did you ever hear of white men owning and running a chain of magazine stores and kiosks? Nope. Around here they wear towels on their heads and take their cows out for a walk. Lloyd doesn't understand that in every race, religion, color etc. we find the good and the bad. And the sign of maturity is to accept it as fact instead of running a man down because of color. It's like the Negro fellow who says, "I was born black. When I get mad I'm still black. When I feel envy, I'm still black. When I hold my breath I'm still black and when I die I'm black. Now you white guys are different. When you're born you're white. When you get mad, you turn red. When you get envious, you turn green. When you hold your breath, you turn blue and when you die you turn gray. AND YOU CALL ME COLORED?

I have an ft1000mp and have wired the radio up to the computer via pkt
socket.....
the manual says that sstv can be set via user mode...
I have found that you can only use lsb and not usb which is what I want...
is there any way to set up the ft1000mp to use usb via pkt socket........

I want to drive my scooter on the same roads as the cars. Does Michigan have separate roads for each type of vehicle?

> > Does the great State of Michigan honor

I never thought I would brag on Michigan, but it seems to have a reasonable policy on licensing drivers.

> Tim

Tim, I once had a QSO from Guam with a Michigan ham. He told me that he was about 45 miles South of Detroit. I said, "45 miles South of Detroit? Thats Ohio isn't it?" I think he was a Wolverines fan or something.

No particular part, I use all the bands and talk on all of them. What planet are you from? Does your planet have certain ham bands where only Morse Code is used and others where only Voice are used? How would you be able to tell what "part of the spectrum" I use just because I don't use Morse Code? Like most, I had to learn the stupid code to get all band priviledges and then forgot the code because I never used it once after the test. About the only letter I remember are S, O, and R. (R has a sound similar to my sister's name so I never forget that sound, and the S and O are obvious to everyone, even those that never learned code.)

Perhaps they should just do it the way Air Traffic Control Towers do it
worldwide. In English. They didn't make everyone learn Morse Code to
communicate to each other, they chose plain English. And if you HAVE to
learn something, makes more sense to learn a language that you can use
in most parts of the world rather than a beep beep code that you can't
use anywhere except to a small group of Ham operators as not even all of
them know or remember it.

Understanding the word MAYDAY or even the cries for help in a language
you don't understand, you will hear that the person is in distress and
requires help. In Morse Code, emotions and cries sound no different
than any other type of message, just the same ol beeps.

> >Why do people always insist on
> >doing things backwards or the hard way? Just open your mouth and TALK!
>
> What if the listener doesn't understand English? (OR MAYDAY???)

He doesn't understand English but he took the time to learn Morse Code
instead?! Good thing the Air Traffic controll towers around the world
all require ENGLISH over Morse Code!

So, what does that have to do with ham radio? Some hams speak
Esperanto and have started a group, so what? Some ham radio operator
recommended Esperanto, so what?

You were not talking to other Esperanto radio operators in your
message - you were promoting Esperanto. And Esperanto has no more to
do with ham radio then religion, baseball, fish sticks, or Russian.
Some hams eat fish sticks, watch baseball, practice religion, and speak
Russian, also. You don't see these people promoting those items in this newsgroup.

> You are correct - no one is forcing anyone to learn any language - especially
> not Esperantists.

You wrote the above subject line, William. In that subject line, you
suggest that somebody is "demanding non-US HAMS to learn English." Your
message stated that "ALL HAMS should learn The International Language,
Esperanto..." You sure seem to be trying to force the issue. You are
certainly trying to force us to read your continious postings on this subject.

Of course the number of Air Traffic Controllers world wide who speak English is a fraction of a percent in comparison to the number of radio operators world wide and only International airports are required to have English speaking towers.

But were not talking about paid professionals for a very select job, were talking about millions of hams around the world communicating with each other, and as your suggestion points out it can not be done on phone unless both understand a common language, but it can be done using" morse. It" happens everyday in the CW bands, no need to learn English.

Damn Dwight, pants a little too tight in the crotch? The thread spun off of another that suggtested hams learn English instead of Morse (or something like that) It has as much to do with amateur radio as you want it to. Lighten up a bit eh? I believe there have been some attempts at an Esperanto Net on ham radio so it certainly DOES have something to do with ham radio.

Message-ID: <381103da.309383309@news.idworld.net>
Source record: 129194

For those of you who have been wanting a Ten-Tec Triton IV and have
decided to acquire one, here is that opportunity. This one operates
great especially since I just paid Ten-Tec $150 to repair and align
it. Unfortunately it is not cosmetic collector quality.

Ten-Tec Triton IV (540) analog HF transceiver
New final transistors
CW filter (245)
Noise blanker (249)
Deluxe power supply w/speaker and VOX (262G)
160m converter (240)
Original manuals

All pieces in VG or better condition.
Insides clean, no signs of damage or modifications.
Some worn spots on the transceiver panel with several letters/numbers
redone using dry transfers.
No panel problems with power supply or 160m converter.

No mike or key.

See pictures at
http://www.txdirect.net/users/k5jwk/Ten-Tec1.jpg
http://www.txdirect.net/users/k5jwk/Ten-Tec2.jpg

$400 invested. Asking that price OBO plus postage. Interesting
trades (not just Ten-Tec) considered. Will not split at this time.

Thanks for reading.

God hates fags, Doc

I also want to take this time to challenge your Jewish beliefs. You are not a real Jew. Only the white people who are from England and other white races are true Jews. David J. Smith tells back in about 700BC or so the 10 Northern Tribes of Isreal were taken in captivity by the Assyrians, and were scattered to the four corners of the Earth. They settled into what is now Germnay, England, Holland, etc. History teaches that. History also teaches about a king of the Khazer's (or however they are spelled) that adopted so-called Judiasm and gave it to his people. And people like you have adopted such a religion.

Just stating some facts for Doc, who never cares to hear the true side of things.

Hope noone else was offeneded.

>why are we not testing applicant's ON ALL CURRENTLY ALLOWED MODES?

Okay, let us hear your proposal for skill tests for all the allowed
modes?

> Unfortunately, I think it is ham radio that is atrophying.

Ham radio will not die. It's the *only* communications medium, outside
of shouting, in which any two operators anywhere in the world can
communicate directly without using government or commercial services.
Those same two operators don't even need to purchase commercially-built
radios -- they can build their equipment themselves.

BTW, your prediction is older than you are: In "...1922 many radio
magazines which had catered to the transmitting amateur swung away
from him, one even so far as to run an editorial ... prophesying the
end of amateur radio." (From Fifty Years of ARRL.)

>Frankly, no one has ever
>convinced me that CW deserves to be elevated above all other modes in
>importance.

I believe that understanding only comes about from working CW over a
long period of time.

>apply the same testing requirement to the other modes.

Sounds fine to me. How would you propose that be done?

> Frankly, I do believe that continued CW testing is a deliberate,
>arbitrary method of excluding people from the bands.

That might be true, for those bands total 3.75 MHz, with only about
half of that useful at any one time of the day. A potential 600 kilohams
jammed into less than two megahertz would make communicating nearly
impossible.

>radio community adopted similar, stringent testing of all currently
>utilized modes.

Your proposal for that?

Jeff

> It's a very effective auto-posting, containing excellent information.
> Few would follow a link.

Are you trying say that because "few would follow a link" that this justifies forcing the information on those that don't want it? When people post ads most people won't follow the link so it is okay to send it to people directly because you think they want it? The person with the ad also feels they have valuable information.
>
> Again, these NGs exists almost solely because of Paul.

Again, this has nothing to do with the issue of sending spam to people who don't want it. As for me, I have nothing to do with this group (or the many other thousands of groups) so why should I have to put up with this guy's spam? The info is not useful to me as I am not involved in ham radios. I am sure there are thousands of useful FAQs around the Internet but i don't want them all in my e-mail box.

If this guy knows so much about the Internet then he should know how to follow the acceptable Use Policy of his provider.

1279. Radio Receiver Conversion Question

Newsgroup: rec.radio.amateur.misc
Date: 1999-10-23 00:00:00 UTC
From: geo_06492@my-deja.com
Message-ID: <7usegmluk1@nnrp1.deja.com>
Source record: 129208

Is there a way to convert a general coverage shortwave receiver to one that can tune in to single sideband transmissions? What about an add-on beat frequency oscillator; any kits available, like from Ramsey or equiv? I ask this because it is my understanding that shortwave radio stations will be transitioning to SSB, and I'm wondering if my old Halicrafters receiver will be good for only AM band listening. Any advice would be greatly appreciated. Thanks!
